California State Library

EXTRACT

From an Act prescribing Rules for the Government of the State Library, passed March 8th, 1861.

SECTION 11. The Librarian shall cause to be kept a register of all books issued and returned; and all books taken by the members of the Legislature, or its officers, shall be returned at the close of the session. If any person injure or fail to return any book taken from the Library, he shall forfeit and pay to the Librarian, for the benefit of the Library, three times the value thereof; and before the Controller shall issue his warrant in favor of any member or officer of the Legislature, or of this State, for his per diem, allowance, or salary, he shall be satisfied that such member or officer has returned all books taken out of the Library by him, and has settled all accounts for injuring such books or otherwise.

SEC. 15. Books may be taken from the Library by the members of the Legislature and its officers during the session of the same, and at any time by the Governor and the officers of the Executive Department of this State who are required to keep their offices at the seat of government, the Justices of the Supreme Court, the Attorney-General, and the Trustees of the Library.

O. M. CLAYES, STATE PRINTER.

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, JULY 2, 1864.

VOLUME IX. Number 1.

THE LESSON OF THE HOUR.

There is a vast difference between legitimate mining and the system of stock jobbing so prevalent at the present time in this city and elsewhere. The former lies at the foundation of all industrial interests. Neither agriculture, manufactures, mechanics or commerce can exist without it. It is something legitimate, tangible. It is a real earth-delving, rock-smashing business. It has, indeed, its good and poor streaks; but when rigidly and intelligently managed, it produces as few bankrupts as any other calling. It constitutes the great industrial interest of the Pacific Coast, without which our valleys and rivers, our cities and towns, would soon fall back again to the desolation and silence in which they existed fifteen years ago. To decry legitimate mining is to invite into our presence bankruptcy and commercial ruin.

There is, however, a class of so called mining operations in our midst, which brings neither wealth nor happiness to our doors. Its direct tendency is to injure legitimate mining, and its results bring ruin to thousands. It unsettles men's minds by withdrawing their attention from regular business, makes loungers of laborers and villains of honest men. It brings into bad repute really valuable mining operations, and is ever a vile stumbling block in the way of those whom it cannot swerve from the straight-forward paths of rectitude.

What proportion of our joint mining stock operations may be classed as above we have no means of knowing. It is sufficient to know that such things do exist and have already been exposed. Swindling and thieving of every description are apt to be epidemic. When it is seen and known that one and another has been allowed to gamble and swindle in mining stocks—to salt claims and cook dividends for the purpose of effecting swindling sales—and when it is furthermore seen that those individuals are allowed to quietly enjoy their ill gotten gains, still retaining the respect, if not the confidence of the community; is it to be wondered at that men should begin to suspect and doubt one another, question the soundness of this company and that, until a perfect panic comes over the community? Not at all. When the law is lax, and the morals of the community so corrupt that these things can exist with impunity, we can expect nothing better than just such a state of things as we find existing to-day in San Francisco and throughout the Pacific Coast. It is the legitimate result of the forces we ourselves have set in motion.

If the law or public opinion had, in the incipiency of these things, been brought to bear with due weight upon such transactions as we have alluded to. If the "respectable insiders," who cooked up dividends, or the "enterprising superintendents," who bought or stole ore from a rich mine to salt a poor one, or who robbed the mine itself of all the rich ore from hundreds of tons of rock, to make a good show for a single crushing, so that they might sell out at a good round price—if these "enterprising" and "respectable" individuals had been made to feel a halter at the outset, Gould & Curry and other really valuable mines would not to-day have been selling at the ridiculous low figure at which they are quoted; and the entire community would not be trembling with fear least the bottom of all our mines should fall out.

There is no doubt but that the excitement of the past few months has run up many really valuable stocks to a higher figure than they could legitimately sustain, and that in the reaction many of our honest citizens and hard working, industrious mechanics, who had invested their all in stocks at these high prices, have suffered terrible losses. Others have been completely ruined by investing in merely swindling issues of stock which never possessed a shadow of value.

It is to be hoped the community will profit by the lesson which is now presented; and that our noble Pacific Possessions, rich in inexhaustible treasures, deep burried beneath her soil, will shake off the vile incubus by which she has been brought so near to the verge of ruin, and stand forth once more in her proper position as a nursery of honest toil, where the laborer is sure to reap the legitimate reward of industry and perseverance.

The bubble, we trust, has fairly burst. The sufferers are many; but the real, substantial mining interests of the State are as sound and lasting as ever. The constant influx of bullion, and the steady out-flow of machinery from this city, notwithstanding the panic that is upon us, fully attest the stability of our mines.

The ups and downs of stock on Montgomery street, in times past, have really had very little to do with the success or non-success of properly conducted mining operations. Let us hope that the days of excitement and swindling issues of mining stocks have passed. If our mining interests are entrusted to such only as are capable and honest, we have nothing to fear. Mining, legitimately conducted, is as safe and honorable an occupation as any in which men can engage.

COPPER AND SILVER ORE.—A large lot of copper and silver ore was landed in this city, yesterday, from the Chrysopolis. We noticed upon the wharf some 300 sacks, and among them a lot of beautiful peacock ore from the Superior mine, Plumas county; also copper ore from Nevada and Amador counties, and silver ore from the Sheba mine, in Humboldt county, N. T. The transmission of ores is fast becoming an important item in our interior transportation business.

GOLD ON RUSSIAN HILL.—It is said that several *chispas* or gold specimens, have been dug up, within a few days, by some workmen excavating for the foundations of a new building on Russian Hill, in this city. The largest weighs a fraction over one ounce.

COPPER ORE.—Three tons of copper ore from the Newton Lode, Amador county, have arrived in this city, the past week. It is of a superior quality and goes to Europe, where it ranks as a first class article.

Election of Officers.

The following companies, at their recent meetings, have elected officers as follows:

CERRO MORENO G. & S. M. CO.—Meeting June 27. Trustees, M. S. Martin, C. L. Taylor, E. M. Turvy, F. E. Turner and S. W. Collins. The Board of Trustees subsequently elected the following Officers: President, M. S. Martin; Secretary, C. V. Hobart; Treasurer, C. V. Hobart; Superintendent, S. W. Collins.

WYANDOTT M. CO., Amador Dist., N. T.—Meeting, June 28. Trustees, C. Anderson, J. L. Thurber, W. Augs. Knapp. No Trustees' meeting for the election of Officers has been held up to the time of our going to press.

DANIEL WEBSTER G. & S. M. CO.—Meeting June 29. Trustees, David Hunter, Charles Stott, E. H. Gates, Alex. Stott and C. E. B. Howe. President, David Hunter; Secretary, Alex. Stott; Treasurer, Charles Stott; Superintendent, Alexander Laird.

GOBERNADORA S. M. CO.—Meeting June 20. Trustees, Geo. C. Waller, R. G. McClellan, W. A. Abbott, J. Brazer, T. Prince. President and Treasurer, Geo. C. Waller. Secretary, C. W. Haydeu. [Corrected.]

MINING IN SOUTHERN SIERRA.—Mr. A. R. Bishop has exhibited to us some fine specimens of ore from the Occidental and Cox ledges, in Alleghany district, Southern Sierra. Upon the former a tunnel has been run in, from which has been taken about 100 tons of rock, worth, judging from working tests of similar rock from the same vein, about $100 per ton. From the Cox ledge about 150 tons have been taken out, worth, by estimates made from careful assays and prospects, from $60 to $150 per ton, exclusive of specimens. Mr. B. has recently sold a controlling interest in these two claims to a party of New York Capitalists, who will proceed immediately to erect a mill upon the property.

In the same neigborhood is the Alsop company's claims, located on five different ledges and upon which five tunnels have been driven, each of which has struck its vein and brought to light a large amount of rock. This rock also looks and prospects well. These mines are located in the midst of a very rich quartz mining district, which is being rapidly developed. They are most favorably located for working, being capable of a natural drainage of from 500 to 1,000 feet, by running tunnels from the river level.

NEW MAP.—We have received a map of the Forest Home and Willow Springs Copper Mining Districts, Amador county. This map embraces quite an extent of important mining territory, and will be found especially serviceable to all parties interested in the mines of that region. The map may be found at Pfeiffer's Drug Store, corner of Post and Dupont streets.

A new gold mine has been discovered near Yarmouth, in Wales. It is said to be rich in the precious ore.

THE MECHANICS' FAIR AND PAVILION.—Work upon the pavilion for the Mechanics' Fair is progressing finely, and has already assumed an extent and shape indicative of its future proportions. The edifice, when completed, will cover three quarters of Union Square, which comprises an entire city block. Information from the interior and evidences in this city still continue to indicate a most flattering success as the result of the enterprise. The benefits resulting from such exhibitions are now fully conceded, and all interested appear eager to embrace the opportunity thereby offered to bring their improvements and inventions into more general notice.

The grouping together of discoveries in science and art, in mechanics and manufactures, besides benefiting the inventor and pleasing the eyes of observers, also affords a most admirable study for those skilled in arts, the benefits of which are not lost even during the long recess of a year, or may be years, between the periodical exhibitions. They serve most admirably to excite invention and stimulate discovery. Their influence is always for good, and never pernicious.

SPLENDID MAP.—The day before the sailing of the Uncle Sam, we saw at the studio of Mr. Mansell, No. 422 California street, a splendidly executed map of the Owens River Mining Country. The map was of mammoth dimensions, some six by eight feet in size. It was executed by Mr. Mansell in the best and most approved style of the draughtsman's art. It was ordered by the Owens River Canal Company, and was sent to New York on the Uncle Sam. The New Yorkers will have a most excellent opportunity of studying, to the minutest geographical point, the geography and topography of Owens River, and Mr. Mansell will have the honor of introducing to their notice one of the most elegant specimens of map drawing yet produced on the Pacific Coast.

ST. IGNATIUS COLLEGE.—The exercises connected with the fifth annual commencement of St. Ignatius College commenced on Tuesday last and closed with an exhibition last evening. This exhibition proved one of the most excellent and interesting which has ever taken place in this city. Premiums were distributed last evening among those students who have most distinguished themselves in their studies during the past year.

I. O. OF O. F.—The following is the list of officers for the San Francisco Lodge for the ensuing term: Noble Grand, H. B. Sheldon; Vice Grand, Lucke H. Perkins; Recording Secretary, William Bartling; Permanent Secretary, Harry F. Swain; Treasurer, Henri J. Hellman; Trustees—Philo White, P. G. R., Henri B. Brooks, A. C. Waitt.

THE NYE COUNTY NEWS.—We have received the first number of the "Nye County *News*," a new paper published at Ione, Nye County, N. T., by Messrs. Groot & Eckley. The paper presents a very fair appearance, and is well filled with valuable matter, a large portion of which is well digested mining intelligence.

OUR NEW VOLUME.

With this number we commence a new volume of the Mining and Scientific Press, entering the fifth year of its existence. The Press may now be considered a fixed institution, and its proprietors look forward with high hopes of a prosperous future. We have not reached our present position, however, without a struggle; but we are satisfied with the reflection that by dint of perseverance, strict application to business, and a straight-forward course, we have been enabled to place the Press among the most useful and widely circulated journals upon the Pacific coast. In accomplishing this we owe much to the activity and kindness of friends, and very much to the friendliness of the interior journals, in making kindly and honorable mention of our efforts to place before California readers a paper worthy to be accepted as the representative of the great mining and mechanical interests of the State.

The paper has been enlarged and improved, from time to time, to keep grateful pace with its growing prosperity. To-day we make another step in this direction, and present the Press in an enlarged and greatly improved form. It will be our aim to continue it, as heretofore, a medium for communicating whatever may be new and useful in Art, Science and Invention, and an active organ and exponent of the great mining interest of the Pacific coast. Our means of giving it efficiency, interest and usefulness were never better than now. Able writers have been and will continue to be employed to contribute to our various departments, and reliable correspondents will continue to keep our readers posted as to what is transpiring in the various mining districts throughout the State and adjoining Territories.

Whatever we may find new or of interest in science or the useful arts, or in the field of discovery or invention, we shall hasten to lay before our readers. To everything relating to the industrial interests of California, or which may be embraced within the Pacific field of observation, we shall pay especial attention. In scientific matters, although we have not the field enjoyed by similar publications in the Atlantic States and Europe, we can nevertheless show that Californians, in proportion to their population, are not a whit behind any other people on the globe in new mechanical inventions, or in new discoveries in all the various branches of science and art.

Inventors will ever find us ready to do whatever lays in our power to assist them in their efforts both to bring out and to introduce to public notice their various inventions. The Patent Agency connected with this office presents by far the most favorable opportunity of which inventors can avail themselves on the Pacific coast to secure patents or file caveats.

The chief end which will be kept in view in the editorial management of the paper will be the dissemination of useful information and intelligent opinions deduced from ascertained facts and transpiring events. It is the duty, as well as the pleasure, of all intelligent minds to grow wiser as they grow older, till the faculties cease to contribute to the understanding. The present is most emphatically an age of progress, and at no other period has Nature thrown open so many avenues to the temple of her mysteries. The great secrets so long held within her closed portals are being fast brought to light. It is our humble mission to communicate to our readers these secrets, discoveries and inventions as fast as they are brought out. We shall endeavor not to fail or grow weary in our self imposed task. To work is a common lot; to be useful is an honorable aspiration within the reach of all; to be content is a blessed reward which all should desire. We are content with the present, but confess an ardent aspiration to render the Press in future more and more worthy of the prosperity which has smiled upon its past. To secure such an end, we shall continue, as heretofore, to work without ceasing.

A novelty in the way of celebrating has been secured at Nevada. On the Fourth of July a young lady is to read the Declaration of Independence.

"FOOTPRINTS" OF THE NOTORIOUS J. SILVERSMITH.

Under the heading of "Marks of a California Jeremydiddler," the *Bulletin* produces the annexed copy of J. Silversmith's circular, which, to those who are at all acquainted with the over-dressed, curly, he-scented, oily tongued, slimy and slippery author, appears decidedly natural and highly amusing. As an illustration of the universal detestation of this individual, we have only to say that out of all his old patrons, we have yet to meet the first one to speak a word in his favor. It is surprising to observe how long an illiterate, dandified dodger, without honesty on common sense, can be calmly tolerated in community. We are happy to say that Silversmith's connection with this journal is not of very recent date (Mr. Ewer having purchased the entire office some two years since) and neither of the present proprietors or attachees of the Press ever had any business or other associations with the renowned Silversmith. Several newspapers and correspondents have apologized for Governor Nye, signifying their disbelief that he ever gave the recommendation to the President, contained in Silversmith's circular, but, from the fact that the said Governor sent a *special message* to the last legislature of Nevada Territory, recommending an appropriation by that body of $5,000 to Silversmith for his book, we don't believe Julius is guilty of any forging or drugging in that case. Speaking of drugging reminds us of another affair in which our galvanized subject was accused of seducing (by chemical process) a Washoe widow, in this city. Whether truthfully arraigned for the act or not, it is nevertheless a fact that the hero of the rumor received a severe "whaling," and carried the marks of the same upon the steamer which bore him (with very mild opposition) from our shores, under the reported name (in the published list of passengers) of "J. Smith." Here is the circular:

New York, May, 1864.

Sir.—The subscriber, a graduate of Freiburg, Saxony, in Germany, for the past fifteen years an explorer in the Pacific States, namely, California, Oregon, Washington Territory, Idaho Territory, British Columbia, Van Couver's Island, Nevada Territory, New Mexico, Lower California, and Mexico, by profession a Geologist and Mineralogist, also the author of several publications on the Metallic and other Resources of these States and Territories, hereby offers his services to the public, being prepared to give reliable, and *important information, facts* and *data*, relative to the leading Mining Districts, Companies and Corporation, situated in the above States; also, valuable *opinions, data, statistics* and *suggestions* relative to Colorado Territory and its mines. The subscriber is actuated by various motives in presenting an opportunity to the interested public to learn these facts, the one most important is, to guard the purchaser against worthless, or what is better known as "Wild Cat" stocks, with which the mining share market is now inflated; by which source many innocent persons have been duped: on the other hand, giving such facts and figures of meritorious mining concerns as have and may prove a safe investment. The subscriber is well versed in the geological features of the above Territories and States, and personally examined all the leading mines therein, he is now engaged in the publication of an official work both for California and Nevada Territory, entitled the "Metallic and Agricultural Wealth of the Pacific States, etc.," including Mexico and Colorado Territory, the title and prospectus of which will shortly be presented to the public. This work will contain valuable information of the modes for extracting precious metals from their ores, mining in the Pacific States, statistics, etc.

The inquirer will be particular in giving the names of the districts, companies, where located, number of shares therein, when and where incorporated. The subscriber takes pleasure to append herewith one of the many letters of introduction from a well known and most respected citizen of New York, now officiating as Governor of Nevada Territory, to the President of the United States, also a few valued and prominent gentlemen as special references.

Respectfully, your obedient servant,

Julius Silversmith,

Commissioner for California and Nevada Territory, late editor "Mining and Scientific Press," San Francisco, author of "The Metallic and Agricultural Wealth Pacific States," "Miner's Companion and Guide," Corresponding Member of the Scientific Association of California.

Address Box 5,576 P. O., or Office, No. 28 Pine street, with James M. Miller, Mining Stock Broker.

N. B.—The subscriber is also prepared to draw up articles of incorporation for new Mining Companies and incorporations in compliance with the general and local laws, rules and regulations, and will pay special attention to giving reports, analyses of ores, and the products of any special districts or mines in the above States. Analyses, Assays, Tests of Ores and Minerals carefully prepared. Advice will be furnished, with estimates for opening and working mines; the nature of machinery for reduction and extraction of metals, in accordance with the nature of the ores existing in such mine or district; and what is more important, of all valuable metallurgical processes, will be furnished in such reports, giving the experience of over twenty years in that branch.

Abstracts of Titles of Mines and Land claims carefully prepared, and guaranteed to be from the official records, within any of the above mentioned States and Territories.

LETTER FROM GOVERNOR NYE TO PRESIDENT LINCOLN.

Executive Dep't, Carson City, N. T., September 18, 1863.

To the President of the United States—Sir—This will be handed you by my friend Mr. Silversmith, who is engaged in the publication of a work very important to us on the western coast—equally as to the whole country. The work will supply a demand that is much needed at present, viz: reliable information in regard to our mineral and agricultural productions. To our own people it will be invaluable. To people of other countries, information that will induce a large emigration. If you can give him encouragement, it will be highly appreciated by a loyal people on this side the continent.

With considerations of the highest esteem and respect, I am yours,

James W. Nye.

References—Gov. F. F. Low, California; Hon. John Conness, U. S. Senator, Washington, D. C.; Hon. Thomas Shannon, M. C., Washington, D. C.; Messrs. Hecht Bros., 405 Broadway, New. York.

Preserve this circular for reference.

[Original]

About the Idaho Mines.

FROM A PRIVATE LETTER.

We are permitted to extract the following paragraphs, descriptive of the Idaho country and its mines, from a recent letter written by an excellent typo who formerly resided in this city. He left Reese River last winter and traveled via. Salt Lake to Nevada, Idaho Territory. Our friend has turned practical "buggy driver," and consequently, as an honest miner, his words may be relied upon:

Having told you thus much about myself perhaps you would like to know something of my thoughts with regard to the country. As I know but little about it you will have to be content with that little, or seek information elsewhere. Nevada City, the place where I am now, is situated on Alder Gulch or Creek, a tributary of the Stinking Water, perhaps nearly midway between its source and where it flows into the latter creek. About two miles above here is Virginia City, the largest town in these parts, containing a population of 2,000 or 3,000. Higher up the Guleb is the Highland, a small town, and a mile or two below Nevada is what is called the Junction, another small town. Miner's cabins, tents, etc., are strung along the Guleh for perhaps ten or fifteen miles. Alder Guleh is a flat, wide ravine, and may perhaps be twenty miles in length, all of which is claimed, and part of which is paying very well.

The gold is found on and near the bed-rock (in some places clay—in others a sort of slate) in the creek, and as the bed-rock is from ten to twenty feet deep, it is necessary to strip off the top dirt from five to ten feet, which makes it very expensive working the claims. The pay-dirt is run through short sluices (from four to six lengths of twelve feet boxes) and the tailings have to be shoveled from the races to prevent flooding those below. The pay-dirt here is very easily washed, as it is generally gravel and sand, though I understand there is much clay up near the head of the gulch. The gold appears to be of a good quality as it passes readily for $18 per ounce here, though I have heard it will not coin so much. There are some high "bars" along the guleh that pay very well, and in these most of the work was done last season. Though some of the claims near this town are paying well, it is generally conceded that the richest ground is above here. I have heard of one company that "cleaned up" $502 in less than a day and a half, and they suppose they have just struck one corner of the rich "streak." It is nothing unusual to see from $100 to $200 cleaned up from a day's run. Up at the Summit the pay-dirt is from fifteen to forty feet deep, and many of the miners drift instead of stripping to work the pay dirt. Good claims there pay $100 to the drifter per day. The wages for good drifters is $9 or $10 per day. 'Tis disagreeable and dangerous work, as the gravel overhead is loose and wet.

Gold-dust is the principal currency here, as there is very little coin, and "greenbacks" pass for about 75 cents in trade. There are a few other ravines that contain gold, but nothing very rich has been struck so far as I can learn; though I have heard some Munchausen stories about Willow Creek, a tributary of the Madison, I believe one of the three streams that form the Missouri. Willow Creek is about thirty-five miles from here, in an easterly direction. Stinking Water, as I understand it, flows into Beaver Head, which is a tributary of the Jefferson, another fork of the Missouri. Where I now am is supposed to be about 450 miles to the northward (and I think some easting) of Salt Lake. The distance to Fort Benton is said to be about 250 miles. The climate here appears to be somewhat variable, as the "oldest inhabitants" asserted, about the time of my arrival, that "it never rains in this country" but to my certain knowledge it has rained *some* since I have been here. During the month of May it snowed several times and the weather was bitter cold—so much so that a mad wag of my acquaintance said one day that he had "often heard of that favored land where May and December were alike, but he had never before believed there was such a place." The hills in sight are now clothed with a beautiful green mantle, and the herds are getting as sleek and round as a stock-fancier could desire. Though not as heavily timbered as California, by far—still there is some fine spruce here. Agriculture is being tried to some extent, this season. Some of the land seems rich enough to produce well if the season is not too short. I am told that Bitter Root Valley (about 150 miles from here) produces grain and vegetables.

People are flocking in here very fast from the States, though some don't stay long. Trains are rolling in loaded with goods, and I heard of a man to-day who passed some 500 wagons between Missouri and here. Occasionally a stampede takes place, and ponies and saddles go up to high figures and away rushes the crowd. Soon they come straggling back and stock falls again to a low figure. The most of the supplies for this section have been drawn from Salt Lake, though some few articles come from Oregon and some from the States *via* the Missouri River. This season much is coming the "plains across" on wagons. Flour (a poor article) was selling at $35 when I got here; it is now selling from $20 to $22 per hundred. Bacon varies according to supply—has sold at 65c.@1.25; butter $1.50 @2.25; coffee 80c.@$1.00 and quite generally at corresponding rates. Tools are high—shovels $6@12; picks $5@7; miners' boots $12@15. [The paper on which I am writing (common ruled foolscap) cost me about 4 cents a sheet, which may account for my filling it up so.]

Bannock city is about sixty miles from here in a northwesterly direction. I have not been there, but I am told the mines are not so rich as those here; though they have many good quartz ledges. I understand there have been some few ledges found up at the Summit, but I have not seen them and cannot speak of them further. My theory is that this creek received its gold from ledges crossing near its head, and I believe good ledges will be found there. If I had not been so much amongst quartz for the last two years, I might look for them, but I am not "on it" just now. The people here are mostly from Colorado and the East, and are widely different from the people of the "West."

Depth of Coal Beds.—Heath's mine in Virginia is represented to contain a coal bed fifty feet in thickness: a coal bed near Wilkesharra, Pa., is said to be twenty-five feet thick; at Mauch Chuck is a coal bed forty to fifty feet deep, and in the basin of the Schuylkill are fifty alternate seams of coal, twenty-five of which are more than three feet in thickness. In Nova Scotia is a coal formation fourteen hundred feet deep, and containing seventy-five alternate layers of coal. The Whitehaven coal mine in England has been worked twelve hundred feet deep, and extends a mile under the sea, and the Newcastle coal mine in the same country has been worked to the depth of fifteen hundred feet, and bored to a similar additional depth, without finding the bottom of the coal measure.

According to the Oregon papers the people of that State are determined to have railroad communication with California. The survey for the Oregon portion of the work is proceeding rapidly and satisfactorily and a pass through the Calipooia mountains has been discovered which will reduce the cost of the construction of the road about one million dollars below the original estimate.

IRRIGATION---PRACTICAL AND ECONOMICAL.

The drouth of the present season is causing much attention to he given to the subject of irrigation; especially is this the case in Stanislaus and Calaveras counties. Artesian wells have hitherto been looked upon as the chief sources to which the farmers of the San Joaquin and Sacramento valleys should look for a supply of water for irrigation. Experience, however, has proved that they are entirely inadequate to the need, and that whole rivers can and should he diverted from their natural channels for this purpose. The Stockton *Independent*, editorially and through its correspondents, is doing much to arouse public attention to this important matter. A late number of that paper very truly says that a canal of sufficient size to conduct water enough to irrigate a strip of land two miles wide along the eastern and high side of the San Joaquin valley would have been worth a million of dollars this year alone. Were a system devised by which the ground could be moistened at such times as the crops were languishing in consequence of the arid state of the soil, that valley would be the granary of the State.

The efforts of Capt. Weber, of Stockton, the past season, have done much, by their complete success, to prove the utility and practicability of a general system of irrigation. Such a system, conducted on a scale of sufficient extent to allow of its benefits to be made generally available, could not fail to be profitable, as an investment, while it would fully double the value of nearly all the agricultural land within reach of its advantages. Even in ordinary seasons the crops would be greatly improved, while in such seasons as the present, its benefits would be almost if not quite equal to its entire cost. It appears to us that it would be a much surer and more profitable investment than mining ditches—as much more as the agricultural resources of well watered soils are to the ephemeral yield of all descriptions of placer mines. The benefits to be derived from such a source are as wide spread as is our population. Every man, woman and child, in the State, is at this time paying a daily tribute, as a penalty for our remissness in this particular, to be measured by little less than the difference between the present high price of provisions and produce consumed, and the prices at which the same commodities are furnished in seasons of ordinary prosperity. Among the many cases which might be cited to prove the advantages of irrigation, we instance the following from a late number of the Stockton *Independent*:—

How Irrigation Pays.—We know of a farmer in this valley who, by irrigating his land this season, has raised enough hay to pay off a mortgage of $1,500 which has lain against his farm for several years, and also to pay up all his other indebtedness and have seventy-five tons of hay to spare. This he has done while the opponents of irrigation near him have no crop at all. The load of care and depression in consequence of debt had become almost unbearable: but one year of irrigation has swept off all obstructions to cheerfulness and placed the man and his family in easy circumstances. He has great faith in the virtue of irrigation, and is not likely to be induced easily to forego the future use of water as a fertilizer.

Mining Machinery.—The Yosemite took up the river on Saturday last a very large lot of mining machinery for the interior. Included in the lot were two boilers, one for the Omega, and the other for the Minerva mining company, of Gold Hill—each weighing 6,747 lbs., These boilers were made by Coffee & Risdon of this city. They are for raising rock out of the lodes. A steam engine, made by Goddard and Co., of the Pacific Iron Works, for the Hale & Norcross company, went up at the same time. Also six amalgamating pans of the Hepburn & Peterson patent. The amount of mining machinery now going forward is said to be fully as great as at any former period. The panic among the brokers and mining speculators don't seem to have much effect in disheartening actual mining operations.

Stories have been set afloat that A. J. Butler, who lately died in New York, left an estate worth $2,000,000. The executor makes oath in Court that it does not exceed $200,000.

Plumas County.

A private letter from an esteemed correspondent at Taylorsville, enclosing a check for $50 for new subscribers to the Press, says—"The Smelting Works at Genessee, which are about five miles from this place, will start up some the first of September. They will commence on ore from the Cosmopolitan mine. I send you a very small sample of one class of ore from this mine. [The ore, which consists of a fair quality of copper sulphurets, has been received—Ed. Press.] There are ten feet, and nine inches of this kind of ore, perfectly free from anything else. Then comes five feet of black oxydes, mixed with native copper, and then more of the same kind of ore that I send, of which the company have seven feet in sight and are not through it yet. A few days since a ledge was discovered within a stone's throw of town, almost, with indications as good as the Cosmopolitan, with the same class of ore. If copper is valuable, Plumas county is rich. If copper is valueless, why then we have gold enough to place Plumas in the front ranks of mining counties.

The Copper Smelting Works are being put into operation through the enterprise and liberality of Messrs. Blood & Bolinger, who are large owners in the Cresent Co. Mr. Blood being President, and Mr. Bolinger Superintendent. Mr. J. C. Chapman is Superintendent of the Smelting Works, he having been Foreman for the Merrimac Co. of St. Louis, Mo., for several years. He asserted that he could smelt the ore, whereupon Messrs. Blood & Bolinger advanced the money for the work, saying that they had made their money here, and thought it no more than right to expend some of it in the same place; but it will not surprise me to see their investment in copper equal their gold mine.

The quartz mills in this section are doing remarkably well at the present writing and the different ledges are looking better than ever.

Wishing you every success in your enterprise, I remain truly yours." *

Brown's Valley—The Alleged "New Theory."

Messrs Editors:—In your issue of the 11th, you alluded to an article in the Marysville *Appeal*, respecting a "New Theory" recently introduced in the working of some of the mines in this Valley. In the *Appeal* of the 14th, I notice the "New Theory" explained, by a correspondent, (D). I cannot learn from any of the miners employed in the mines alluded to that any change has taken place in the method of working those mines. This new theory was generally supposed to have had reference to the *reduction of wages*, from three and a half to three dollars per day. I have listened while miners at work in the Pennsylvania and Jefferson mines have read "D's" letter in the *Appeal*. They all declared that they could not understand its meaning if it contained any.

I have had twenty-five years experience in mining, on almost every kind of ore; the last thirteen years in Quartz mining in this State. This new theory (so called,) has been practiced by practical and scientific mining engineers for the past fifty years—viz: to take out the good, and leave in the poor or worthless portions of the vein as pillars or arches to support the ground. This can only he accomplished by employing superintendents and underground agents, who are not only good practical miners, but in addition are well versed in mineralogy and metallurgy. With regard to the streaks or veins of rich quartz running through or crossing most of our main quartz leaders, I suppose that this means that there are rich "shutes" or chimneys dipping at certain angles lengthwise in the ledges—if that is so he is correct.

The Pennsylvania is a north and south lead, dipping east about 45 degrees, and Mc'Rule's workings prove that those rich streaks or shutes dip in a south east direction and not north east, as stated by "D."

[Our correspondent gives a detailed description of the works in the mine, which go to prove the correctness of his statement with regard to the dip of the rich pay streaks in the mine. Those details would not be of interest to the general reader. Our correspondent's assertion, we presume is all sufficient in this respect.]

The new shaft on the Penusylvania mine is down thirty feet, the vein is small but prospects rich. A vein of quartz has come down from the cap, or eastern side of the shaft No. 2, which prospects much better than the main ledge—when those two veins come together it is not unreasonable to expect a decided improvement in the mine.

The company are working the mill on their own rock and expect in future to keep it regularly employed. It is contemplated to increase the number of men next month.

A rich under strata of quartz was found a few days ago in the Yuba claim. The quartz recently crushed yielded $17 00 per ton. This is considered a permanent, and eventually will become a profitable mine. The Sweet Vengeance, I am told, cleaned up for last week's run, between eleven and twelve thousand dollars. Minea.

Brown's Valley, June 20th 1864.

Wonders of Kentucky.—The geological formation of the country is singular. Ponds with no visible inlet or outlet are very frequent. Holes in the ground, called "sink holes," are very common, and some of these lead to the great caves which abound in this region. Boys pick up load stone from the ground at most points. Surveyors are very often troubled from this cause. "Sink holes" extend into the earth from ten to three hundred feet, with sometimes a spring or small stream at the bottom. Two of these near Mumfordsville, excite a good deal of curiosity. One, on an eminence called the Frenchman's Knob, has been descended two hundred and seventy-five feet without discovering any indications of a bottom. Another near the town, is some seventy five feet in diameter at the top, inclines like a funnel to the depth of thirty feet. At this point is an aperture twelve feet in diameter, leading to unknown depths below. A stone or rock cast in returns no sound indicative of having found bottom. Near the same place is a spring that rises some twelve inches at noon every day with as great regularity as the sun passes the zenith.

Irrigation, has proved so profitable when it has been tried, the past season in some of the lower counties, that, according to the Sacramento *Bee*, it is now proposed to turn the rivers on to the main land for the purpose of general irrigation. When the canal of the Folsom Manufacturing Company is completed its waters can be made available for purposes of irrigation, after being used for manufacturing purposes. A large section of territory in Sacramento county could be thus irrigated and made immensely valuable for agricultural purposes.

Consolidated.—In Unionville, N. T., June 4, 1864, by T. J. Hadley, J. P., W. A. Holcomb to Emelie C. Whitney—all of Unionville.

Our friend Holcomb, who is County Treasurer of Humboldt, it seems by the above, has now a double treasure under his faithful guardianship.

Fire over a Mine Shaft.—The Reese River *Reveille* says that a fire recently broke out in the house over the Del Monte Mining Shaft, and before it was extinguished two men in the shaft were nearly suffocated by the smoke from the falling timber.

Quartz Mill Burned.—The quartz mill of B. B. Layton, at Union Hill, two miles east of Grass Valley, was burned to the ground a few days since. The fire was the result of accident. Loss $6,000—no insurance.

Decamped.—The Gold Hill *Message* is informed that D. D. Korn, late Secretary of Jewett and Shepard Mining Company, has proved a defaulter in the sum of about five hundred dollars of the Company's funds, and has left for parts unknown.

A Washoe Cannon.—The Virginia *Enterprise* says that an eight-pounder iron cannon is about to be cast at the Pioneer Foundry. This will be the first cannon ever cast in the Territory. Washoe, but a few weeks since, turned out her first steam engine, now her first ordnance is to be made. The gun is ordered by Governor Nye, and will be four and a half feet in length, with a bore of three and a half inches. It will be quite a formidable barker.

The Lake Superior Mines.—Private letters at New York from Lake Superior, state that matters among the Lake Superior copper mines are in a very active and prosperous condition, so far as the appearances of the mines and the prospect of extended operations are concerned. The most serious inconvenience experienced is the great scarcity of laborers, which, if some means are not soon adopted to counteract, may result in the stoppage of some of the larger and deeper mines, as the men dislike working in deep mines, though they may be dry, the fatigue and danger being much greater than in new and smaller mines.

CALIFORNIA.

Mining in Nevada County.—At Moore's Flat there is now more mining being done than for several years past. Every man in the place who wishes work can obtain it. Those claims which are being worked are generally paying well, and there is yet a large range of country around the town unprospected. At Columbia Hill and North Bloomfield not much is being done on account of the scarcity of water, San Juan is now quite a lively town. Seven companies are at work upon San Juan hill, and several more are almost ready to start. The companies now in operation use about 3,000 inches of water per day, and all are paying well. The gravel diggings around the town will last for years. At Manzanita Hill, a mile or two below San Juan, the claims are also paying well. The American, after a run of nine days, cleaned up $7,000. Several other companies are also at work upon this hill with like success.

The Merrimack lead, just back of the Glenbrook Race Course, between Grass Valley and Nevada, says the Nevada *Gazette*, has been a self-propelling institution from the start. The company did contract debts recently amounting in all to about eighteen hundred dollars, but recently they had a crushing of rock, which liquidated all old scores, and left about a thousand dollars in the treasury. They intend to proceed immediately to put up a mill and hoisting machinery, and expect to declare dividends before long. They consider the Merrimac about as good a thing as there is in the country.

REESE RIVER.

The Reese River *Reveille* says that the mining condition of the Reese River region is very prosperous, notwithstanding the panics abroad and croakings at home. The editor of that paper has recently paid an extended visit to the mines in Smoky Valley, and makes a most favorable report of their condition and prospects. Complaint is made of a lack of mills. A gentleman recently applied to one one of the quartz mills near Austin, to engage the proprietors to crush a large quantity of rock, and was told that it would be utterly impossible for them to do it, and furthermore that there was rock enough out now to keep all the mills busy for some time to come, and that all had engagements of as much as they could do. The same paper claims that the rousters which are now being put up by the mill men, will increase the yield of rock four fold.

Mr. Hawes is now building a saw mill just below the Oregon, which will be converted into a quartz mill as soon as they saw lumber sufficient to build it and get the necessary machinery.

The roasting furnaces belonging to Dorsey's Mill are about completed and the mill will be ready for business in a few days. They are built in the most substantial and workmanlike manner and when the mill gets to running regularly we may expect large yields of bullion from the rich rock they have to crush.

The process of "hand crushing" has been resorted to by certain parties with very profitable results. Their entire capital consists in a hand-mortar, and the rock from whence the silver is obtained is picked up about the surface.

Savage.—Work on the Savage is progressing finely. A lot of twenty tons of second class ore from this mine was lately crushed, yielding at the rate of $120 per ton. The company will have some of their third class worked, of which they have upwards of 100 tons raised and ready for working. It is expected that it will pay about $90 per ton. Their first class ore pays upwards of $1,000 per ton.

Nye County.—The *News*, just started in Ione, claims substantial advantages for this section over most other mineral regions of the Pacific Slope, by reason of a good supply of those necessary aids, wood, grass and water, so essential to the speedy and economical development of all mines and which are absolutely necessary to insure for this species of property a decided and steadfast value.

As an evidence of the value of the mines there, the *News* calls attention to the fact that Mr. George Hurst, of this city, a well known and extensive owner in many of the leading mines at Virginia City, an experienced miner and shrewd operator, has recently made a tour of observation through the mines, and not only awarded to them a high degree of excellence, but backed his opinion by extensive purchases. He has set men at work to take out some eight or ten tons of rock for transportation to Virginia City for reduction. If the results of this test equal his expectations, Mr. Hurst will proceed immediately to erect a mill.

Messrs. Brees & Co. are erecting two stamps and four arrastras on a stream about five miles from Ione, to be driven by water power. The works are nearly completed, and can readily be supplied with ores from the immediate vicinity. There is a considerable water power to be obtained from the streams in that neighborhood.

Prof. Silliman's Report on the Potosi Mine.

To Geo. C. Wickware, Esq., President of Potosi Mining Company:

Since the date of my previous report on the Potosi mine, I have had an opportunity to inspect the recent explorations, and to renew and compare my former observations—and beg leave now to present the results for your consideration—with some suggestions growing naturally out of the subject which I believe you will find worthy of your attention.

The mine on the 13th of June was explored to the depth of 360 feet, by the sinking of the engine shaft and driving drifts, and to the total depth of 368 feet at the then bottom of the winze at the end of the lower gallery south.

The ore ground in the engine cross-cut measured 79 feet in width, including two feet of the eastern clay wall, which is of good quality for ore and full of quartzose kidneys of vein charged with ore. Of this body 36 feet 6 inches are ferruginous quartz much fractured and crushed, carrying rich sulphurets of silver, and estimated to bo worth as a mass $80 per ton. Adjoining this on the west is a mass already described in my former report as the red quartz vein, filling the whole chamber and separated from the former mass by a narrow zone or vein of white quartz. This last seems to be all that remains of the great porphery mass (horse) of 94 feet in length already described as existing in the 300 feet level nbove. This is an extremely interesting fact, the practical value of which will be apparent in view of the discussions which have arisen respecting the true nature of these intercalated masses of porphery—whether they were to be regarded as vein matter or as intruded masses. In the Potosi they are all (of whatever size) so far as I have seen them, but fragments of the hanging or eastern wall and not to be distinguished mineralogically or practically from it. I think there can bo no doubt of their fragmentary character, not that they came into the chasm by force of gravity from the hanging wall. At all events the disappearance of the "horse' in your 360 feet level is certain and makes room for the opening out of a body of productive ground nearly 80 feet in width, which is almost exactly the width of the great chamber of the Gould & Curry at its widest development on the level of their lower tunnel.

You will see that the announcement, quoted in my former report (May 12th) from your Superintendent, of a body of ore almost 25 feet thick is quite within the limits of truth, as confirmed by subsequent developments. The farthest point south at which this body had been cross cut on the 13th was off the winze 80 feet south of the engine shaft, when it measured 34 feet 6 inches to the east clay wall, but its western limits were not exposed. A sample of the black sulphurets nnixed with white quartz taken overhead, midway the gallery going south yielded on assay:

Gold 9.72 oz.	value $20 6718	$200 92
Silver 328.60 oz.	" 1 30	427 18
Valno per ton		$628 10

I explored the bottom of the winze 368 feet from surface and 18 feet under the present level. It is sunk all the way in ore of moderate richness, being out of the white seam from which the previous sample came and which here goes to the east of it. From its bottom I selected a sample for assay, which gave the following results:

Gold 0.60 oz.	value $20 6718	$12 55
Silver 17.18 oz.	" 1 30.	22 90
Value per ton		$35 45

Indications were visible at tho time of exploration of the coming in of a rich seam of ore in the bottom of the 360 feet level. The clay in the eastern cross-cut had a dip of 70° east on the quartz seam, while on stripping the clay the eastern fluccan was seen to dip east at 50°, indicating the probability of a new zone making east. Since that time, as I learn from the Superintendent, a deposit of black sulphurets of silver has made its appearance in the bottom or floor of the drift at 360 feet level, extending about 70 feet north and south of the cross cut from the engine shaft. On cleaning up the floor to erect timbers this deposit was found to measure 17 feet and to have an assay value of $400.

Tho value of these timely explorations and discoveries can hardly bo over estimated as giving a sound basis for confidence in the future of the mine. They show, on the most moderate calculation of quantities, at least one full year's supply of ores between the 300 and 360 feet levels—laid open and easily measured—supposing the rate of production to be 100 tons of ore daily. The value of these ores is believed to be $80 per ton for the portion estimated. My former report showed the existence of a year's supply of good ores in the levels above the 300 feet station. Thus, without estimating the ground beneath the 360 feet level just named, or the low grade ores held in reserve, you have already explored and open to view probably a two-years' stock of ores. The wisdom of the policy which has led to this development is obvious even to those not well acquainted with the history of mining adventures. The fertile source of failure in such efforts being found in the neglect of timely works of exploration.

You may now proceed to erect mills for the working of your ores, assured that the mine will justify the expenditure, and you may with a good conscience commend the property as one of demonstrated value. An important element of value in the recent developments in depth and extent on your property, is in the effectual bar which is thus set to adverse claims, and in this view it is desirable as soon as circumstances permit to explore the extreme eastern and southern limits of your property, in ground now almost completely unknown. Mention has already been made in the former report of the explorations in progress in your southern shaft, which offer reason to hope that a new zone of productive ground will be opened at a point far beyond any now known to exist in that direction. This exploration should be pushed as rapidly as other work will permit—both in depth and by drift and cross-cuts at proper intervals—although it may at times look unpromising, it is only by such means that new discoveries can be made, while the cost paid out of the current income of the mine can hardly be felt, as the force required is small.

Allusion has already been made to the fact that the shoots of ore in the Comstock have, as far as observed, a southeasterly dip or trend. This is very conspicuously shown in the Savage mine, as may be observed by the least practical person on inspecting a map of that fine property on which the several "stations" are laid down in position, one above the other. It will be noticed that the great chambers are found at each succeeding depth to the south and east of their position in the former level.

This structure is plainly visible in the Potosi also, when in the "drain level" 248 feet east of the engine-shaft, measuring perhaps one foot, at 52 feet lower it measures four feet, and again at 60 feet lower it has become 25 to 28 feet thick. Indications of the occurrence of another such descending shoot have made their appearance in the cross-cut east on the drain level in the clay, but no explorations below have yet been made to determine its presence there. It is by the careful observation of such nice points of structure that the acute mine manager detects the presence of unexpected wealth and learns how to develop it.

PRODUCT OF THE MINE.

The quantity of ore sent to mills for reduction by the Potosi Mining Company from May 1st, 1863, to May 30th, 1864, was 20,673 tons. During May, however, the yield was 3,360 tons, and there is no reason in the condition of the mine why 100 tons daily should not be extracted. This is a very large quantity of ore and very few mines in the world are capable of yielding so much. Nothing would justify so large an extraction, but the almost fabulous abundance of second and third class ores in this portion of the Comstock lode, coupled with the fact that the wise policy of a fore-handed development has put the mine already in a position to show a two years' supply in advance. In this connection a few words will be in place on the

TRUE POLICY OF WORKING THE MINE.

There are two plans which may be followed in working a mine, to insure dividends after it is demonstrated, as in your case, that it contains an abundanee of ores. The first plan is to proceed with the policy of *a rapid extraction*, milling the ores on the best terms which can be made with custom mills—without a very close regard to the loss in the process—the object being an early return. The objections to this course are manifold but may be summed up in a word as a short sighted, if not a suicidal policy, tending to a rapid exhaustion of the mine, the waste of the large part of its ores and constant heavy loss to its stockholders.

The second plan is that of a moderate rate of exhaustion and the milling of its own ores by the company, with the obvious advantage of saving a large per centage of the metal in the ores, of retaining the tailings, which are a perquisite of the miller on the other system, and of gaining on the mine whatever profit there is in the process of milling.

The practical effect of the first of these two systems is well illustrated in the history of the Gould & Curry, to which I trust I may be permitted to refer without impropriety, as the facts used are those common to all who have interested themselves in such matters. They have extracted about 7,000 tons monthly, or 85,000 tons per annum—yielding an aggregate in round numbers of about $6,000,000. Of this large aggregate $1,500,000 has gone to the stockholders, leaving $4,500,000 as the cost of mining, milling and management, or slightly over $50 per ton costs. This statement makes no account of the loss in the tailings, which is probably 40 per cent. The tailings in the slime pits at the Company's mill are worth by assay over $130 per ton—only rich ores having been worked at this mill. As this Company divides the metal saved by custom mills with the millers equally, it is obvious if we put the cost of milling at $15 per ton, that these has been paid out in profits to millers more than the stockholders have received; the amount of dividends being about $17 50 per ton of the ores worked. This comparatively small nett sum is obtained only by the exhaustion of the mine at the rapid rate of 250 tons daily. Now it is easy to show that by the new policy now being inaugurated, a dividend of $150, and probably of $200 per foot can be made by working not over one-half of the amount of ores previously consumed. This is to be accomplished by the Company's extracting no more ores than they can work at their own mills, with an improved method of treatment. That such a result is quite practicable no competent judge can doubt, and at all events a few months will unquestionably demonstrate it to the satisfaction of all.

In your own case, you pay to the millers $25 per ton, obtaining from $75 ore about $50 value of which the mine obtains one-half. The following comparative statement shows the merits of the two systems, on the basis of 100 tons of ore daily, from which $50 per ton is saved:

Say 100 tons daily at $50		$5,000
Paid to mills, $25	$2,500	
Mining costs, $10	1,000	3,500
Benefit to the mine daily		$1,500
If the mine works its own ores the account stands thus:		
100 tons daily, $50 saved		$5,000
Mining and milling		2,500
Benefit to the mine daily		$2,500
The annual difference amounts on six days in the week to		$312,000
The tailings contain $25 per ton, on this estimate, of which it will be possible to save by some method, say one-half or $12 50 per ton, or		125,000
Total saving to the mine by working its own ores		$437,000

This estimate assumes the practicability of saving from the tailings one-half the metal they contain. This may be done in part by an improved method of milling and in part by the use of the Patio, which is now in process of testing by the Gould & Curry on their tailings.

In any case it does not admit of a doubt that the true policy of the mine consists in working its own ores, and holding a strict control by assay over every step of the process. Thus alone can the life of the mine be prolonged and the treasure contained in those bountiful gifts of nature, of which man is only the steward, rescued from loss and added to the grand aggregate of the world's resources.

In conclusion permit me Sir to congratulate you on the present position and prospects of the Potosi, which certainly challenges comparison with any other mine of equal size on the Comstock lode, and gives promise of a splendid future.

Yours, respectfully,

B. SILLIMAN, JR.

San Francisco, June 22, 1864.

TAPPING THE TRADE OF THE DALLES.—The *Mountaineer* sounds a note of alarm at the prospect of the mine-supplying trade of that place being diverted by enterprising Californians. It says it is informed by reliable parties that teams have gone through from Folsom, California, to Ruby City, Owyhee, in four weeks traveling time. The road is reported to be bad but in spite of obstacles, the trip through has been made in the time stated. Folsom is the terminus of the Sacramento Valley Railroad, and if teams can come through from there in four weeks, it may reasonably be concluded that California will share the trade with the Owyhee mines. There is no reason in the world why California should *not* control the entire trade of the Owyhee and South Boise mines, as the roads are both shorter and better than that from the Dalles.

AN interesting and pretty little girl, seven years old, was bitten, in Stockton, June 23d, by a dog in a private residence. The bite is a painful one, and will probably disfigure the child for life. The dog took her chin in his mouth, inserting his upper teeth in her upper lip, tearing it completely open from the nose down.

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)	$5.00
Six Months, (one volume)	3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE IN COVERNMENT HONSE, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

O. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

Mount Eden Mining Company—Owen Ledge—Gold Hill District, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said company, held on the 31st day of May, 1864, an assessment of fifty cents per share was levied upon the capital stock of the said Company, payable on the fourth day of June, 1864, in United States gold coin, to the Secretary, or to FRANK MORGAN, Superintendent at the mine.

Any stock upon which said assessments shall remain unpaid on Saturday the 2d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 18th day of July, 1864, to pay the delinquent assessment, together with costs of advertising, and expenses of the sale. By order of the Board of Trustees. H. B. CONDON, Secretary.

Office, No. 620 Washington street, (Room 3) San Francisco. 23-4t

The advertisement of Stock Delinquent on the above Assessment (No. 3) is postponed until July 9th, and the sale thereof is postponed until July 25th, 1864. By order of the Board of Trustees. H. B. CONDON, Secretary.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of the property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to forfeit it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

19-tf

Quartz Mountain Gold and Silver Mining Company, Placerville, El Dorado County, California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 29th day of June, 1864, an Assessment of forty cents per share was levied upon the capital stock of said Company, payable immediately, in United States Gold Coin, to the Secretary, at the office of the company, No. 623 Montgomery street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 19th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees. GEORGE A. HILL, Secretary.

Office, No. 623 Montgomery street, San Francisco, California. 1

Arizona Consolidated Mining Company, Eureka District, Arizona Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 29th day of June, 1864, an Assessment of 20 cents per share was levied upon the capital stock of said Company, payable immediately in United States gold coin, to the Secretary, at the office of the company in San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 13th day of August, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. N. G. FRENCH, Sec'y.

Office, 728 Montgomery street, San Francisco. 1-4t

Warfield Mining Company, Placer County, California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 25th day of June, 1864, an Assessment of fifteen cents per share was levied upon the Capital Stock of said Company, payable immediately to Thatcher Ross, Gold Hill, Placer County, or to the Secretary at the office of the Company in San Francisco.

Any stock upon which said Assessment shall remain unpaid on the 6th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 22d day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the Sale. R. K. ALLEN, Secretary

Office, No. 16 Metropolitan Block. 1-5t

Caution.—All persons are cautioned against purchasing Certificates No. 43 for 20 shares, and No. 435 for 3 shares (unassessable) in the Great Consolidated Boise River Gold and Silver Mining Company, the same having been fraudulently obtained from the subscriber. Transfer of same has been stopped on the books of the company.

THE FIRE ALARM TELEGRAPH.

It having now been fully decided to construct a system of fire alarm telegraph for this city, it cannot fail to be of interest to most of our readers to learn something of the principles and working of this new system of fire alarm. We have before us a full description of this ingenious and most useful invention, contained in a public lecture, by Dr. Wm. F. Channing, of Boston, from which we condense.

HOW NOTICE OF A FIRE IS CONVEYED TO THE WATCHMAN.

It should in the first place be premised that the conditions of the fire alarm telegraph are such as to require that information should first be sent in from any part of the surface of the city to the watchman at its center, and from thence be sent out to the firemen and the people all through the city, in such a definite form that every person will understand at once the near locality of the fire. To accomplish this, the city is first divided into districts, and each district subdivided into sections. At some point, in each of these sections a signal-box is placed, from which a telegraphic wire extends to the central station. On the door of each signal-box is conspicuously painted the number of its section and district, and the place where the key to the box may be found. In case of a fire breaking out, the discoverer of the same is expected to go immediately to the nearest signal-box, and on opening the door he will see a little crank. He knows of course that a crank is made to turn; when this crank is turned, it sets in motion machinery which communicates to the watchman at the central station the number of the fire district in which the signal-box is located, and the number of the box itself. This fact is repeated and recorded every time the crank is turned—and nothing more. Thus, anybody that can turn a grindstone can communicate to the watchman at the central station the fact that there is a fire and the district and section where it is located. When this crank is turned it rings, by telegraphic communication, a little alarm bell at the central station, and at the same time records, on a proper register, the number of the district and section from which the alarm is sent.

HOW THE ALARM IS COMMUNICATED TO THE DEPARTMENT.

At the central station, connected with the alarm circuit, is a galvanic battery and an instrument for completing the circuit of that battery, called the district keyboard. This is constructed with several keys, corresponding to the numbers of the fire districts in the city.—If you depress any of these the machinery inside commences to move, and the circuit is completed at such intervals as to strike and repeat on the distant alarm bells the district number represented by that key with suitable pauses between.

We will suppose that the operator at the central station has received the signal of fire from district three, section five. He now places his finger on the key of district three, in the keyboard. Instantly all the alarm bells in the city begin to strike the district number, *three*, and continue, no matter what their number or what the weight of their hammers, so long as that single finger rests on that key.

In addition to the district keys, the operator has also before him a set of keys connected by return wires with the several signal-boxes, and by which he can communicate with them. In each of these boxes is placed a small bell, which is so arranged in relation to the return wires, as above, that when the operator at the central station presses upon one of the signal keys he causes a hammer to strike the bell enclosed in each of these boxes, all through the city. Now we have already supposed that he has received notice of a fire in district three, section five. While his hand rests on the key of district three, he taps occasionally *five* times on the return key of the signal circuits. The little bell in each signal-box strikes *five*. The fireman listens to the public alarm bells, and gets from them the number of the district; he runs to the nearest signal-box, and listens a moment to gather the section number from its little signal bell, and he now knows that the fire is at district three, section five. He directs his own motions and his engine from the start, to within, perhaps, 100 yards of the fire.

THE MECHANISM FOR STRIKING THE DISTRICT OR ALARM BELLS.

The heavy hammers may be raised above the the bells by any force which can be conveniently applied, as by a weight which may be wound up by hand. But in all cities where the water is confined under pressure in the mains, it will supply, by means of a water engine, the power necessary to wield the heavy hammers with the greatest facility. But how are hammers of one or two hundred pounds weight to be tripped by telegraph? To effect this readily, Mr. Farmer invented his electro-magnetic escapement, one of the most beautiful and original of recent mechanical applications. In this escapement the electro-magnet, when it becomes charged by the galvanic influence received from the central station, attracts the little piece of soft iron or armature in front of it, which supports a small lever poised nearly vertically, and weighted with a little ball at its upper end, this lever and ball, when tripped by the withdrawal of the armature, acquires sufficient momentum to strike up the *detent* of the train of wheels which, in their revolution, raise the hammer and then allow it to fall. A single blow of the hammer follows each electrical impulse sent from the central station, and the revolution of the train of wheels raises also the falling lever into its place and catches it again on the armature lever, ready to be disengaged or tripped for another blow.

THE ADVANTAGES OF THE SYSTEM.

No other system than the above has ever been devised by which a fire can be localized any closer than a given district, and that from the manner in which the notice is given must, in a large city, be very extensive—half a mile square at least.

In all previous systems there has been a delay, first in getting an alarm from the fire to the bell; and, second, in finding the place of the fire in the district after the alarm was given, and reaching it by the shortest route. By the fire telegraph both district and station are publicly notified; the one by the alarm bells, the other by the signal boxes.

In Boston, where the fire-telegraph has been in successful operation for nearly three years, a star of wires is seen radiating from the top of the City Building. These are the signal circuits connecting into one system forty-six signal boxes scattered over the city, and the alarm circuits connecting twenty-four belfries on church, school, and engine-houses. A few large bells would be preferable to this multiplicity of smaller ones, but this whole number are struck by the touch of a single man's finger in the central station.

The operator at the central station is sometimes able to throw the bells on, and tap back to the signal boxes before the originator of the alarm has ceased to turn his crank in the immediate neighborhood of the fire. As soon as the bells strike, groups of persons will be seen clustering around each signal box to listen to the tapping of the fire department exactly where the alarm originated.

The heaviest hammer in the system at Boston weighs 100 pounds, and it is wielded by the Cochituate water at an expense of only one gallon for each blow, and tripped by telegraph from a distance of two miles. By virtue of the electric current and the pent up water, this bell, and others associated with it might be rung in measured strokes from the beginning to the end of the year by the pressure of a single man's finger in a distant room.

RAILROAD SPEED.—The following are given as instances of the best time made on Railroads. The Duke of Wellington was conveyed from Paddington, London, to Slough, in a special train, in fifteen minutes; the distance is eighteen miles or at the rate of one mile for every fifty seconds. The locomotive "Hamilton Davis," with six cars attached, ran on the New York Central Railroad, in 1855, fourteen miles in eleven minutes, or at the rate of forty-seven seconds and two moments per mile. Ten miles were run on the Pennsylvania Railroad in seven minutes and a half, or at the average rate of 40 and 50-100th seconds per mile. This perhaps, is the fastest time that has ever been made on a railway. From Albany to New York, 144 miles, a locomotive has run the entire distance, on the Hudson River Railroad, in 169 minutes, or at the average of one minute, ten seconds and six-tenths of a second per mile. An engine with train attached, has run from Indianapolis to Union City, a distance of 84 miles, in ninety minutes, or at the rate of one minute, three seconds and a fraction per mile. From Albany to Niagara the distance by railroad is 350 miles. Over this an express train has passed in seven hours and thirty-two minutes, or at the rate of one minute, twenty-two seconds and a fraction per mile.

THE American Nail Company, which has a patent by which it is claimed all sizes of nails can be made at one quarter the cost of the ordinary mode, has just started in Boston with a capital of $250,000 in $100 shares.

FLOCKS of sheep in the vicinity of the Geysers, Napa county, have suffered terribly from the depredations of grizzly bears.

MANUFACTURE OF PLATED GOODS.—Sheffield, England, has long been celebrated as the great center of the plated goods manufacture, and for the peculiar excellence of the work produced. The method by which this is accomplished, though ingenious, is quite simple, as will be seen by the following:

An ingot of copper or of German silver, being cast, and the surfaces carefully prepared by filing, so as to remove all blemishes, and a piece of silver, having likewise one surface perfectly cleared, are tied together by means of an iron wire. A mixture of borax and water is then drawn round the edges with a quill. They are next placed in a common air furnace to be heated to a proper temperature, and having a small aperture in the door, through which the workmen can observe when that temperature is attained. During the union of these two bodies the surface of the silver is seen to be drawn into intimate contact with the copper or German silver, and the moment this takes place is the signal for removing the bar from the surface. The appearance of incipient admixture on the edges of the silver shows how perfect the fusion has been, as this oozing of the metal is not in consequence of any extraneous application of solder, etc., but entirely the effect of the fusion of the surfaces of the two bodies. The ingot thus obtained may now be rolled into sheets of any required thickness, and the union of the two metals is so perfect that they continue inseparable, even when drawn out into the finest wire.

Thus much for the primary process. In the manufacture of a tray out of this plated metal, the metal is first cut to the proper shape. The edge of the tray is then formed by hammering it round a bar of steel, and the whole is polished by beating it with a hammer, either upon one or both sides. The ornaments are executed with much care, and great attention is necessary lest the tool should cut too deep and reveal the base or metal beneath. The chasing is done by means of small punches of various shapes, and thus the metal is not cut out, but forced in. The last operation is that of burnishing.

THE FIRE ALARM TELEGRAPH.—We have devoted considerable space in the present issue to a description of the mechanism of the Fire Alarm Telegraph which is about to be introduced into this city. The system of fire alarm was invented by Mr. Moses G. Farmer, of Boston, in which city it was first put to practical test. The rapidity with which notice of a fire is conveyed to the Department by this mode of alarm has not only greatly reduced the average loss from fire in that city but has also very much diminished the number of alarms. It is an American invention, and constitutes an important step in the progress of municipal organizations. The patent right of the invention is held by Messrs. Kcunard & Co., of Boston. We understand that the expense necessary for establishing the system in this city will be about $20,000. About 40 signal boxes will be put up. From six to eight months time will be required to put the machinery into working order.

NEW IRON SAFES.—Lillies chilled or cast iron safes, appear to be getting very popular among those who are fortunate enough to have anything to put in them. They are thus described:

The base or the foundation of the chilled iron safe is a frame or box made of bars of wrought iron, one-fourth inch thick by one and a half to two and a half inches wide, crossing each other at right angles, and placed near each other, forming a compact net-work. The inside of this box is filled with sand and placed in a mold with an open space all round the outside of one and one-fourth to two inches (according to size and character of safe), and into this space is poured the cast iron, which becomes thoroughly chilled and hard, like the plow-point throughout. Inside of this iron body, which is without joints, is attached the best fire-proof composition yet known, and held firmly in a perfect air tight chamber—the composition being from three to four inches thick."

ENAMELING JEWELRY.—The white enamel of watch dial plates is composed of ground flint glass, and the oxide of tin. The enamel in a pasty condition is laid upon the polished metal, and all the free moisture is absorbed by applying a dry cotton cloth to it, after which it is smoothed on the surface and permitted to become dry. It is now placed within a muffle, and subjected to a powerful heat in a furnace. Several thin coats of enamel, frequently four, are laid upon the top of one another, each fired and rubbed down with a fine file and polished with a burnisher. Blue enamel is obtained by mixing cobalt with an opaque white enamel. The protoxide of copper affords the color for red enamel.

CHANGES OF A PIECE OF SILVER.—If we place a piece of silver in nitric acid, and add a proper quantity of water, the silver is dissolved as completely as sugar is in water, and wholly disappears, the solution looking exactly like pure water.

If we now evaporate a portion of the water, and set the solution away, we find in the course of a few hours that the bottom of the vessel is covered with beautiful white flakes, which are crystals of nitrate of silver, the metallic silver in combination with nitric acid. Nitrate of silver has some peculiar properties. If kept free from contact with other substances, it may be exposed to the light for any length of time without any change from its pure white color. It may be applied to cotton or the skin, or hair, in the dark without any change in color, but if it is applied moist to any vegetable or animal substance and exposed to the light it turns black in a few minutes. It is the coloring agent in indelible ink.

If we place crystals or nitrate of silver in water, they are quickly dissolved; and if we throw a little table salt—the chloride of sodium—into the solution, the silver leaves the nitric acid and combines with the chlorine in the salt, forming the chloride of silver. This is a white, lustreless powder, and gradually turns black when exposed to the action of the light. Metals may be silvered cold by means of the chloride of silver.

If we mix chloride of silver with carbonate of soda, and heat the mixture in a crucible to a very bright red, it is dissolved, and both of the substances are decomposed. The chloride leaves the silver and combines with the sodium of the soda, forming chloride of sodium—table salt—the carbonic acid escapes as a gas, and the silver is left in a metallic state in the bottom of the crucible.

Thus we have silver first as a white solid metal, then a liquid, like water, then in crystals like salt, then as indelible ink, then as a grey or black powder, and finally as a metal. And these are only a very small part of the forms which it may be made to assume.

LIGHTNING PROTECTORS.—All the fire telegraph stations in Boston are provided with "lightning catchers," or ground conductors for atmospheric electricity. Hence an incidental protection from lightning, commensurate with the extent of the network of wires above, is obtained for the city. When these ground conductors have been temporarily removed from the alarm-bell stations, a flash of lightning has been occasionally followed by a single blow from one or more of the bells. But where the lightning catchers have been in place, they have proved sufficient, except in rare instances, to divert atmospheric currents from the electromagnets to the ground. No practical or serious inconvenience has resulted from this source. But it has occasionally been a matter of curiosity and interest to hear the lightning thus tolling the alarm-bell.

NEW METHOD OF CHURNING BUTTER.—A curious method of churning butter is now adopted in Normandy and other provinces. They put the cream into a linen bag, neither too fine nor too course; tie it and place it in a hole twenty or twenty-five inches deep, where the ground is quite open to the sun and air.—The hole is covered and the cream left in the earth twenty-five hours. It is then taken out in a very hard state and pounded with a wooden pestle. The butter separates from the cream in two minutes. If there is a great quantity of cream it is necessary to leave it longer in the ground. In winter, when the earth is frozen, the process can be made in a cellar with sand. The bag must be thick enough to prevent the cream from oozing through, and sometimes an outer bag encloses it to preserve it entirely clean. The cream is said to yield more butter and better than by churning. Certainly nothing can be finer than Normandy butter, which is always brought to market without salt, and keeps fresh very long.

SEWING MACHINE.—The Marysville *Appeal* says that the most ingenious piece of mechanism ever seen in this State is on exhibition at the jewelry store of E. Wright, on D st., in that city—a most perfect engine, silver-plated and about 30 inches long, is the motive power, attached to which is a boiler and apparatus as complete as if it weighed a ton. It works as easily as any other engine of any calibre, and to which is attached one of Grover & Baker's sewing machines, which it propels at lightning speed. The sewing is the most uniform we ever beheld.

FLY FAN.—A barber in Stockton has invented a fan to keep flies off his customers. A wheel four feet in diameter is placed in one of the bath rooms, where it can be set in motion by turning the spigot of a water pipe over it, when it propels the fanning apparatus, arranged along the ceiling of the house over the chairs occupied.

THE Folsom Dispatch has been attacked with the currency fever, and advocates the adoption of greenbacks as currency.

Patent Department.

A New Amalgamator.—Mr. Charles Camp has invented an amalgamator, which is in appearance entirely different from any machines of the kind which we have seen. Nevertheless it is based upon the same first principles as the best pans. The crushed quartz is ground between annular disk mullers and spiders. These mullers are revolving (different from the other pans), with a horizontal shaft, on a vertical plain, on vertically placed spiders. By a peculiar arrangement the inventor applies four mullers and four spiders, attaining by this means four pair of grinding disks, so that such a pan, of the same diameter as the ordinary pans, has four times as much grinding surface, and should therefore grind four times as much quartz pulp.

The mullers and spiders are brought in contact, and there kept by means of a constant pressure, which is a great advantage over most other pans, where this pressure is greatly variable and therefore the grinding irregularly performed. The amalgamating operation takes place in the lowest part of the pan, where the pulp is pressed through the quicksilver by aid of the centrifugal force of the mullers, and the arrangement is so contrived that the entire pulp ground between the mullers and spiders is forced to go through the quicksilver again to the mullers, for re-grinding, and so on until the process is completed. The pan has a half cylindrical trough form, and is made of cast iron. The advantages claimed for this pan are that quartz pulp is more regularly ground and amalgamated, and the quicksilver is not injuriously affected by any moving machinery. The price of such an amalgamator will be 25 per cent. less than that of ordinary pans of the same capacity for work. A patent has been applied for through the Mining and Scientific Press Patent Agency.

A Submarine Lifter.—Mr. Austin T. Page, of Weaverville, in this State, has made application through the Agency connected with this office, for a patent for an apparatus of his invention, which he styles a "Submarine Lifter," to be employed in raising sunken ships or other heavy bodies which may be submerged in water. The invention consists in placing heavy timbers across the decks of two floats or barges; said timbers to be carefully secured by cross timbers, and of sufficient strength to lift the object which it is designed to raise. The barges are to be kept apart sufficiently to enable the sunken vessel to be raised between them. Thus prepared they are floated into a position, so that the timbers extending from deck to deck shall lie directly over the deck of the vessel to be raised. Chains, which have been previously placed under the keel of the sunken craft, are to be secured to these cross timbers, which are to be lifted by the aid of the tide, or, when there is no tide, by means of screws placed beneath them after the manner of a jackscrew. A peculiar device for lifting the stem or stern of the vessel by a levcrage, and passing chains under her keel by means of a kind of submarine derrick or crutch, also constitutes a part of the invention. This last is really the most important part, but cannot well be described without illustrations.

Graining Apparatus.—Messrs. Youngberg & Co. have applied for a patent for a graining roller, to be employed in the process of graining walls, paper, etc. The pattern is first engraved upon a wooden cylinder, from which a plaster mould is constructed, and in which mould is made a cast of a composition of glue and molasses, the same as is employed in making printers' rollers. The pattern thus cast consists of an endless sheet, which is placed upon a core and mounted upon a proper frame. A distributing roller is also made, having upon its top a fountain, from which it is fed, and the desired coloring matter spread upon the surface of the pattern cylinder; the whole being operated by hand and the friction derived by moving the pattern roller over the surface to be ained. The invention is a great labor-saving rangement. A patent has been applied for rough the Agency connected with this office.

An Improved Amalgamating Pan.—Mr. Zenas Wheeler, of this city, has applied through the Mining and Scientific Press Agency, for letters patent for an improved amalgamating pan, which consists first of the ordinary steam chamber beneath. Just above the interior bottom of the pan is placed a diaphragm. Above the arms, and attached to the sides of the pan, are wings to check the revolving current of pulp, and force it to the center, at which point it is made to pass down and under the diaphragm and thence out and up again at the circumference of the pan. The pan is charged with quicksilver to a hight that will just submerge the diaphragm, but not come in contact with the arms or stirrers.

Washing Ores and Minerals.—A simple form of apparatus for washing ores, minerals and other metalliferous earths, whether of the richest or poorest descriptions, has been patented for Messrs. Baron, of Paris. It consists in the employment for that purpose of a long tapered vessel, partially filled with water, open at the top, and provided near its surface with a corresponding shaped trough, slightly inclined downwards towards its narrow end.—This trough receives a longitudinal vibratory motion from a crank or eccentric on the main actuating shaft of the machine, and it also receives a simultaneous rocking motion in a lateral direction. The bottom of the vessel has a number of closed apertures for removing the deposit that collects thereon, which are nearer together as they approach the narrow end of the vessel, at which part they are separated by double inclined partitions. The feeding hopper is provided with a rose jet at its discharging mouth, which directs a number of fine streams upwards into the minerals or ores contained therein, such minerals or ores having been previously crushed. The richest ores or minerals pass down the vibrating trough, and fall over at the end, being thus deposited at the narrowest end of the vessel, whilst the refuse matter and poorer particles are shaken over the sides of the trough before arriving at the end thereof, the poorest being shaken over at the top end of the trough, and the better descriptions lower down, so that each aperture will give a richer product as they approach towards the narrowest end of the vessel. The water in the vessel is stagnant—that is to say, it is not changed constantly by having a current flowing through the vessel, as is the case in other washing machines.

Made Land on the Sacramento River.—Mr. Smith, of Smith's famed gardens, says the Sacramento *Bee*, has made us acquainted with a fact interesting as going to show the great changes constantly being made in the surface of the country by the action of floods and streams. Others have no doubt noticed the fact to which we allude, but it is not probable that one in a hundred are acquainted with it. In 1849, when Mr. Smith located in his present situation, he built his house on the bank of the American river. At that time the surface of the bank was thirty feet above the surface of the river at low water. Since then the river has so changed its course and deposited sediment that now the bank of the river is at least one hundred yards from where it formerly was, and where the water flowed in 1849 is now as high land as there is in the vicinity, covered with a thick growth of trees from twenty to forty feet in hight. Not only this, but the surface of the land in that vicinity is two to four feet higher than it was in 1849. Then the river, at low water, was thirty feet lower than the bank; now it is not more than twelve feet lower. This shows that in addition to the creation of several acres of productive land the bed of the river has, by deposits from above, been filled up nearly twenty feet since 1849. It would be interesting to know what changes have been produced in other portions of the valley by the action of the rivers and deposits of earth borne down from the mineral regions.

Air and Ocean.—The air is made up of a mixture of two gases, oxygen and nitrogen, and it always contains considerable watery vapor and carbonic acid. In his new work on Chemistry, Professor Youman states, that if all the air were reduced to its average density at the earth's surface, it would extend five miles high, and that if the above constituents were arranged in layers one over the other, we should have first, at the bottom, a bed of water all over the earth's surface 5 inches deep; next a layer of carbonic acid 13 feet deep; next above, a layer of oxygen gas about one mile deep; and above this a layer of nitrogen gas about 4 miles deep. This will help the memory.

Sea water contains about 4 ounces of salt in every gallon. Estimating the ocean to average two miles in depth, the salt if separated in a solid bed would line the bottom of the entire ocean to the depth of 140 feet.

Sickness not Causeless.

There never can be disease without a cause; and almost always the cause is in the person who is ill; he has either done something which he ought not to have done, or he has omitted something which he should have attended to.

Another important item is, that sickness does not, as a general thing, come on suddenly; as seldom does it come, as a house becomes enveloped in flames on the instant of the fire first breaking out. There is generally a spark, a tiny flame, a trifling blaze. It is so with disease, and promptitude is always an important element of safety and deliverance. A little child wakes up in the night with a disturbing cough, but which, after a while, passes off, and the parents feel relieved; the second night the cough is more decided; the third, it is croup, and in a few hours more the darling is dead!

Had that child been kept warm in bed the whole of the day after the first coughing was noticed, had fed lightly and got abundant warm sleep, it would have had no cough the second night, and the day after would have been well.

An incalculable amount of human suffering and many lives would be saved every year, if two things were done uniformly. First, when any uncomfortable feeling is noticed, begin at once, trace the cause of it, and avoid that cause ever after. Second, use means at hand to remove the symptoms; and among these, the best, those which are most universally available and applicable, are rest, warmth, abstinence, a clean person, and pure air. When animals are ill, they follow nature's instinct, and lie down to rest. Many a valuable life has been lost by the unwise efforts of the patient to "keep up," when the most fitting place was a warm bed and a quiet apartment. Some persons attempt to "harden their constitutions" by exposing themselves to the causes which indnce their sufferings, as if they could, by so doing, get accustomed to the exposure, and ever thereafter, endure it with impunity. A good constitution like a good garment, lasts the longer by its being taken care of. If a finger has been burned by putting it in the fire, and is cured over so well, it will be burned again as often as it is put in the fire; such a result is inevitable. There is no such thing as hardening one's self against the causes of disease. What gives a man a cold to-day will give him a cold to-morrow, and the next day, and the next. What lies in the stomach like a heavy weight to-day will do the same to-morrow; not in a less degree, but a greater; and as we get older, or get more under the influence of disease, lesser causes have greater ill effects; so that the older we get the greater need is there for increasing efforts to favor ourselves, to avoid hardships and exposures, and be more prompt in rectifying any "symptom," by rest, warmth, and abstinence. —[Hall's Journal of Health.

Change in the Meaning of Words.—How many words men have dragged downward with themselves, and made partakers, more or less, of their own fall! Having originally an honorable significance, they have yet, with the deterioration of those who used them, or about whom they were used, deteriorated or degenerated too. What a multitude of words, originally harmless, have assumed a harmful meaning as their secondary lease; how many worthy have acquired an unworthy! Thus "knave" meant once only no more than lad (nor does it now, in German mean more.) a "villain" was no more than peasant; a "hoor" was only a farmer; a "varlet" was but a serving man; a "menial" one of the many or household; a "churl" but a strong fellow; a "minion" a favorite. Sylvester says: "Man is God's dearest minion." "Time-server" was used two hundred years ago as often for one in an honorable, as in a dishonorable sense, "serving the time!" "Conceits" once had nothing conceited in them; "officious" had reference to offices of kindness and not of busy meddling; "mood" was that which pertained to a man's mood, without any gloom of sullenness implied. "Demure" (des mœurs—or good manner) conveyed no hint, as now, of an over-doing of the outward demonstrations of modesty. In "crafty" and "cunning" there was nothing of crooked wisdom implied, but only knowledge and skill; "craft" indeed, still retains very often its more honorable use—a man's craft being his skill, and even the trade in which he is skilled.

A New Mode of Preserving Meats has been discovered, which consists in forcing brine into the arteries, veins, and capillaries of the carcasses by pressure. After the articles have been thus cleansed by the first charge, a mixture is introduced, consisting of six and a half gallons of brine, ten pounds of sugar, and three quarters of a pound of saltpetre, with an infusion of clove and pepper. The meat is then cut up, thoroughly dried, and packed in sawdust and charcoal. It is said that it will keep in any climate, and that it possesses the greatest amount of nutritive matter.

At a Factory in Sacramento 10,000 brooms have been made during the year last past.

Danger of Checked Perspiration.

There are two kinds of perspiration, *sensible* and *insensible*. When we see the drops of water on the surface of the body as the result of exercise, or subsidence of fever, that is *sensible perspiration*, perspiration recognized by the sense of sight. But when perspiration is so gentle that it cannot be detected in the shape of water-drops when no moisture can be felt, when it is known to us only by a certain softness of the skin, that is *insensible* perspiration, and is so gentle that it may be checked to a very considerable extent without special injury. But to use popular language which cannot be mistaken, when a man is sweating freely, and it is suddenly checked, and the sweat is not brought out again in a very few moments, sudden and painful sickness is a very certain result.

What, then, checks perspiration? A draft of air while we are at rest, after exercise, or getting the clothing wet and remaining at rest while it is so. Getting out of a warm bed and going to an open window or door, has been the death of multitudes.

A lady heard the cry of fire at midnight; it was bitter cold; it was near, the flames illuminated her chamber. She left the bed, hoisted the window, the cold chilled her in a moment. From that hour until her death, a quarter of a century later, she never saw a well day.

A young lady went to her window in her night clothes to look at something in the street, leaning her unprotected arms on the stone window-sill, which was damp and cold. She became an invalid, and will remain so for life.

Sir Thomas Colby being in a profuse sweat one night, happened to remember that he had left the key of his wine cellar on the parlor table, and, fearing his servants might improve the inadvertence and drink some of his wine, he left his bed, walked down stairs, the sweating process was checked, from which he died in a few days, leaving six millions of dollars in English funds. His illness was so brief and violent that he had no opportunity to make his will, and his immense property was divided among five or six day-laborers who were his nearest relatives.

The great practical lesson which we wish to impress upon the mind of the reader is this:—When you are perspiring freely, *keep in motion* until you get to a good fire, or to some place where you are perfectly sheltered from any draft of air whatever.

The Benefits of Exercise.—Exercise is health-producing, because it works off and out of the system its waste, dead, and effete matters; these are all converted into a liquid form, called by some "humors" which have exit from the body through the pores of the skin; in the shape of perspiration, which all have and which all know is the result of exercise, when the body is in a state of health. Thus it is that persons who do not perspire, who have a dry skin, are always either feverish or chilly, and are never well and never can be as long as that condition exists. So exercise, by working out of the system its waste, decayed, and useless matters, keeps the human machine "free"—otherwise it would soon clog up and the wheels of life would stop forever! Exercise improves the health, because every step a man takes tends to impart motion to the bowels; the proper amount of exercise keeps them acting once in every twenty-four hours. If they have not motion enough, there is constipation, which brings on very fatal disease; hence exercise—especially that of walking, wards off enumerable diseases, when it is kept up to an extent equal in inducing one action daily. Exercise is healthful, because the faster we breathe, we take that much more air into our lungs; but it is the air we breathe which purifies the blood, and the more air we take in the more perfectly is that process performed. The purer the blood is the better the health must be. Hence, the more the consumptive stays in the house, the more certain and speedy is his death.

Rapid Marches.—The following are some of the most remarkable cases of rapid marches on military record:

Roman infantry marched frequently a distance of 20 miles in 5 hours, each soldier carrying from 50 to 80 pounds baggage. Cæsar's legions marched 450 leagues in 23 days. In 1800 McDonald marched 40 miles in a single day, crossing rivers and climbing mountains. Clavel, after most extraordinary efforts at the battle of Salamanca, retreated 40 miles in 12 hours. In 1814 Napoleon marched his army, for the purpose of succoring Paris, 75 miles in 36 hours. Gen. Crawford, in Spain, marched 3,000 men 62 miles in 26 hours. In 1802 Wellington's cavalry in India marched 60 miles in 32 hours. Before the battle of Furruckabad, in India, the English cavalry, under Lord Lake, are said to have marched 70 miles in 24 hours.

Oil wells have lately been discovered near Visalia. The flow is said to be very large and in a crude state. It burns brilliantly as refined oil.

MINING SHARE MARKET.

The sudden depreciation in the Mining Share Market, alluded to in our last issue as having been noticed in the closing transactions of Friday of last week, has proved more serious than we then supposed it would. The market, in fact, has been subjected to a fresh panic, which has involved nearly every stock in the list, the most of which have largely declined. The most unfavorable symptom connected with this movement is the fact that it has fallen upon leading stocks, which have hitherto been relied upon as giving character and tone to the matket. No sustaining power is as yet visible to which we can look as a means for restoring confidence and arresting the downward tendency of stocks. Still the impression is beginning to obtain that the crisis is over and that an improvement must be immediately manifested. It is to be hoped that such anticipations may be fully realized.

Ophir is held quite firmly at $735, although one or two small sales have been made during the week as low as $700.

Gould & Curry has met with an unusual large business. Three hundred and seventy feet have changed hands since our last report. Opening on Saturday at $2,500, it declined in the afternoon to $2,150; sold on Tuesday at $1,840, and then at $2,225; fluctuated from $1,520 to $1,640 on Wednesday, Thursday and Friday. A slight improvement and increased business was manifested before last evening's board. The closing sales were made at $1,620. Various causes are assigned for the remarkable depression and material fluctuation which this stock has manifested during the past week. Accounts from the mine are various and conflicting. In the absence of any official statement from the Superintendent or Trustees, speculation would be worse than useless. The usual monthly dividend is confidently expected.

Chollar has met with considerable business, but at generally declining rates. It has dropped, during the week, from $500 to $400, its closing figure before yesterday's board.

Nevada, Justice Ground, has met with but a single transaction during the present week—two shares changed hands yesterday at $50.

North American has materially declined with considerable business. Opening at $90, it has gradually dropped to $62½—with sales of 215 feet.

North Potosi has met with a good business at fluctuating rates. Opening at $55, it advanced to $80, on Tuesday, from which it gradually declined to $62½ yesterday.

Lady Bryan met with an ordinary business at slightly declining rates until Thursday and Friday, when it was in large request at improved prices Upwards of 600 feet changed hands yesterday, more than the entire sales of the previous five days.

Uncle Sam has dropped from $650@$610.

Yellow Jacket is firm at previous figures—$750@$775.

Baltic is still held at $40, and Melones at $12.

Savage has dropped, during the week from $1,800@$1.200.

Imperial, after weakening a little during the early part of the week, rallied, and closed firm at previous figures.

Potosi has failed to maintain its advance of last week It has receded to its previous figure and may now be quoted at $1,000.

Golden Age and Empire still remains firm. This company has declared another dividend payable to-morrow.

For farther quotations we refer to our tabulated reports.

The Mining Laws of California.—H. B. Congdon has placed upon our table a copy of of the third Edition of his compilation of Mining Laws of California. So many additions and changes have been made since the publication of the first and second editions, that a third is imperatively called for. The work before us embraces the Mining Laws of California and Nevada Territory, and the Code of Mining Ordinances of Mexico, of 1783, complete, together with several important devices subsequently issued. It also contains a full and complete Digest of all the Decisions of the Supreme Court of California, bearing upon the subject of mining. The 'Forms" have also been carefully revised and made to conform to the demands which the latest legislation and experience demands. For sale by H. H. Bancroft & Co., Montgomery Street. It is a much needed work. We refer our readers to the advertisement of the work in another column.

Blake's Quartz Crusher.—We would call the attention of our readers to the advertisement of Blake's Quartz Crusher, which will be found in another column. This machine, which is one of the most economical rock breakers ever devised is the invention of Eli Whitney Blake, a nephew of the inventor of the cotton-gin, and is being rapidly introduced at our prineipal quartz mills for the purpose of breaking up the hard quartz preparatory to its being fed to other machinery for pulverization. These machines are already in operation, in Washoe, at the Silver State Reduction works, Land's Mills, Booth & Dalle's mill, and one has just been constructed at the Golden State Works, in this city, for the Santiago mill. It is stated that one of these machines, kept fully at work, will effect a saving of $75 per day over the ordinary manner of breaking rock. This machine was illustrated and noticed in full in our issue of January 16th, 1863. It is well worth the attention of all quartz mill men and especially those who are working upon a large scale.

Dividend.—The Eureka Gold Mining Company have declared a dividend of 1½ per cent. on their capital stock, payable on and after Tuesday last, at their office, 214 California street.

Fourth of July Orators.—Hon. E. D. Wheeler will deliver the Fourth of July Oration, at Santa Rosa. R. Guy McClellan has been engaged to speak on the same occasion at San Andreas.

Santa Clara College.—We acknowledge the receipt of the annual prospectus and catalogue of the Santa Clara College. The Faculty and other officers of this institution number twenty three. The number of Students is 211.

Narrow Escape.—Thos Shone, Alexander Matheson, and C. Tempel came near loosing their lives by the premature explosion of a blast in the Fort Ross Coal Company's mine, Sonoma county, on Wednesday, the 15th instant.

Saw Mill Burned.—The mill owned by Columbus Carlton, on Russian River, Bodega Township, was burned on the night of the 16th, together with seventy thousand feet of lumber, involving a loss of six thousand dollars.

The Petaluma *Journal* says it bears great complaint from many farmers that the late high winds have shattered out the ripening grain to such an extent that in many instances the grain will hardly be worth cutting.

Crops of Australia.—The crops of Australia have proven nearly a total failure this year. In most cases the wheat, owing to rust, was not worth threshing, while catterpillars and other insects devoured the rye and oats.

Several hundred men are engaged in grading a wagon road from the head of navigation on the Colorado river to Salt Lake. The distance is about 400 miles.

The all-important subject of the irrigation of the lands of San Joaquin valley, engrosses the attention of the agricultural community of that region.

The Yolo county newspaper has been removed to the county seat, and is now issued under the name of the *Woodland News*.

A Robbery of the stages containing the treasure forwarded in the care of Wells, Fargo & Co., from Virginia, took place on the 30th ult., near Perrin's Station, N. T. The stages were close together, and filled with passengers when in turning a short bend in the road, the lead horses of the first stage were seized and stopped. The robbers, who were armed with shot-guns and revolvers, demanded Wells, Fargo & Co's Express treasure, counseling the passengers to keep still if they wished to be unharmed. The gang then took from the first stage seven sacks of bullion, and from the treasure safe about $2,000 in gold coin. A dispatch from Placerville dated July 1st, at 2–15, P, M. states that a fight occurred between the highwaymen and parties sent in pursuit and gives the following particulars.

Upon reaching the Somers House, Mr. Staples having been assured by the landlady that the gang were in the house, procured a shot-gun, and opening the door informed them that they were his prisoners. Whereupon they fired instantly, killing Staples and wounding Mr. Renny. Staples wounded one of the gang in the head. The robbers robbed Staples's body of his watch, and would have killed Renny had not the landlady pleaded for his life. The gang say that they are good Jeff Davis men, and are not to be taken by any officers.

A party is just leaving for the body of Mr. Staples, and the wounded prisoner. The other five had left, declaring that they would return for their wounded friend. Mr. Staples has long been a resident of and office holder in El-Dorado County having occupied the responsible position of Deputy Sheriff for some time past. The latest dispatch states that there is great excitement in Placerville and the Towns adjacent in regard to the death of Staples.

Collision.—The Opposition Steamer Washoe was run into by the Yosemite, last evening, at the wharf at Benecia, and so seriously injured that she was immediately run upon the flats, just above the landing, to prevent her from sinking. Much indignation was manifested by the passengers on both boats, at what is said to be the culpable carelessness, to give it no harsher name, of the pilot of the Yosemite.

Yesterday, July 1st, was the beginning of the fiscal year 1864-65, and the following new officers entered upon their respective duties: George Cofran, Superintendent of Streets; Charles R. Story, Tax-Collector, and the newly elected Supervisors qualified last night. The outgoing officers have won and will wear the laurels of success, and the incoming ones have the full confidence of the community.

Yesterday, Maj.-Gen. McDowell assumed command of the Department of the Pacific. Gen. Wright continues in command of the District of California. Gen. McDowell announces Captains Haven and Cutting as Aids-de-Camp.

Mr. Bingham, the efficient and reliable Clerk of the Board of Supervisors, has, with an energy worthy of notice, succeeded in reducing the mass of papers under his control to an "absolute system," and on last evening presented to the Board of Supervisors a report that is a model one.

Dividend.—The Golden Age and Empire have declared another dividend, payable to-morrow. Professor Silliman has examined this mine and made a very favorable report with regard to its condition and prospects.

A Good Day.—On Wednesday of last week bullion valued at $108,732 96 was shipped to this city from Virginia. It was the largest shipment ever made in one day from that place, and weighed over two tons.

The Owen's River *Herald* is the name of a new semi-monthly newspaper. It is published at Bend City, in the Owen's River Valley.

The Potosi Report.—Prof Silliman's report of this important mine from the Mercantile Gazette of to day, will be found in our present issue.

F. Holton, a nephew, it is said, of General Butler, has recently been placed in the Stockton Insane Asylum.

WASHOE MINING ITEMS.

The Belcher Mining Company which declared its first dividend only a few weeks ago is in a fair way to pay dividends hereafter that will outdo its first one. We understand that it has during the present month taken out upwards of $50,000, and is taking out as much and as rich rock now as ever before.

The Green Company is drifting to the northeast along its ledge, and is taking out considerable quartz as it follows it along in that direction, but not enough to pay for crushing. The quartz is considerably mixed with dead-rock, and although it is of very good quality, it cannot well be separated from the worthless rock with which it is mixed. A considerable amount of pay rock was taken out a short time since, which was crushed and yielded very well. It was taken from the same ledge which is now being prospected, but at a point farther to the west.

The Central American Company continues to drive work ahead on its new shaft with all its former energy, notwithstanding the hard times. It employs three shifts of workmen, who relieve each other every eight hours, and so keep work going on all the time, both night and day. Its shaft is down about eighty feet. It is in firm ground, and has not been timbered yet. The ledge which this company is sinking for lies a little to the west of the shaft, and will be reached by a drift which will be run from the shaft after it has been carried down a short distance further. The company expects to find it rich where they intend to open it, which will be about a hundred and fifty feet below this level.

Coppers Company.—This company is drifting south on its ledge, and in doing so finds the latter to improve in appearance, size, and quality. A short distance south of the shaft is a ridge, or rise of ground, and when the drift came under this, the ridge was found to rise correspondingly. It has been found to be almost universally the case that when there is a raise in the surface of the ground through which a ledge runs, that the ledge also raises; and this, in all cases, whether the ledge crops out or is a blind one.

Overman.—Having placed their new pump in position, the Overman Company started up on Wednesday last, prosecuting the work of hoisting ore and exploring their claim. The pump has a ten-inch bore, and is driven by a separate engine from that used in hoisting. The water is pumped up to within 200 feet of the surface, where it is discharged into a drain tunnel leading out to a ravine. Cheering news may be expected from this mine shortly.

The Savage Company keeps at work sinking its mammoth shaft. It is now down 130 feet. It requires 500 feet of lumber and timber to line the shaft for every foot that is sunk at the present rate in which it is being constructed. Then, the intention is to put on machinery which will excel in power anything yet erected along the Comstock range. The great depth to which this company has already gone, and the much greater depth to which it intends to go with its mining works, calls for much more powerful machinery than has yet been brought to this Territory for mining purposes.

The Minerva and Omega Companies' hoisting-works are being hurried forward. The frame-work for each company is in an advanced state. The machinery has not yet arrived upon the ground, but is expected every day.

At the depth of 340 feet the La Plata Oro Company have experienced such an influx of water that they have found it impossible to hoist it out with a whim.

The Mexican Mine is shipping a large amount of ore daily to various reduction works.

Work is being vigorously prosecuted on some dozen different claims in Flowery.

A flagstaff is to be planted on the top of Mount Davidson on the Fourth, from which the starry banner wil be displayed.

The Milton Company are going to get out fifty tons of ore from their mine for crushing. It is thought it will pay well.

New this Week.

Great Western Tunnel and Mining Company,
Aurora, N. T.

Notice is hereby given that a Stockholders' Meeting of the above company will be held in this city, in the office of the Company, No. 20 Exchange building, corner Washington and Montgomery streets, on Saturday, August 6th, 1864, at 2 o'clock P. M. By order of the Board of Trustees.

JOSEPH C. FORD, Secretary.

Correspondents in New York, LEES & WALLER, No. 33 Pine street.

Correspondents in London, BANK OF LONDON.

THE UNDERSIGNED GIVE NOTICE THAT THE ABOVE named corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and with the interior of this State, the neighboring State and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with amp e facilities, and in conformity with articles of association will commence operations on the fifth day of July next, at the Banking House now occupied by Donohoe, Ralston & Co., corner of Washington and Battery Streets.

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. Mills and Wm. C. Ralston as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in all business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members:

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each Certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Trustees:

D. O. Mills, Louis McLane, Wm. Norris, Jno. O. Earl, Herman Michels, W. C. Ralston, J. B. Thomas, Thos. Bell, A. C. Peix, O. F. Giffin, Jas. Whitney, jr.

San Francisco, June 18th, 1864. 26-1m

NOTICE.

THE COPARTNERSHIP IN THE BANKING BUSINESS heretofore existing between Eugene Kelly of the city of New York, and Joseph A. Donohoe, Wm. C. Ralston, and Ralph S. Fretz, of San Francisco, under the firm name of EUGENE KELLY & CO., New York, and DONOHOE, RALSTON & CO., San Francisco, will cease on the 1st day of July 1864, Eugene Kelly and Joseph A. Donohoe withdrawing from the copartnership.

The business will be settled in New York by Eugene Kelly, and in San Francisco by Wm. C. Ralston and R. S. Fretz.

Depositors are requested to hand in their books for settlement at the banking house of Donohoe, Ralston & Co.

EUGENE KELLY,
(Per J. A. Donohoe, attorney,)
JOSEPH A. DONOHOE,
WM. C. RALSTON,
R. S. FRETZ.

San Francisco, June 13, 1864.

THE UNDERSIGNED, CALLING ATTENTION TO THE above card, give notice that on and after the first day of July next, they will continue the business of the above copartnership without interruption, at the old banking house of Donohoe, Ralston & Co., in this city, under the firm name of FRETZ & RALSTON, and in New York through the agency of Messrs. LEES & WALLER, No. 33 Pine street; and that on and after the 5th day of July next, they, together with D. O. Mills, J. B. Thomas, Louis McLane, Asa T. Lawton, Wm. E. Barron, Thos. Bell, Jno. O. Earl, Wm. Norris, J. Whitney, Jr., O. F. Giffin, A. J. Pope, Herman Michels, Frederick Billings, Geo. H. Howard, H. F. Teschemacher, A. Hayward, Moses Ellis, A. B. McCreary, R. M. Jessup, Samuel Knight, A. C. Wilmerding and Wm. Alvord of San Francisco, and Jacob Korn, of Portland, Oregon, being formed for that purpose duly incorporated under the laws of this State, will carry on the business of banking in all of its various branhees at the same place and through the same agency, and upon the basis of a Gold and Silver currency, under the name of

THE BANK OF CALIFORNIA.

D. O. MILLS and WM. C. RALSTON will be charged with the management of the business of the Corporation.

WM. C. RALSTON,
R. S. FRETZ.

San Francisco, June 15, 1864. 25-1m.

NOTICE.

THE COPARTNERSHIP IN THE BANKING BUSINESS heretofore existing between Eugene Kelly, of the city of New York, and Joseph A. Donohoe, William C. Ralston, and Ralph S. HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation on Sutter st., between Montgomery and Sansome, in the rear of the Vulcan Forge Machine Shop, where miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.

1-4t W. A. H. TOWN, Secretary.

Lloyd's New Amalgamator
Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 6 0 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15½ ozs. Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold.....$73 33
Silver.....42

To the Ton.....$73 75

The assay being made by Messrs. Molitor & Co.

From 20 pounds of the same ore, worked for the same party, was obtained:

Gold.....$63 30
Silver.....04

To the Ton.....$63 34

Assay made by Kellogg, Hewston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $8 per ton. Varney's Pan has obtained as high as $15 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 54.2 per ton; and over the works at the mill, $62 54.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $0.19, Silver, $1.52, amounting to $2.71-100—equal to $361.33-100 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Doetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 65 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. G. Rowell, was obtained $7.48 in gold, $0.25 in silver—$7.69—equal to $2.6.18-100. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.58-00—equal to $152 to the ton. Difference in favor of Lloyd being $154.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and is certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other matters, can be addressed to the care of Messrs. Kustel Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a larger percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Albany Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through the screen and forced under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surfaces to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of gold again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS YARNEY.

scp21

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general use and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS,

NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

IMPROVED WATER-WHEEL,

—PATENTED BY—

JOHN TYLER, WEST LEBANON, N. H.

GIVING THE MAXIMUM POWER WITH THE MINIMUM COST—HAVING THE FOLLOWING AS SOME OF ITS ADVANTAGES OVER OTHERS—GIVING THE BEST PER CENTAGE OF WATER USED, DURABILITY.

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated Wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

Mining Notices.

Advertised in Previous Issues.

Aspinwall Gold and Silver Mining Company,

Amador District, Lander County N. T.

Notice is hereby given that at a meeting of the Trustees of said Company, held on the 10th day of June, 1864, an assessment of fifty cents (50) per share was levied upon the Capital stock of said Company, payable immediately, in U. S. Gold Coin, to the Secretary, at the office of the Company, 429 Pine street, San Francisco, or to J. E. Bowie, at Amador City, N. T.

Any stock upon which said assessment shall remain unpaid on the 15th day of July, will be advertised as delinquent, and unless payment shall be made before, will be sold on the 31 day of August, A. D. 1864, to pay the said delinquent assessment, together with cost of advertising and expenses of sale.

24-4t JOSEPH HEALY, Secretary.

Astor Ledge and Company, Big Creek District,

Lander county, Nevada Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of May, 1864, an Assessment of fifty cents per share was levied upon the capital stock of said Company, payable immediately, to the Secretary, at No. 3, Armory Hall, 3d floor, corner of Montgomery and Sacramento streets, San Francisco.

Any stock upon which said assessment shall remain unpaid on the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 4th day of August, 1864, to pay the delinquent assessments, together with costs of advertising and expenses of the sale.

S. PURDY, Secretary.

Office, Armory Hall, corner Montgomery and California streets, San Francisco. 25-4t

Amador Consolidated Silver Mining Company,

Amador District, Lander County, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 21st day of June, 1864, an assessment of Four Dollars per share was duly levied, upon the capital stock of said company, payable on the 27th day of June, 1864, in gold coin of the United States of America, to the Secretary, at the office of the Company, No. 623 Washington street, in the city of San Francisco.

Any stock upon which said assessment shall remain unpaid on the 27th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 8th day of August, 1864, to pay the delinquent assessments and cost of advertising and expenses of sale. F. S. GARTER, Secretary.

26-5t Office, 623 Washington street, San Francisco.

Augusta Gold and Silver Mining Company, Augusta District, Lander County, N. T. Office, 406 Front street, San Francisco, June 22d, 1864.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held November 2d, 1863, an assessment, No. 1, of twelve and a half (12½) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No 2, of twelve and one half (12½) cents per share was levied upon the Capital Stock of said Company. Both assessments, Nos. 1 and 2, payable immediately, in United States gold coin to the Treasurer, at the office of said Company, or to John Moffet, Superintendent of said Company, at the mine, in Nevada Territory.

Any stock upon which said Assessment shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with costs of advertising and expenses of the sale. JOHN SHAW,

26-5t President.

Blue Dragon Mining Company, Inyo District, Tulare County, California.

26-td

Silver Creek Mining Company.—Location, Keys District, Mona county, California.

Notice is hereby given, that, at a regular meeting of the Board of Trustees of the above named Company, held on the 30th day of May, 1864, an assessment of fifty (50) cents per share was levied on each and every share of the capital stock of the Company, payable immediately, in U. S. gold coin, to the Secretary, at his office, or to the Superintendent, at the mine.

Any stock upon which the assessments shall remain unpaid on the 25th day of June, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 18th day of July, 1864, at 1 o'clock P. M., at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale. J. F. MILLER, Secretary.

Office, No. 416 Washington street. San Francisco, June 10th, 1864, 24-4t

Steamboat Silver Mining Company, Star District, Humboldt Co., Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 25th day of May, 1864, an assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States Gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on SATURDAY, the 16th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on TUESDAY, the 2d day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. O. PUTMAN, Secretary.

Office, N. E. cor. Jackson & Front streets, up stairs, San Francisco. 25-4t

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Slaters Gold and Silver Mining Company, Augusta District, Lander county, N. T. Office, 406 Front street, San Francisco, June 22, 1864.

Notice is hereby given, that a meeting of the Trustees of said Company, held October 17th, 1863, an Assessment, No. 1, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No. 2, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Both Assessments, No. 1, and No. 2, payable immediately, in United States gold coin to the Treasurer at the office of said Company, or to John Moffet, Superintendent, at the mine, in Nevada Territory.

Any stock upon which said Assessments shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with cost of advertising and expenses of sale.

25-4t J. FRANK MILLER, President.

Santa Clara, June 1st, 1864. 24-4t

Vivian Gold and Silver Mining Company, Blue Sulphur Springs District, Lyon county, N. T.

The second annual meeting of the Stockholders of the Vivian Gold & Silver Mining Company, for the election of Trustees for the ensuing year, will be held at the office of the Company, 728 Montgomery street, on Wednesday, July 6th, 1864, at 8 o'clock, P. M.

24-4t HENRY S. FITCH, Secretary.

Wm. Mitchell Gold and Silver Mining Company, Silver Mountain, Amador County, Cal.

Notice is hereby given that at a Meeting of the Board of Trustees of said Company, held on the 16th day of June, 1864, an Assessment of one dollar per share was levied upon the Capital Stock of said Company, payable immediately, in United States gold or silver coin, to the Secretary, at his office.

Any stock upon which said Assessment shall remain unpaid on the 21st day of July, 1864, will be advertised on that day, as delinquent, and unless payment shall be made before, will be sold on FRIDAY, the 5th day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale. By order of the Board of Trustees A. C. WOOD, Secretary.

Office, S. E. Corner Montgomery and Pine streets, San Francisco. 26-4t

White Mountain Consolidated Mining Company.—Location: White Mountain District, Mono county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of the above named Company, held on the 6th day of June, 1864, an Assessment of fifteen (15) cents per share was levied on each and every share of the capital stock of the Company, payable immediately, in U. S. gold coin, to the Secretary, at his office.

Any stock upon which the assessments shall remain unpaid on the 9th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before will be sold, on the 20th day of July, 1864, at 1 o'clock P. M. at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco. The costs of advertising and the expenses of the sale will be added to the delinquent assessments. J. F. MILLER, Secretary.

Office, No. 416 Washington street. San Francisco, June 10, 1864, 24-4t

Winona Gold and Silver Mining Company, Moss Lode, San Francisco District, Arizona Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 7th day of June, 1864, an Assessment of twenty-five cents per share was levied upon the Capital Stock of said Company, payable on the 11th day of June, 1864, in United States gold and silver coin, to the Secretary, No. 11 Government House, City and County of San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 9th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 27th day of July, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale.

EDW. QUACKENBUSH, Secretary.

Office, No. 11, Government House, cor. Sansome and Washington streets. 24-4t

Wellington Gold and Silver Mining Company. Wellington Ledge, No. 2, South Catalina Island.

Notice.—There are delinquent upon the following described stock, on account of Assessment levied on the 9th day of May, 1864, the several amounts set opposite the names of the respective shareholders, as follows:—

Names.	No. Certif.	No. Shares.	Amt.

And in accordance with law, and an order of the Board of Trustees made on the 28th day of May, 1864, so many shares of each parcel of said stock as may be necessary will be sold at the office of the Secretary, on the 16th day of July, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessments theron, together with costs of advertising and expenses of sale.

WM. G. WENDELL, Secretary.

Office, 240 Montgomery Street, corner Pine, San Francisco. 1

NOTICE.

Notice is hereby given that a meeting of the Stockholders of the Moscow Gold and Silver Mining Company will take place on Monday, August first, 1864, at 4 o'clock P M. All shareholders are requested to be present as business of importance will be brought before the Company. By order of Trustees. OEO. STURTEVANT, Secretary.

1-5t Office, 608 Montgomery street.

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "SLIGHT COLD" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. *"Brown's Bronchial Troches"* give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in the pocket and taken as occasion requires.* Agents for California,

1-1m REDINGTON & Co., San Francisco.

Empire Gold and Silver Mining Company,

Rock Spring District, San Bernardino County, California.

Notice.—There are delinquent, upon the following described stock, on account of Assessment levied on the 31st day of May 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors. | SAN FRANCISCO, SATURDAY, JULY 9, 1864. | VOLUME IX. Number 2.

Contents of Present Number.

No. 2—Volume IX.—July 9, 1864.—Department of Agriculture; No Cause for Despondency; Letter from Austin; Gun Cotton vs. Gun Powder; Scientific Explorations; Election of Officers; Brief Mention; Open Sesame Company; Wide West Company; Wall Street Gamblers; The Blue Ledge; Mining Share Market; Iron the Basis of Modern Industry; Quite a Novelty; Gold Productions; Mining Shareholders' Directory; Roasting Silver Ores; Ductility of Gold; Copper Smelting in California; Brain Work and Longevity; Copper Smelting at Detroit; Beecher's Visit to a King; Man's Only Power Over Nature; Mechanical and Patent Department—Labor Saving Machinery, Heavy Forging, New Inventions, Peitsch's Ore Separator, Washing and Pressing Machine, Improved Knapsack, Dodge's Amalgamating Machine; Summary of Mining News—Washoe, Reese River, Esmeralda, Owens River, Humboldt, Arizona, Holcomb Valley, Santa Catalina; Cricket War; Gold Hill Mines; Novel Cooking; Stock Reports and Miscellaneous Items.

The Mining and Scientific Press is published every Saturday morning. Each number contains SIXTEEN PAGES of SIXTY-FOUR COLUMNS. Terms, by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very fair.

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

Election of Officers.

North Superior Copper M. Co.—Meeting, July 5. Trustees, A. J. Ford, Wm. Bell, C. Fancher, James Marlatt. President, Wm. Bell; Secretary, T. B. Sherman; Treasurer, A. J. Ford; Superintendent, S. W. Collins.

North Star G. & S. M. Co.—Meeting, July 4. Trustees, W. C. Harrington, S. Haas, R. W. Heath, J. A. Drinkhouse, Joseph Aaron.

Diana G. & S. M. Co.—Meeting, July 4. Trustees, D. E. Buel, Asaph Gray, J. W. Harker, A. B. Gayle, J. A. Drinkhouse.

Whitlach G. & S. M. Co.—Meeting, July 4. Trustees, H. H. Allen, Asaph Gray, W. H. Sharp, J. A. Drinkhouse, J. W. Harker.

Camanoe G. & S. M. Co.—Meeting, July 5. Trustees, A. Gray, J. W. Harker, W. H. Sharp, A. B. Gayle, A. A. Simonds. President, J. W. Harker; Secretary and Treasurer, W. T. Reynolds.

Independent G. & S. M. Co.—Meeting, July 5. Trustees, A. Gray, A. B. Gagle, J. W. Work, G. A. Pitney, W. T. Reynolds. President, A. Gray; Secretary and Treasurer, W. T. Reynolds.

Leland G. & S. M. Co., Arizona,—Meeting July 7. Trustees, Dr. Isaac Rowell, C. W. C. Rowell, William Packard.

Harris G. & S. M. Co.—Meeting July 5. Trustees, C. Martin, A. Caselli, H. Dreschfeld, F. Mondelet, A. G. Chauche, A. M. Chapelle, J. L. Schroeder. President, C. Martin; Secretary, Hugo Dresch feld; Superintendent, G. W. Green.

Pioneer Coso G. & S. M. Co.—Meeting, July 6, 1864. Trustees. Warren Holt, Israel Crane, E. Cazalis, Francis G. Burke and W. P. Loring.

A Novel Gift.—Captain Cushing, of the Paul Pry, presented to the Sanitary Fair at Stockton, a *fac simile* of the steamer Cornelia, made of confectionery, with the stars and stripes pinned to the halyards. The whole was represented as floating upon a sea of greenbacks, which were thus artistically arranged, to the sum of $200.

NO CAUSE FOR DESPONDENCY.

For the last few weeks there has been an absolute dearth of mining news from the various localities within the State of California. Whether this silence is mainly to be attributed to inattention to such matters on the part of local papers, or whether the streams and gulches have completely dried up, from personal observation, we are unable to say. This much, however, we do know; that at no time since 1849, have we heard so little of placer mining in this State as at the present time. Persons from the interior assure us that there is a solemn reality in this condition of things, and that little or no improvement can be hoped for in the way of this description of mining, until the heavens once more open their windows and pour upon us that much needed blessing—water.

The ditches, they tell us, as a general thing, are nearly dry; the reservoirs upon which they have heretofore mainly relied for their summer supply are empty, and, indeed, have not been filled during the past winter. What little rain we had came so late that where it fell upon the mountains, in the shape of snow, it was upon ground not frozen, and hence could not remain a sufficient length of time to fairly "pack," consequently the earliest summer weather soon melted away the yielding mass; and thus this great natural reservoir—the packed snow of the mountains—has proven quite as unreliable as the artificial reservoirs constructed and filled by the hand of man.

Gloomy and unpromising as these facts now appear, at first sight, the picture is not altogether without its brighter side. The daily receipts of bullion from the interior have not yet been affected, except in a favorable manner, while our treasure shipments thus far, for the present year, are largely in excess of the last. From this we may fairly infer that the real and permanent mining interests of the State are beyond the reach of any contingency growing out of the seasons. Our quartz mining interest is that upon which we most depend, and the increased influx of bullion, under the above unfavorable conditions, is one of the most gratifying industrial facts upon which a Californian can dwell. There can be no mistake with regard to its import.

With these facts in view, we can even look upon the present disastrous stock panic as a thing of trifling importance, purely speculative and ephemeral in character, and in no wise endangering the permanent prosperity of this Coast.

There is nothing particularly alarming in even the unprecedented depreciation in mining stocks which we have witnessed during the past few months. That some mines on which large sums have been expended have proved failures, and that others have been grossly mismanaged, is a matter to be seriously regretted; but these things establish nothing against the general value of mining investments, so long as the receipts of bullion continue to increase. No one, at all acquainted with mining on this coast, can for a moment doubt that we have opened many mines of great value — many which never have and probably never will be heard of in any of our stock boards; but which will continue for years to yield immense treasures to their fortunate proprietors. More such are constantly coming to the knowledge of those who are in the way of informing themselves in this particular.

As we have already said and repeated in previous numbers of the Press, the recent fluctuations and present depressions in mining stocks, will in the end work to our advantage rather than detriment, by putting a check upon reckless speculation, and teaching our citizens to confine their operations and investments to legitimate channels. They will from this experience learn to exercise the same degree of caution in buying mining stocks that they do in making investments in real estate. Let such precaution be the rule, and a death blow will be dealt to wild-cat schemes, and mining on the Pacific Coast will be found as reliable as any other business.

DEPARTMENT OF AGRICULTURE.

We received by the last steamer, sundry public documents, and among them the first annual report of Isaac Newton, Esq., Commissioner of Agriculture. It will be recollected that an act of Congress was passed in May, 1862, establishing a "Department of Agriculture," the object of which, according to the terms of the Act, is to "acquire and diffuse among the people of the United States useful information, on subjects connected with agriculture, in the most general and comprehensive sense of that word, and to procure, propagate and distribute among the people new and valuable seeds and plants." Mr. Newton was placed at the head of this Department, and the volume before us contains the first annual report therefrom. It forms a book of 632 pages, 120,000 copies of which have been printed by order of the House of Representatives for general distribution among the people for whose benefit the information it contains has been collected. We have as yet had but little time to examine the volume, but so far as we have done so, it appears to be filled with valuable and well digested matter of especial interest to all agriculturists, and of more of less general interest to every person who seeks to inform himself with regard to the miscellaneous and particular interests of the agricultural productions and developments of our common country. There is scarcely a single department of agriculture which is not treated upon more or less in detail, and no farmer or gardener can fail to derive from its perusal much that will be interesting as well as valuable. The introductory remarks form a well written and very interesting paper in which the magnitude of the interests intimately connected with or growing out of agriculture are briefly considered. Agriculture is justly pronounced "the most ancient, the most honorable, and the most indispensable of all the occupations of man. The Commissioner gives a rapid glance at the improvements which successive ages have wrought in this department of knowledge, and the progress made in our own country in latter years, as well as the especial operations of this new Department since its organization, some two years since.

The Department of Agriculture is intended to relieve the Patent Office of the labor heretofore assigned as a portion of its duty in collecting and reporting upon agricultural matter. In so doing the great interest of agriculture is assigned that special prominence which its importance most fully demands.

It is to be hoped that Congress, having taken a proper and important step in this direction, will, at an early day, follow up this move by another step, and place the great and growing Mining Interest of our country also in its appropriate position, as a separate bureau, with a competent gentleman at its head. Scarcely if any less good would grow out of such a move than we hope to see result from the new Department, of which the first annual report is now before us.

Farmers and others desiring copies of the Agricultural Report should write to any one of our members of Congress, whose duty, as well as pleasure, it will be to answer such requests by forwarding copies so desired to any address which may be specified. The large edition published will allow of their very general distribution.

THE CYPRESS WITH THE LAUREL.

Another anniversary of our country's birthday has come and passed, and here on the shores of the peaceful Pacific we have hailed its advent with an enthusiasm worthy of the time, the place, and the occasion. Along our spacious streets, flag-spangled with the glorious hues of our national emblem, marched a stately procession enlivened with the glitter of a thousand bayonets and the martial trappings of a mighty host of our military, dignified by the presence of the silver hairs of those who have grown old in the service of our noble State, and glorified, nay almost consecrated, by the host of children whose gladsome voices, as they marched, cheered a pean to our country, one and indivisible. The deep-voiced cannon boomed a thundering halelujah through the air, and when night unwillingly closed her sombre curtain over us, the very firmament was lurid with the glare of rockets and many colored lights. 'Tis well that it should be so. But let us not forget with it all, that every wreath of laurel that we throw with willing hands to our conquering heroes, who are even now marching on with irresistible tread toward the doomed city—the strong hold of treason—there is entwined the solemn sprig of cypress; and now that our wild shouts of exultation and songs of glad jubilee have died away on the evening breeze, let us turn aside to drop a silent tear and breathe an unheard prayer ove the graves of that phalanx of brave hearts and strong arms who, feeling that the

> "Proper place for man to die,
> Is where he dies for man,"

have laid down their lives in defense of Right, Liberty and Union; and with all our laurels let us not forget to twine the cypress.

IRON THE BASIS OF MODERN INDUSTRY.

Iron may be regarded as the basis of modern industry, and the multiform uses to which it is applied illustrates, with peculinr clearness, the progress of inventiou, and the relation of mechanical art to the improvement and enlightenment of civilized society. Smile, in his "Industrial Biography," says:

"The Roman colonists were the first makers of iron in Britain on a scale of any magnitude. They availed themselves of the mineral riches of the country wherever they went, exploring the mines and quarries, and carrying on the smelting and manufacture of metals in nearly all parts of the island. Their principal iron manufactures were in quarters most conveniently situated for transportation, especially in the southern counties, and on the borders of Wales. * * *

"The working in iron was carried on to a very considerable extent in the Middle Ages by the monks, some of whom were excellent craftsmen. Thus, the celebrated St. Dustan, an English monk, who by his severity of life and pretended miracles, gained unbounded influence in, and indeed governed, England during the reign of Edwy the Fair, about the year 955, was a skilled blacksmith and metallurgist. He is said even to have had a forge in his bedroom, where occurred his celebrated encounter with Satan. Another monk, called Anketil, who flourished in the twelfth century, was so famous for his skill as a worker in iron, silver, gold, jewelry, and gilding, that he was invited by the King of Denmark to be his goldsmith and banker. The abbotts of monasteries situated in the iron districts, among their other labors, devoted themselves to the manufacture of iron from the ore. They were well acquainted with the art of forging, and early turned to account the wealth of the mineral districts.

"In course of time, the smiths of particular districts began to distinguish themselves for their excellence in special branches of ironwork, and gradually became manufacturers. Thus the makers of swords, tools, hits, and nails congregated at Birmingham, and the makers of knives and arrow-heads at Sheffield. Chaucer speaks of the Miller of Trompington as provided with a Sheffield whittle. The common English arrow-heads manufactured at Sheffield were long celebrated for their excellent temper, as Sheffield iron and steel plates are now."

In the year 1750, the British Parliament passed an act prohibiting the erection of rolling and slitting mills in America, and the restrictions thus imposed upon the iron business of the Colonies effectually prevented the commencement of new enterprises, while those already established languished into insignificance, and were limited to the production of pig-iron and castings. Only a few furnaces continued to exist in the New England and the Atlantic States. A great portion of the pig-iron was exported to England, and manufactured articles of wrought iron or steel returned therefrom. In 1771, the Colonies shipped between 7,000 and 8,000 tons of pig-iron.

Various causes combined to check the spirit of the colonists for discovery or enterprise, more particularly the sudden cessation of friendly and commercial relations between the United States and Great Britain, on the outbreak of the war of 1776, when this country was thrown upon its own resources, and the events transpired around them absorbed all the time and energies of the people. They had made such little progress in the art of producing iron, that they were but illy prepared to meet the new and extraordinary demands now to be made on them; skill, experience, facilities, capital, all were alike wanting; and now that war was upon them, all unprepared as they were, but few foundries were found possessing the facilities or skill for casting cannon, or the temerity to venture upon the undertaking. The effects of this utter abnegation of the principles of self-dependence was now most keenly felt. The gradual progress which had for a period of over a century and a half uniformly characterized the development of the great mining enterprises was suddenly arrested, and the very life of the Colonies placed in jeopardy. The supplies of ore from Massachusetts and New Jersey afforded sufficient material for sustaining some ten or a dozen furnaces only, and Bridgewater, Mass., and Westville, Ct., supplied the army with cannon; at the former place, by Hon. Hugh Orr, who cast and bored his cannon; in the latter, by Mr. Elijah Bachus, who welded together bars of iron for the same purpose. On the whole, the time for the war of 1776 could not have been better selected, had they consulted the welfare of the Colonies. At the commencement of the crisis, the position of the colonial trade was not encouraging, by reason of the policy pursued by the mother country, while the prohibitory measures, restrictions, and levies were burdensome in the extreme. The War of Independence was carried on, with alternating fortunes, till the year 1781; when, in October of that year, Lord Cornwallis surrendered himself and his army to General Washington, and from that time all expectation of subduing the Americans was at an end.

The natural advantages possessed by Great Britain was a powerful incentive to her unexampled success, which, coupled with the new inventions, accumulation of capital, the development, in close juxtaposition, of iron ore and coal, and not far from the sea-coast, together with her politic legislation, so firmly established the iron interests in that country, that successful competition by any other nation was not possible, until, like her, it had developed its own mineral resources and wealth. Thus it is that, while the iron interests of Great Britain have expanded and prospered to the great detriment of other nations, and her annual production amounts to something like 4,000,000 tons, that of the United States amounts to scarcely 1,000,000 tons, notwithstanding the immense richness of the mines, the extent of its mineral productions being greater than all Europe, and the immense and increasing demands for home consumption, together with the fact that "the materials for making a ton of iron can be laid down in the United States at the furnace with less expenditure of human labor than any part of the known world, with the possible exception of Scotland." The census of 1860 returned 884,424 tons of pig-iron, valued at $19,487,799, showing an increase of 44.4 per cent. upon value returned in 1850. Of bar and other rolled iron, 406,298 tons, valued at $22,248,799, showing an increase of 39.5 per cent. over the aggregate products of the rolling-mills and forges for 1850. The following table shows the gradually increasing annual production of iron, entirely charcoal:

Year.	Tons.	Year.	Tons.
1810	54,000	1842	230,000
1820	20,000	1846	765,000
1828	130,000	1847-8	800,000
1829	142,000	1849	659,000
1830	165,000	1850	564,755
1831	191,000	1853	500,000
1832	200,000	1855	1,000,000
1840	315,000		

Later data show a greatly increased ratio, and the subsequent history of the iron trade, both at home and abroad, is one of unexampled prosperity and success. The production of so great a quantity of iron, especially bar iron, and the demand for large quantities from abroad, tell of the gigantic strides the country has taken in the improvements in the engineering arts, in mechanism and machinery, in the innumerable instruments of science and art, both for peace and war, for the field or factory, and in the manufacture of household wares of every conceivable variety. We have iron light houses, iron crystal palaces, iron churches, iron bridges, iron vessels of war. We now use iron roofs, iron bedsteads, iron ropes, iron fences, iron pavements, etc.

American Mining Magazine.

Gold Production.—M. Chevalier, whose treatise has been translated by Mr. Cobden, says that there was as much gold extracted from the mines of the world within the ten years which followed the year 1848, as during the 366 years preceding—that is to say, during the whole time that America has been known to Europeans. During the three and a half centuries which preceded the discovery of the California mines, the whole amount of gold brought to the markets of Christendom was $2,000,000,000, while the annual receipt is now about $205,000,000, from all sources of supply. Humboldt estimated that, at the commencement of the present century, all the countries from which Christendom drew its supplies of gold produced annually about $17,000,000, and M. Chevalier estimates that, of this amount, only about $12,000,000 found its way into Christendom. In sixty years the annual production has risen to more than $200,000,000, and the annual addition to the stock on hand in the Christian States, to nearly $19,000,000. If these estimates are correct, the amount of gold in the States of Europe and America was nearly doubled between the years 1848 and 1858—or allowing a few years for the development of the mines, it would be safe to say, that the quantity of gold now in the Christian world is twice as great as it was when the California mines were discovered in 1848.

There is considerable opposition in London to the further construction of underground or tunnel railways. Sir Joseph Paxton, the well known architect, says their extension would be an unbearable nuisance; the amount of steam which would escape would give the Londoners "the atmosphere of a washing tub"

ROASTING SILVER ORES.

The subjoined process of roasting silver ores as practiced at Joachimsthal Eislehern, Prussia, presents several peculiarities which will doubtless be found useful and interesting to all persons engaged in the process of extracting silver from its ores. The ores are delivered to the furnaces in a pulverized condition. It may be proper to premise that the ores treated at the above mentioned localities are remarkable for the great variety of their constituent minerals. More than a hundred different species of these ores have been described. Among them may be mentioned the various compounds of silver, with copper, lead, bismuth, uranium, iron, nickel and cobalt, with sulphur, arsenic, antimony, etc. The fuel used is brown stone coal, wood and charcoal.

THE PROCESS.

The usual long narrow hearth, broad-fire-bridge, and short fire-place, is here replaced by a hearth 9 feet 9 inches across, and 6 feet in the direction taken by the flame—that is, between the fire-bridge and the chimney. The fire-bridge, instead of being 2 feet broad, as is the case with many English furnaces, is but 6 inches; and the fire-place, instead of passing along but about one-third of the size of the furnace, is four-fifths as long as the hearth. The advantages secured by these proportions are obvious to one observing the action of the apparatus. The broad and short hearth makes possible an equal and high heat over its whole surface; the long fire-place allows no portion of the charge to remain in remote corners, beyond the reach of the intense fire, forming what is called "*dead space*," and the narrow fire-bridge absorbs less heat, and allows the flames to have a more direct effect upon the contents of the hearth, than where a broad mass of brick-work intervenes between the grate and the roasting ore.

The fire-bridge is a tube of cast iron, protected by a heavy coating of clay, and having 8 or 10 small openings on the side toward the hearth. A boiler attached to the furnace, but heated with a separate fire, produces steam, with a pressure of about 4 lbs. to the square inch, and this can be conducted, when desired, through the tubular fire-bridge, and allowed to stream out of the apertures upon the roasting ore.

The crushed ore is placed in charges of 4 cwt. upon the hearth of the above described furnace, and treated with a light fire of wood and stone coal. As a portion of the sulphur and other volatile substances that render the mass fusible, are driven off a stronger fire is made and continued until the charge is drawn. Vapor is not admitted at first, but when the ore has reached a red heat, the pipe communicating with the boiler is opened, and as much steam allowed to pass over the heated surface as is possible, without decreasing its temperature below that necessary for the proper chemical changes to go forward. This the workman readily perceives by the color of the ore upon the hearth.

In four hours the first process is complete, and the ore which has not been allowed to rise to a sufficiently high temperature to clot, is drawn, permitted to cool, mixed with about 6 per cent. of common salt, and carried to a mill, where it is ground to a fine powder. It is brought now, a second time, to the furnace, to undergo what is known as the "*good roasting.*"

Three hundred weight are treated at once, in this case, the powder being first intimately mixed with 6 to 12 per cent. of common salt, the amount depending on the composition of the ore, and with 2 to 3 per cent. of iron vitriol. This mixture is placed upon the hearth. In about an hour after being brought under the influence of the fire, a red heat is reached, then vapor is let on as before, and stirring commences. The fire is gradually made stronger, and the ore is moved back and forth with the rake of the workman, for a period varying from 6 to 16 hours, depending upon the nature of the ore, when it is taken from the furnace, and passed through a sieve.

The object of adding the salt is to form a chloride with the silver; and the vitriol furnishes a means of decomposing the salt when a sufficient quantity of sulphates are not otherwise present, and the steam makes the combination of the chlorine and the silver more certain, and by condensing the vapors in the chimney and in chambers arranged for the purpose, thus catching the finely divided and chemically combined silver before it can reach the open air, produces a saving of 10 per cent. of the precious metal, thus in fact making practicable this method of treating rich silver ores.

The Largest Vineyard in the world is in California. It is in Sonoma county, and covers an area of four hundred acres, and is owned and managed by the "Buena Vista Vinicultural Society."

Ductility of Gold.

Gold leaf is usually employed to illustrate the extreme ductility of gold; but the film of gold on the surface of gold lace is not more than one-tenth the thickness of ordinary gold leaf. The making of the wire which constitutes the covering of the silken thread out of which gold lace is made is a most curious and wonderful piece of mechanism. The process of its manufacture is as follows:—

In the first place, the refiner prepares a solid rod of silver about an inch in thickness; he heats this rod, applies on the surface of a sheet of gold leaf, burnishes this down, and so on, until the gold is about one-hundreth part the thickness of the silver. Then the rod is subjected to a train of processes which brings it down to the state of a fine wire; it is passed through holes in a steel plate, lessening step by step the diameter. The gold never deserts the silver, but adheres closely to it, and shares its mutations; it is one-hundreth part the thickness of the silver at the beginning, and it maintains the same ratio to the end.

As to the thickness to which the gold-coated rod of silver can be brought, the limit depends on the delicacy of human skill; but the most remarkable example ever known was brought forward by Dr. Wollaston. This was an example of solid gold wire without any silver. He procured a small rod of silver, bored a hole through it from end to end, and inserted in this hole the smallest gold he could produce; he subjected this silver to the usual wire-drawing process, until he had brought it to the finest attainable state—being, in fact, a silver wire as fine as a hair, with a gold wire in its center. To isolate this gold wire he subjected it to warm nitrous acid, by which the silver was dissolved, leaving a gold wire one-thirty-thousandth of an inch in thickness—perhaps the thinest round wire that the hand of man has yet produced. But the wire, though beyond all comparison finer than any employed in manufactures, does not approach in thinness the film of gold on the surface of silver in gold lace, which is not above one-tenth the thickness of ordinary gold leaf.

Unrecorded Exports.—The Washoe *Herald* says that the published reports of shipments of treasure from Washoe gives a false account of the actual treasure exports from that region. It claims that not more than two-thirds of the amount which actually goes forward is reported. As a proof of this that paper states that the average shipments per week from Silver City, for months past, has exceeded $7,000, which never appears on the way-bill of the express companies from there, and consequently is never mentioned in the papers. The very large quantity shipped from Empire City is also never mentioned in the papers, nor that shipped from Gold Hill. Were all these quantities added to the list from there, it would be seen that the mines are yielding fully 100-per cent. more than they did this time last year.

Jewish Sepulchres.—The Sultan has offered to sell the vaults where the eminent Jews of antiquity are interred, for a large sum of money, to those who have complained that the graves of the good old pious teachers were desecrated by adventurers, travellers, and scientific men from abroad. Negotiations are now going on, and it is believed the Jews will pay the exorbitant price to preserve the graves and sepulchres of their ancestors free from the touch of the hands of foreigners who look upon sacred relics as curiosities.

The Utah Mines.—The *Vidette* says that an assay of rock taken from five of the prominent ledges in Rush Valley, U. T., was lately made by Professor Eaton, of New York city, (now at Bannock). The ledges thus tested were the Quandry, Potomac, Constitution, Union and Eureka, and the average of the assays resulted in $195 in silver, and $39 34 in gold per ton. The specimens were taken from the ledges by the Professor himself, who is recognized as an eminently skillful and reliable assayer.

The Copper Mines of the United States are numerous along a line extending from the northern boundary of the State of Vermont to the St. Lawrence below Quebec. The breadth of the belt of land varies from fifteen to twenty-five miles, and it contains copper pyrites, sulphurets and carbonates of copper in strata of argillaceous schist—the same kind of rock which contains the auriferous veins of North Carolina and Canada. The northwestern coast of Nova Scotia also affords auriferous quartz.

Ohio and California are the great wine producing States, so far. In 1860, Ohio produced 562,640 gallons, and California 464,516. At the present time the latter State must be far in advance, as her greatest progress in this line has been within the past three years. Ohio has been long engaged in the business, and has progressed but slowly.

COPPER SMELTING IN CALIFORNIA.

It is a matter of much regret that the pioneer establishment for smelting copper on the Pacific coast should be shut up for an apparently indefinite period of time. We have understood that these works, located at Antioch, at the junction of the Sacramento and the San Joaquin rivers, are idle, in consequence of some disagreement among the Trustees. If such is the fact we should suppose that their own interests, to say nothing of those of the public, would be best promoted by a speedy settlement of any differences which may exist.

In the meantime it is a matter of no little gratification to state that numerous other establishments, are in process of erection, or already completed, in this city, and other portions of the State more closely connected with the mines, where the reduction of copper ores to a regulus of from 50 to 75 per cent, or even finer, will be attempted. We shall make especial attempts to secure early and full reports of the results of their various efforts to introduce the smelting of copper ore into this State.

Connected with this subject there is much of interesting and useful enquiry, which is of importance to the growing development of the copper mining interest of this State. We have been long seeking improvements in milling machinery, as connected with gold and silver quartz mining, and with much success. It is generally conceded that American mechanics and miners have done much, very much, in improvements in this direction. Our improved machinery is already beginning to attract considerable attention in other countries, where mining operations have undergone but little change, save in the introduction of steam and gunpowder, for centuries. In this we have done, and are still doing, good service for the present and future generations.

In view of the progress which we have made in this direction, who can say that the process of stamping and washing copper mineral has reached its *ultimatum* of perfection? Already we hear that extensive experiments are being made in this line, the results of which, so soon as they are reduced to a reliable shape, we shall hasten to lay before our readers.

Again, we have much to learn, both from experience here, and from inference from the practice of other countries, with regard to smelting. How low a percentage of ore is it economical to submit to the furnace, or in other words, to what degree of concentration shall we submit our ores? This is a question which appears, as yet, quite in the dark, even in old copper mining regions. Much, however, in settling this question, depends upon surrounding circumstances—the facilities of water and crushing power, cost of fuel, transportation, etc. The theory that vein matter containing a low per centage of metalliferous matter, cannot be profitably reduced by fire, instead of by crushing and concentrating, seems to be losing ground in many places abroad, as well as in this State. Practical men are still much divided upon the matter. There are said to be copper mines in Europe, which have long been placed upon the dividend-paying list, where the plan of reducing the poorer ores by heat is necessarily employed, owing in some instances to the character of the ore, and in others to the impossibility of obtaining the desired quantity of water for washing. Many of these mines produce as low a percentage of ores as those which are entirely discarded in this State as worthless. Besides containing less copper, the ores thus treated generally contain more foreign mineral substances than are found in California veins, and hence require a greater nicety of treatment, and a more complex process of refining. Why cannot the poorer ores of California be generally subjected to a fire process rather than a working process, for concentration? This question can be answered in some form, at an early day. Nearly every mining locality in California has all the necessary materials at hand for the construction of cheap furnaces for reducing the ores of copper to a regulus of a greater or less degree of fineness, and we earnestly desire that those who are already engaged in such experiments, or who may hereafter embark therein, will report to us, at an early day, the result of their operations, be they successful or otherwise. Any information of this kind, which it may be desirable to communicate confidentially, shall be kept as such, and made public only by permission of parties so communicating, or as the experiments in progress may from time to time suggest.

Brain Work and Longevity.

Philosophers ought to have length of days for their portion, seeing how their pursuits ought to elevate them above the disturbances of life. And such is, in fact, the operation of their mode of life, by which their faculties are furnished with constant entertainment on subjects which would seem to lie outside the range of uneasy passions, while creating or exciting the noblest moral emotion. And an unusual amount of longevity is, in fact, found among philosophers—whether mathematicians, naturalists, or speculative students. Such things have been heard of as strife in those serene fields of thought; such things have been seen as faces furrowed with fretfulness, or working with passion: but the old age of many philosophers is, at this moment, an honor to their vocation. Peter Barlow was; when he lately died at eighty-two, the same Peter Barlow that he had been to two generations of friends and disciples. Sir David Brewster is still active and occupied at the same age. The late Mr. Tooke did not puzzle his brain about the currency too much to be still up to the subject at eighty-six. Sir Roderick Murchison is past seventy, and so is Sir J. Herschel. Literature ought to have the same operation as science; but it seems to have more room for agitations and anxieties, except in the case of authors who live in and with their words, exempt from self-regard. Jacob Grimm was a very perfect example of the philosophic serenity which a literary career can yield: and he lived to seventy-eight. There is something remarkable in the longevity of literary women in modern times, even if we look not beyond our own country. Mrs. Piozzi and Mrs. Delany perhaps scarcely enter within the conditions; and the still lamented Jane Austen was under an early doom from consumption; but Miss Edgeworth was above eighty when she died; Joanna and Agnes Baillie were older still; and Mrs. Trollope died the other day at eighty-four. The artists who have departed lately have been old. Biot was eighty-seven, and Vernet seventy-four. Our Mulready was seventy-seven, and Cockerell, the architect, was seventy-three.—*Once a Week.*

"There's a Man in it!"—The confidence reposed in Lieut. Gen. Grant by President Lincoln, and the cordiality which exists between these distinguished men, were happily illustrated by a characteristic anecdote related recently by the President in the course of a familiar conversation with a personal friend. In reply to a question in regard to the present military prospect, Mr. Lincoln, with that peculiar air which he always puts on when about to tell a good story, said:—"Well, sir, your question reminds me of an anecdote about the automaton chess player, which many years ago astonished the world by its skill in that game. After awhile the automaton was challenged by a celebrated player, who to his great chagrin, was beaten twice by the machine. At the end of the second game, the player, significantly pointing his finger at the automaton, exclaimed in a very decided tone, '*There's a man in it.*' And this, sir, is just the secret of our present success."

Circulation of the Blood.—The all-wise Creator has so arranged the venous blood, by imparting to it a peculiar power which chemists call an affinity for oxygen, that when fresh portions of venous blood arrive at the lungs, and come into contact with the atmosphere, the air is immediately decomposed; the oxygen remains in the blood. And should the process of the absorption of oxygen by the blood be arrested but for a few minutes, life would become extinct; hence the importance of looking around us, and seeing that nothing enters the circulation with the blood, whose chemical action is in the least degree antagonistic to those chemical affinities which the Divine hand has impressed on the vital fluid.

The Strongest Bank in the World.—The Bank of Genoa, which has been in existence hundreds of years, has, perhaps, proved itself the strongest institution of the kind in the world. It is a remarkable fact in its history, that its administration has always been as permanent and unchangeable as that of the republic has been agitated and fluctuating. No alteration ever took place in the mode of governing and regulating the affairs of the bank, and two sovereigns and independent powers, at war with each other, have been within the walls of the city, without producing the slightest shock to the bank, or causing it to secrete any of its books or treasures.

COPPER SMELTING AT DETROIT.

Probably the most extensive and profitable Copper Smelting establishment in the United States, is that known as the "Waterbury and Detroit Copper Smelting Company," located about two miles below the city of Detroit, in the state of Michigan. It is a private company, and the details of its business have never been made public. Common report, however, states that the profits of the establishment are very large; at all events the works have been continued with great diligence for some twelve years, and the metal turned out at this establishment, it is said, readily brings $20 per ton more than that from any other establishment in the country. The amount of copper produced there has averaged, for several years, about 4,000 tons. One year it reached 5,000. The last year's work, however, did not exceed 3,500 tons, on account of the scarcity of labor at the mines for producing the ore; the greatly enhanced price of the article, however, brought the aggregate value of the yield of this establishment quite up to that of any previous year, viz: a little over $2,000,000—the average price being nearly $620 per ton. There are four smelting establishments in the country employed chiefly in smelting ores from the Lake Superior mines; one at Cleveland, Ohio, one at Pittsburg, Pa., one directly in the mining district, and the fourth in Detroit. The Detroit Commercial *Advertiser*, from which we condense the above facts, gives the following description of the works at Detroit:—

The buildings embrace four refining furnaces, and two cupola blast furnaces, and they stand at a convenient distance from the river, with a substantial dock in front for the purpose of receiving the ore and shipping the metal in its manufactured form. The ore is brought down in vessels from the several mines, and after being smelted, the copper is shipped to New York, Philadelphia, and Boston, where, from its superior quality, it commands a higher price by one cent per pound than any other copper in market. The ore differs in purity, yielding from seventy to eighty per cent of pure copper. The mineral, as it is received at the works, is first placed in refining furnaces, and being subjected to a sufficient heat, the pure copper, in its molten state, tends to the bottom of the furnace, whilst the rocky substances, having a less specific gravity, rise on the top, when by suitable implements, they are removed. This excrescence is called "slag" and is afterwards intermixed with lime rock and submitted to the intenser heat of the blast furnace, when considerable copper is further extracted from it, which is run into large sand moulds in iron frames, which when filled, are suffered to cool, and the contents is emptied in large masses, weighing probably four hundred to six hundred pounds, and recouveyed to the refining furnaces, where it is mixed in with fresh ore. When sufficiently heated, the whole contents undergo the process of separating the iron and sulphur, by a simple process, and being carbonated by burning green wood in it, a process which requires great experience and skill, it is ready to be turned out into moulds. It is cast in the shape of ingots and bars, the former weighing about 16 lbs., and the latter 100 or 150 lbs. The ingots are packed in large and substantial barrels and sent off to the Eastern markets. The bars are nearly a yard long, and about three inches square, somewhat tapering at one end, and are designed chiefly for wire, an immense amount of which is manufactured annually in this country.

Water Meters in Philadelphia.—All large consumers of water in Philadelphia, are to be charged hereafter by the gallon. Mr. Birkinbine, the Chief Engineer, has issued a circular announcing that water meters will be introduced at the expense of the consumers, and bills collected quarterly at the following rates: From one thousand to ten thousand gallons per day, two cents per hundred gallons. From ten thousand to twenty thousand gallons per day, one and a half cents per one hundred gallons. From twenty thousand gallons per day and upward, one cent per hundred gallons.

Not Only in London.—It is said there is scarcely a newspaper in London in which three or four fortunes have not been sunk, and by which as many persons have been ruined. Money goes very fast in a newspaper, for the drain is a steady one, week by week, without pause—a process that will soon empty the wealthiest pocket. What is true in London, we suspect is true the world over.

The Humboldt *Register* says that many strangers are arriving in the Humboldt mining districts.

Beecher's Visit to a King.

Henry Ward Beecher, in a late number of the N. Y. *Independent*, relates, in the following characteristic manner, the particulars of a "visit" which he made to the King of Belgium:—

When I was in Ghent, at the request of the American Minister, I consented, in the hope of doing some good to our country, to call on the King of Belgium. It would not do to go without some preparation. As to borrowing a Court suit, I would not; but I did consent to get a white vest; and I did consent to get some white gloves; and I did consent to get a stiff hat. When I had got myself arranged for going to Court, in a manner unlike that to which I had been accustomed, I procured a splendid carriage and started. As I rode through the streets, all the boys looked at me, and I felt very much like a fool going to court. And as I came to the king's residence, I thought that the soldiers knew that I was dressed up for the first time in my life in such things—which was the fact. I did not know what to say to the servitors at the foot of the stairs, or to the servitors at the top of the stairs; but I made my way along somehow, and they conducted me through the hall and whisked me at once before the king. He is a venerable personage. He speaks the English language beautifully. He is the mentor, he is the adviser of European monarchs. If you were to see him dressed in ordinary clothes, you would think him a plain American citizen. But he was dressed from the crown of his head to the sole of his feet, in all sorts of beautiful things and ornaments. He walked toward me in a very stately manner, with his sword rattling on the floor by his side, and I walked toward him in the best way I could. He bowed, and I bowed. We walked together, and I called him "Sir" all through, and said a good many things that I should not have said. I could not get it out of my head that I was not afraid of the King, and that I was afraid of doing something disreputable. I wanted to observe court forms, but the very desire to do so rendered the thing impossible. I saw that he knew it, for he smiled benignantly, and seemed to have a fatherly consideration for me. Finally, in leaving the room, I ought to have backed out. I did go backward for one or two steps, but then I turned and whisked through the door face foremost.

Man's only Power over Nature.

The one operation of putting things into fit places for being acted upon by their own internal forces, and by those residing in other natural objects, is all that man does, or can do, with matter. He only moves one thing to or from another. He moves a seed into the ground; and the natural forces of vegetation produce in succession a root, a stem, leaves, flowers, and fruit. He moves an axe through a tree, and it falls by the natural force of gravitation; he moves a saw through it, in a particular manner, and the physical properties by which a softer substance gives away before a harder, makes it separate into planks, which he arranges into certain positions, with nails driven through them, or adhesive matter between them, and produces a table, or a house. He moves a spark to fuel, and it ignites, and by the force generated in combustion, it cooks the food, melts or softens the iron, converts into beer or sugar the malt or cane-juice, which he has previously moved to the spot. He has no other means of acting on matter than by moving it; motion, and resistance to motion, are the only things which his muscles are constructed for. By muscular contraction he can create a pressure on an outward object, which, if sufficiently powerful, will set it in motion, or if it be already moving, will check, or modify, or altogether arrest its motion, if he can do no more. But this is not enough to have given all the command which mankind have acquired over natural forces immeasurably more powerful than themselves; a command which, great as it is already, is without doubt destined to become indefinitely greater. He exerts his power either by availing himself of natural forces, in existence, or by arranging objects in those mixtures and combinations by which natural forces are generated; as when by putting a lighted match to fuel, and water into a boiler over it, he generates the expansive force of steam, a power which has been made so largely available for the attainment of human purposes.

Depth of the Sea.—Capt. Sir John Ross made some enormous soundings at sea, one of which, 900 miles west of St. Helena, extended to the depth of 5,000 fathoms, or 30,000 feet, or nearly 5¾ miles; the weight employed amounting to 450 pounds. Another, made 300 miles west of the Cape of Good Hope, occupied 49½ minutes, in which time 2,226 fathoms were sounded. Capt. Denham sounded in the South Atlantic, 7,706 fathoms, or nearly 7.7 geographical miles.

Letter from Austin.

Editors Press:—In a letter headed "Reese River Mining Disputes," written hy R. Y. Anderson, under date of June 4th, 1864, I find, among other matters spoken of, an alleged deseription of the manner of forming the so called Bunker Hill District, etc. There is hnt little in that part of the communication which I have snfficient interest in to correct. I believe the party nssailed as "jumpers," are able to contradict, if not the whole, at least the greater part of Mr. Anderson's statement. But so far as concerns myself and the company with whom I am connected, and in which my name appears so conspicuously, I beg leave to offer the following facts, for which I can produce proof that cannot be disputed: At the time the Gold Point ledge was located, it was not recorded under protest. Mr. Anderson, furthermore, was not at that time in Summit, nor did he ever record the same in Bunker Hill, Summit or any other district. Furthermore, he told me in the presence of some of the most respectable men in Austin, that he was entirely ignorant of Dr. Goodfellow's ever claiming the Gold Point, as the Iroquois, and that he, Anderson, never wrote to or knew the party; that he published a etatement in the *Alta California*, bearing date March 29th, 1864, about the Gold Point, to which I replied, April 20th, contradicting the same. I was then in hopes that Goodfellow & Co. would improve their time in finding claims instead of locating holders, etc. * * * * The Gold Point Gold and Silver Mining Company was recorded in Summit district, by Fonly, and is not in litigation either with Goodfellow & Co., or with any other party. * * * Mr. Anderson furthermore says that the Gold Point Company (Herrin & Co.) jnmped a part of Pleasant Valley Ranch. If to locate 45½ acres of land out of 6000 acres claimed hy Goodfellow & Co., to select the location for five mill sents, and improve the same by building and fencing, and offering the same to any party or parties who will put up a 21 stamp mill, could be called a disadvantage to that country, I would like to know it. The Gold Point Company is ready and willing to guarantee, free of charge, one or more mill sites, on Bunker Hill Creek, running through the town of Bunker Hill, which contains a plenty of water for one or a dozen steam mills. We will also put onrselves under obligations to furnisb tbem, out of the Gold Point and Pbœnician, rock that will supply twenty mills, and pay $75 per ton for crushing tbe same. I could also name a dozen other ledges, in this vicinity that would do the same—such as the Brown, Real del Monte, Jackson, Morning Star, Victoria, Reindeer, Warren, and Green Mountain Boy.

We believe it much more profitable and honorable to open one good ledge, than to adopt the policy of Goodfellow & Co., to run over the country and locate wild cat, have it incorporated in San Francisco, reserve the proceeds and have the bonest miner cbeated out of his wagee. The miners in and nround Bunker Hill and Summit know this to be a fact, and they despise ths course that Goodfellow, Anderson and Co. are taking, as all good men should do. This shows who the party is that has retarded the interest of the Big Smoky country. And tbis is tbe only reason why I notics Anderson's communication, and not for the purpose of bringing wild cat stock, like tbe Iroquois into market, by placing it in competition with one of the No. 1 ledges of this noted district. I trust your sense of justice will induce yon to give au insertion to this correction in your most valuable paper.

Yonrs, J. C. Herrin.

Austin, Jnne 29, 1864.

The Camanche.—There is at last a fair prospect that the Camanche will bs speedily put np. Mayor Coon, of this city bas received tbe following dispatcb, dated Washington July 6th:

The Navy Department will proceed to put up the *Camanche* very soon. They are anxious that no further complication shall be added by the city ndvancing. Jno. Conness.

Wall Street Gamblers.

A New York correspondent says:—The wild gamblings in stocks and gold have tbrown to tbe surface a new set of men. Formerly the Board of Brokers and men who dealt in stocks were men of character and fortune. The entrance fee to the Board guaranteed respectability. But now harriers are of no service. De-perate and reckless men have taken to the street. Any man who can raise from fifty to a hundred dollars sets up stoek gambling on his own account. These men know no bounds and no rules. They are on the ground early and late. Tbey fill up Williams street so that it is impassable for teams They yell and scream like madmen, and can he heard for blocks. Men unacquainted witb them would imagine from their outeries that a pestilence had broken out or that the enemy had landed at the Battery. A new Board made up of this class have opened a room on Brond street, near the Custom House. It is open day and night. The fortunes that are lost in and arouud Wall street every week are marvelous. No romance can equal the reality of reverse of fortune which daily transpires. No gamblers are more reckless, desperate, or suddenly destroyed. Many a man leaves his palatial residence in the morning a fancied millionare, and he goes bome at night a ruined man. His elegant equipage, in which his bejeweled wife, and proud daughters whirled the dust of the Park the day before in the eyes of well to-do citizens plodding their way on foot, is sold—the resideuce abandoned—the man sccdy and forlorn, appears in tbe outskirts of the crowd of Jews and brokers, and the family go into "the country to spend tbe summer with their friends." They are seen no more in ths fasbionable world.

Tbe fact is, gamhling is gamhling, call it by whatever name you will. Fortunes are made now, as they ever have heen made, in the good old-fashioned way. Permanent success waits on diligence, patience and integrity. Our reckless style of living, extravagance and dissipation follows the wild spcculations that mark thc trade of New York to day. It affects all classes—women, men, merchants, ministers huy and sell stocks. I have the names of over a dozen clergymen who, respcctahle brokers tell me, have "a liue of stocks." I know one of the number. He is a good specimen of the power of this gambling mania. Tbe demon has got possession of him. He is as iguorant of it as the lunatic is of tbe spirit that dictates his fantastic array. He has mnde a little money. He started to make five thousaud. He has moved his figure ahead to the little sum of a quarter of a million. He is a transformed man. His face is haggard—eyes dilated—hair disheveled—he does not sleep nights—huys all the editions of the papers—rises nigbts to huy extras—chases the hoys round the corncrs for the latest news—is early at the stock market, and is amoug the last that leave the Fifth Avenue Hotel at night when the Board closes its late session. Whether a quarter of a million is worth what it costs, this gentleman can tell wben he gets it. But he is only a a specimen.

Briton's Furnace for Roasting Ores.—At the monthly meeting of the Franklin Institute, held Thursday evening, May 19, Mr. J. B. Briton's furnace for roasting orcs was exhihited. In this furnace the ors is contained in a central chamher, across whicb the products of comhustion from the fire-place are caused to pass regularly in one direction. By a discharging device, the rate of descent of the ore through the chamher can he regulated at pleasure, so that each particle of ore can he submitted to tbe action of the fire for any lengtb of time desired. By carrying the draft *across* the chamher the sulphurons and other deleterious vapors are taken direct to the cbimney, and are not brought in contact with the ore, which remains to he roasted as in ordinary kilns.

A Modern Instance.—The *United Service Magazine* remarks: "The constant reader of Shakspeare finds occasionally some capital advice which the great dramatist did not design for these times, except that he 'spoke for all time.' Tbus, when King Richard says to Stanley:

> Look to your wife; if she convey
> Letters to Richmond, you shall answer for it;

he puts a word in the mouth of authority at this day.

Heavy Transaction.—A million dollar mortgage was recorded in the office of the Recorder for this county, says the San Jose Mercury, on tbe Almadcn Quicksilver Mine, on Tuesday, June 28th, in favor of George G. Hobson nnd Wm. T. Duncan of New York, hearing interest at seven per cent. per annum. One tbousand mortgage bonds of a thousand dollars each have been issued by the company for the purpose of paying off hack debts and enlarging their sphere of operations. The company are now taking out very rich cinnabar and the quantity and quality of quicksilver produced wns never before greater or better,

California Manufactured Tobacco.—Since the farmers of San Joaquin and Calaveras counties have taken to the culture of tobacco, the manufacture of that weed into a suitable article for chewiug and smokiug has become nn important featnre in the industrial interests of Stoekton. The *Independent* snys that nn article manufactured by Hcuston and Henneford, is fast coming into notoriety in thc market, and is eagerly sought after hy smokers. Consumers who have used the article speak of it in high terms, and adds:—We helieve that thc greatest drawhack to the general use of California tobacco, beretofore, has heen owing to the inexperience and want of skill on the part of manufacturers, rather than to any inferiority of the leaf. The manufacture thus far with ns has been, in a great measure, merely an experiment hy inexperienced men: hut when men take hold of the matter who prove their capahility by producing a quality that finds its way into general use, new encouragement will he given to thc cultivator, and tbe business will receive greater atteution.

Whirlwinds.—The local of the Virginia *Enterprise* describes the collision of two whirl winds, of which he was a witness, in the summer of 1860. He says: When we first noticed them the two colnmns of dust and light matter that marked the position of the pair of whirlwinds wers ahout half n mile apart; they were about two bundred feet in hight and were moving slowly toward each other, along a ravine. As the distance hetween thc two columns decrcased, their motion toward each other hecame more rapid, and finally when they were only about one hundred yards apart they rushed together with lightning-like rapidity and disappeared, with a report that sounded like the explosion of a hlast.

The Siamese Twins.—A correspondent of the Macon *Telegraph*, who lately visited the Siamese twins, gives the following account of them:

Your readers hnve no douht seen these remaikahle individuals, but few of them perhaps have been to their houses and seen them in their domestic relations. Though united by a ligament as strong as life itself they live a mile npart, spending alternately three days nt the one and ths other house, and allowing no circumstance to defer tbeir departure from the one to the other when the regular time arrives. The one at whose house you visit them leads the conversation and acts master of ceremonies, while the other speaks only as occasion or politeness may require. One has eight aud thc other has nine children, hut one of whom is in the war, the rest heing girls and little boys. Ths twins are good neighbors, intelligent men, and thoroughly patriotic. They are, to all appearances, two separate and different men, with very little social resemhlance, and a marked contrast of character. Eng is much the most positive, self-willed and nncompromising. They are seldom hoth sick at the same time. Why should death result from a separation of persons so unlike and so little subject to he afflicted hy each other's infirmities?

Arab Horses.—The much-vexed point as to the merits of English and Arah horses has recently been tried again at Cairo. Ali-Pacha, who has the finest stud of Arabs in Egypt, maintained that no English horse could run against nn Arah four miles. His Highness Halim Pacba offered to run Companion, a well known racer bere against him for any sum he liked. The match was run from the first station on the Suez desert to Cairo. The English horse, which was bred by Lord Ribbtesdale, won in a canter hy more than balf a mile. Sucb a crushing dcfeat has taken all conrage out of the partisans of Arab horses. What astonished the natives most was, that Companion, beating his adversary by so great a distance, was perfectly fresb, and quite ready to turn aronnd and run the distance over again, while the Arah was quite exhausted and blown.

Bullion from Reese River.—A pretty steady and important stream of hullion has commenced rolling Californiaward from Reese River. The *Reveille* states that Wells, Fargo & Co. bave shipped from there during the six months ending Juue 30, $135,557 35. For the quarter ending March 31st, there was sent forward $43,550 92, and for the quarter ending June 30, $92,006 61, showing an increase of $48,455 69 over first quarter.

Prof. Silliman is now ahsent, on a tour of observation to the mines of Arizona. He will return to this city in about six weeks.

GUN COTTON VS. GUN POWDER.

Gun Cotton is just now attracting much atteution in England. Whcn this substance was introduced into the German armies some years ago it excited great interest in military circles, hut the feeling soon ahated when it hecame known that its rapid comhustion rendered it almost as dangerous to those who used it as to those against whom it was used. Some time ago, however, Gen. Leuz made improvements in the manufacture which ohviated the objections referred to, and thc British Governmeut madc an application at Vienna for the attendance of the General before a War Office committee to explain the process. Ths Austrian Government gave the required permission and there is now a manufactory of the improved gun-cotton in operation at Stowmarket. The improvement of General Leuz consists in spinning the cotton into yarn before subjecting it to the process hy which it is converted into an explosive subsiance. By this simple change the rapidity of comhustion, which constituted such a drawhack to its value when first discovered, is prevented, and gun-cotton, as now prepared, is even more manageahle than gunpowder.

Scott Russell, the huilder of ths famous Great Eastern, has recently delivered a public lecture upon its preparation and use, at which he demonstrated by experiments that it is perfectly manageable and far superior to gunpowder for practical use in war, mining, etc. The advantages of this substance as compared with gunpowder, are greater explosive force, less heat and smoke, greater facility of transport, non-linhility to deterioration from wet, and the practicahility of manufacture in water. It may, as shown by Mr. Russell, he submerged in water, aud is ready for use as soon as dry, or even while damp. If required to be transported through fire, it has only to be wetted, and hecomes harmless. The almost entire absence from smoke is a great advantage, botb for military and civil purposes. It facilitates rapid firing in case-mated forts aud hetween the decks of ships, nnd in mining and engineering works it cnahles the work to proceed more expeditiously, and with less injury to the health of the workers. The non-fouling of the guns and rifles, and the little heat generated hy firing, are other great advantages, in a military point of view, which gun-cotton possesses over gunpowder.

If thc above facts are truly stated, and there appears to be no reason to doubt them, some of our enterprising capitalists will do well to enter upon its manufacture for the supply of this State. Tbe almost entire absence of smoke, and we presume the small liheration of deleterious gases, must give it a large advantage over gunpowder for use in under ground mining, where much time is lost after every dischargs, in freeing the locality from smoke and gas.

Is the use of chloroform, in surgical operations, a modern invention? It would appear that something possessed of the same properties was used as early as the 17tb century. In Midleton's tragedy of "Woman beware Woman," puhlished in 1575, there is the following passage:

> "I'll imitate the pities of old surgeons
> To this last limb, who, ere they show their art,
> *Cast one asleep*—then cut the diseased part."

The Mines of El Dorado County.—The Placerville *News* has the following good worde for ths El Dorado county mines:

"We note the fact with plcasure that a large number of the mines in our vicinity are heing developed with an energy that is not to he found anywhere hut in our own California. One year ago there were hut two or three mills in the entire county that were nsed for ths purpose of crushing tbe gold-bearing rock which is now known to exist in immense quantities in all thc surronnding hills. To-day we can count twenty steam quartz mills in this county that are in operation or heing constructed. And in no instance, witb proper working, have they failed to reward their owners richly."

English and American Taxation.—In England, house tenants paying a rent of $100, pay a rent tax of $2 50. Male servants pay a servant tax of $5 50. Carriages with four wheels pay $17 50; horses for same $2 62. Dogs, $3 00. Ladies pay $6 per year for the privilege of powdering their hair. All persons receiving an income of $750, pay $27 tax. In tbis country the same income is taxed but $4 50. English auctiouecrs pay $50 per annum; American $20, and a much lower income tax than in England. In England pawnbrokers pay $75; here $50; peddlers $10; here $5. Race horses pay a tax of $17 in England, here, nothing. Attorneys pay a license of $45; Federal licensc, $10; and so on to the end of the chapter.

Englisb people, though taxed three times ns much as Americans, seem to prosper very well, as n general thing.—*Bee.*

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also — EDS. PRESS,

Sales of Mining Shares

For the week previous to Saturday, July 8th.

By the San Francisco Stock and Exchange Board, and Pacific Board of Brokers.

Legal Tender Notes.

San Francisco, Friday, July 8..... 46 per cent.

THE *Mining and Scientific Press* makes its appearance upon an eolarged sheet. We congratulate our cotemporary on this sign of prosperity, which we need hardly say, is well merited.—*S. F. Argus.*

Rules for Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or on any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

THE WIDE WEST.—The superintendent of the Wide West is still pushing down his incline for the tunnel. He is now down about 400 feet. He writes to the secretary in this city, that as he goes down, the vein varies in thickness aod inches. It narrowed down at one time to two inches, with hut a very slight trace of gold and silver; then widenod again to twenty-eight inches; narrowed again to one inch, and has from that time widened until it is now between four and five feet in width. Ahont thirty feet ahove the hottom of the incline, a side drift has been run on the ledge to the distance of twenty feet, from which some fifteen tons of ore or more have heen taken, the assay of which was made hy Messrs Kramp & Reese, of Aurora, and gave of gold $45,40, silver $12.25, or $47.65 per ton of 2,000 lbs. It is the intention to have work steadily prosecuted on the shaft, as the result thus far shows a steady increase in the value of the orc, and it is the hope and confident expectation that a greater depth of ore will be found, of sufficient quantity and quality to afford full and remunerative employment for the mill, and, retrieving the character of the Esmeralda mines, will repay those who shall then be found holders of the company's stock.

THE SANITARY FAIR IN SAN ANDREAS.—Nearly $1,800 net, was realized for the Sanitary Fund at the Fair at San Andreas, on the Fourth of July. The total receipts were something over $2,500, with scarce 200 white men at the fair. This is pretty good. Is not San Andreas entitled to the distinction of being set down as the hanner town of California in this good work?

THE MECHANICS' FAIR.—We again call the special attention of our Mechanies and Miners to the importance of getting ready *in time* to send in their machines and specimens. The Institute is working in earnest aod tho Pavilion is nnderway. Be in time by all means.

IS IT SO?—Photographs are nothing new, if we may believe the reports published in several of our exchange papers, which says that evidence has been brought before the Royal Society of Englaod, which proves conclusively that photographic pictures were produeed more than fifty years ago. Besides the photographs themselves, there are documents, apparently genuioe, which seem to settle the poiot.

Mechanical and Patent Department.

LABOR SAVING MACHINERY.

The demand for soldiers and the resulting scarcity of laboring men, since the inception of the present war, has created a most unusual and persistent demaud for nll sorts of labor saving machincry. Most particularly has this been observable in agricultural implements. The farmers, throughout the country, have, heretofore been the most unwilling, as a class, to admit the advantages of labor saving machinery as applied to the different departmeuts of their industry. It is said that more agricultural implements have beeu introduced during the past three years than during the previous twelve. The scarcity and high price of farm labor has had a wonderful influence in doing away with prejudice in this direction nnd in unclasping the purse strings, which had previously been so generally tight drawn against purchases of this description. Were it not for the timely appearance of the various labor helps of this character our country would at this time have beeu in a most deplorable condition, from which even the foreign laborers, now rushing in such immense numbers to our shores, would not he ahle to relieve us.

The above remarks apply with more or less force to nearly every department of industry in the land. The reaper, the mower and the horse-rake, find their counterpart in a hundred different forms in the numerous labor saving machines which have recently been applied to various purposes for the accomplishment of which human hands have hitherto been the only resource. These iron aud wooden sinews and hands are the slaves of our northern latitudes, and far more efficient and reliable than the ebony colored human chattels, for the maintenance of which the people of our southern latitudes are now waging the most monstrous and gigantic war of ancient or modern times.

Effects of Remelting and Reheating Iron.—A series of experiments, illustrating the effect of remelting, upon the strength of cast iron, was made by Major Wade, of England, some three or four years since, the result of which indicated a remarkable increase in its strength, up to a certain number of times of melting. The iron, at each successive melting, was retained in a molten state for several hours before pouring. Subsequently, Mr. Wm. Clay, of the Mersey Steel and Iron Works, instituted a similar series of experiments upon wrought iron, which was also found to increase in strength with each successive piling, heating and rolling, up to a certain number of times, after which it was found to decrease in strength in about the same proportion.

It was proved, by these experiments, that the quality of iron increased up to six times heating and melting, after which it commenced to retrogade. Similar experiments on puddled iron gave like results.

Cold Rolling.—In connection with the foregoing it will be interesting to recall some experiments by Mr. Fairbairn as to the strength of iron compressed by cold rolling. A bar fifteen feet long and two and one-eighth inches in diameter was rolled cold, down to two inches, the length being extended in the process one and a half inches. The absolute reduction of the volume or bulk of this bar was about ten per cent., and the increase of strength was fifty per cent. The test made by Messrs. Merrick & Sons, Pittsburgh, upon iron, cold rolled, gave a strength of about one hundred and ten thousand pounds per square inch for iron, which, before being thus rolled, bore about sixty-five thousand pounds. This compressed iron is being extensively used in the manufacture of car axles. Boiler iron, cold rolled, would be proportionately increased in strength.

Extension of the Steel Manufacture.—The Whipple File Manufacturing Company, at Ballard Vale, Mass., have erected during the last year, a building 200 by 77 feet, for the manufacture of their own steel, and they claim to make a better article than they have ever been able to purchase. They will soon be producing 30 tuns per week. Their files are cut by machinery.

A Heavy Forging.—The Pittsburgh *Dispatch* says that one of the most intricate pieces of forging ever attempted west of the Alleghanies has just been completed by Wm. Porter & Co., of Temperanceville. The mass is designed for the stern of the iron-clad *Umpqua*, and is to support and resist the thrust of the two propellers with which that vessel will be furnished. The bearings of the propeller shafts are eight by twelve inches, and are separated nine feet six inches by an oval rail, seven inches broad by two inches thick. They are supported from the keel plate by similar oval braces es, seven inches broad and three inches thick. the three rails forming a massive inverted triangle, some six feet from base to apex. The huge lugs by which this triangle is fastened to the frame of the vessel are four feet long, eight inches broad, and three inches thick, and one is fastened to each bearing by a short connecting rail. No mere verbal description could convey a just idea of the difficulty of forging such a mass of iron, in such a shape, and at one time it was not supposed that the work would be undertaken here. The forging will be temporarily fitted in its place this week, and will then be planed, bored for the shafts, and permanently fastened.

A Newly Invented and most effective cannon was recently tried at Fortress Monroe, when it was found to readily throw 200 balls per minute. Still more recently a letter has been published from Bermuda Hundreds, Gen. Butler's Headquarters on the Potomac, which evidently alludes to this same or a similiar gun, which appears to have had another trial, and this time in actual conflict of battle. The letter says:—

The enemy have made frequent attacks upon our entrenchments and have been defeated each time. On one of these occasions the Gatnell gun, which throws 200 shot per minute, was brought to bear upon the enemy with terrible result. Some rebel prisoners, captured at the time, asked our men: "What kind of a gun is that? Do you load it all night and fire it all day?

Iron Becoming Hot by Stretching.—In a recent discussion in England on testing chain cables, Mr. Gladstone stated that he had had much experience in the matter, and had observed that when the iron begins to stretch the temperature rises, becoming so hot before the link parts that the hand when brought in contact with it cannot bear the heat.

Nothing new in that; every person who has bent back and forth a piece of iron wire, to break it must have noticed the same phenomenon. Any force applied to iron, to change the relative position of its particles, such as drawing, compressing, twisting or changing the condition of its particles by chemical agency, will develop latent heat.

Compositions of Zinc and Copper are now made so hard that they will cut steel and stand well for tools. The ancient art of alloying and tempering these metals, seems to have been rediscovered. This art was doubtless lost soon after the discovery of steel, which is a much more suitable material for such purposes. The mixing of these hard alloys of copper and other softer metals, and their tempering, is more the result of curious than useful experimenting.

A New Steam Horse.—Among the novelties in the Mechanics' Hall at the Pittsburg Sanitary Fair, spoken of by the eastern papers, is a steam horse lately invented by a citizen of Pittsburg. This horse is represented to be capable of supplying the place of the genuine quadruped, hauling drays, wagons, etc., and will adapt itself to all variations of road surface.

The machine thus alluded to is evidently something new in the way of a traction engine, designed to work upon common roads.

Where our Ivory Comes From.—An exchange says, maliciously: "You carry a beautiful cane—it cost $3.50—$1.50 extra on account of its beautiful pure ivory head. Your wife has a costly fan, with a pure ivory handle. In your pocket is a pure ivory-handled penknife, very pretty and fine. On your table is a set of knives and forks, with pure ivory handles, and a little expense they have cost for being pure ivory. The ring in which are the reins of your costly double harness is pure ivory. The handles of beautiful parasols are pure ivory—and so on, with many articles useful and ornamental. But it happens that this "pure ivory" is manufactured from the shin bones of the dead horses of the U. S. Army."

There are 27 clerks employed in the San Francisco post office.

NEW INVENTIONS.

Ore Separator and Amalgamator.—Herman Peitsch, of New York, has just patented an ore separator and amalgamator, of which the principal feature consists in the use of a series of pans, each provided with a tootbed top and plain bottom, revolving in opposite directions, in combination with a zig-zag channel forming the communication between the succeeding pans in such a manner that the ore and water, while passing through the several pans, is thoroughly agitated and gradually freed from its heavy particles, which precipitate upon the bottoms of the different pans; the invention consists, further, in the application of two pans containing mercury and communicating with each other through a central channel in combination with suitable rotatory agitators, causing the ore to enter the mercury pans, and to be distributed and spread within the same in such a manner that all the heavy parts of the ore will be retained, and the precious metals carefully amalgamated.

Washing and Pressing Machine.—M. C. Davis and L. C. Keith, of Folsom, in this State, have received letters patent for a washing and pressing machine of their invention, which appears to be something quite new in this line. This invention consists in the arrangement of a furnace, hot-water tank and pump, in connection with a sprinkler and reciprocating pressure board operated by a hand lever, connecting with toggle arms, in such a manner that by the action of the hand lever, the pump is set in motion and a quantity of water from the tank is forced up on the sprinkler and discharged on the clothes hung under said sprinkler, and between it and the pressure-board, and at the same time a gradually increasing pressure is exerted on the clothes, thus alternately charging them with hot water and squeezing them dry until all the dirt has been removed from the same.

Improved Military Knapsack.—Mr. E. O. Woods, of Philadelphia, has introduced an important improvement in the construction of the military knapsack. The principal improvement consists in an arrangement by which the weight of the knapsack and musket are made to counterbalance each other, the whole being fairly saddled upon the shoulders. Also, by the use of this improvement the weight of the musket is almost entirely taken from the band, and the annoyance experienced from the constant slipping of the knapsack and irritation of the armpit straps are both avoided. By this advantageous distribution of burthens the soldier will feel as if half their weight had been taken away. This invention appears to be quite important and most opportune. Anything which will tend to lighten the burthens of the brave defenders of our country, should and will be received with especial favor.

Amalgamating Machine.—M. B. Dodge, of Black Hawk, Colorado, has obtained letters patent for a new amalgamator, which may be described as follows:

This invention relates to a novel arrangement of the rotary shoes of the machine, whereby the outer ones, which are subjected to the most wear, in consequence of having the greatest speed, may always be adjusted so as to run in contact with the bottom of the pan, and the wear thus be compensated for. In the ordinary amalgamating machines the outer shoes, in consequence of being subjected to more wear than the inner ones, soon become comparatively useless and thereby render the machine less efficient than it otherwise would be.

Machine for Splitting Wood.—Mr. John A. Knight, of St. Louis, Mo., has invented and obtained letters patent for a machine for splitting wood. In this device the wood is split by the fall of a weighted block, something like the operation of a pile-driver. The splitting knives are stationary. The invention relates to the construction and arrangement of the parts pertaining to the lifting and discharging of the weight. It is is said to be simple and effective, and capable of rapid operation.

Newly-Discovered Bone Cave.—The *Popular Science Review* says:—"In making certain excavations in the rock of Gibraltar, the engineers have come upon a very extensive cavern containing the bones of numerous extinct mammalia and of man. From what we have already heard, this grotto bids fair to give more light upon the question of the age of prehistoric man than any hitherto examined. As yet we have had no minute description of the fossils discovered in this locality, but we have been informed that a very great number of specimens have been forwarded to this country by one of the Gibraltar authorities particularly interested in the geology of the excavation."

How Granite Was Formed.—In delivering one of the lectures of the Swiney course at the Royal School of Mines, Dr. Percy objected to the assertion of geologists, that granitic rocks must have been formed by plutonic agencies, for, said he, there are certain difficulties which have always been in the way of accepting this view of the subject—difficulties known at all events to those who have been accustomed to make experiments on the fusion of mineral substances at high temperatures. This is especially seen by examining the condition of quartz in granite; it is always found in the crystalline condition, and has invariably a specific gravity of 2.6. There is not a single instance known to the contrary. Hence there is reason to believe that the quartz could never have been fused, for the moment silica is fused, no matter in what condition it was previously, a peculiar glass-like collodial mass is produced, having a specific gravity which never exceeds 2.3.—Therefore there is good reason to conclude that granite could never have been found under the condition of a high temperature.

Elevation of the Coast of Chili.—That the latter coast is being gradually elevated, would appear from the fact that for half a century the harbors of the country have been diminishing in depth. This change, however, might be accounted for by supposing the existence of currents bringing in *debris*. M. Pississ in the *Comtes Rendus*, gives other proofs. On examining the coast between Conception and Rio Maule, the various escarpements of schistose rocks will be found to present several cavities formed in other times by stone-boring mollusks; these markings succeed each other without interruption from high water level to a hight of from 8 to 10 metres (about 30 feet). The upper ones are much more crowded than those below, thus proving that the elevation has been gradual; for had it taken place at various intervals, there would he a series of interruptions in the series, which do not exist.

Corns.—It is a mistaken idea that corns are deep-rooted—they have no under-spreading roots at all. The center of the corn is a little bundle of straight pipes, and corns are extirpated by removing the cause of them upon the tops of these pipes. The corn-cutters with a sharp penknife remove the upper part of the bundle of pipes, and the pressure on the top being removed from time to time, the bottom of the pipes ceases to grow. Dr. Wilson tells us that next to paring down the callous part of a corn and digging out a portion of the central part, the best application is a piece of buff leather, with a hole in the center exactly the size of the center of the corn. A little adhesive plaster spread over the leather will fix it on. The yeast of beer spread over linen and applied daily to a corn has sometimes removed it. Corns are the result of pressure or friction, and upon removing the cause the effect will often wear away.

Chemistry of the Oil of Nutmeg.—The nutmeg owes its peculiar aromatic properties and flavor to a volatile oil which is present in large quantities, but up to this it has not been submitted to a chemical examination. This oil may be extracted by boiling the kernel in an ordinary retort, but in this process only a portion of the essence is obtained. A preferable method appears to be the treatment of the finely powdered nutmeg with bisulphide of carbon or sulphuric acid. The mixture is then filtered, and a stream of vapor is caused to play upon the residue, which then loses all the essence it contained. The composition of the essence obtained in this manner is the same as that of volatile oil of turpentine.

Growth of Egypt.—Correspondents writing from Egypt say that that country is becoming revolutionized. Every steamer adds to the population and the developing energy that are to urge forward the country in the paths of civilization and wealth. Alexandria and Cairo already have more inhabitants than can find house room, and the inland villages are also overrun with inhabitants. Large factories and manufactories are abundant and the whole country is getting to be fashioned after America and England.

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

WASHOE.

The Justice Company continues to take out twenty-five or thirty tons of pay rock per day from its old shaft, and keeps sinking its new one deeper, it now being down 130 feet, and rapidly progressing, working day and night upon it. It is now being carried down in a very hard formation, and cannot therefore be sunk as rapidly as heretofore.

Knickerbocker Co.—This company continues work in both its upper and and lower shaft. The upper or old shaft is now 290 feet deep, and is much the deepest of any on the flat. It is being sunk deeper all the time, but the work on it is slow on account of the hardness of the rock. The company is running a drift from the lower shaft along on the water level, prospecting the ledge in this portion of its claim. The hoisting here is done by means of a whim as it is at the old shaft. The company has taken out some very good looking quartz this spring, but it is not now working in its ledge. It is considered to be one of the best claims on the flat, and at present it is having more work done on it than any of the companies whose claims are down that way, are doing on theirs.

A New Mill, for custom work, to be called the Summit Mill, is being erected by Messrs. Carville, Gashwiler and Mason, on the site of the old Gould & Curvillo Mill, (near the Ophir mine) which was burned down some time ago. The new mill will have twenty stamps; the foundation, of stone, is almost completed. The body of the building will be of wood, but will be much more substantial, and the whole mill building and machinery will be greatly superior to the old one. The proprietors expect to have this mill running within two months.

The Crown Point Company struck its ledge on the 29th ult., and since then has been taking out quartz for crushing. It has taken out two or three tons of white and blue silver-bearing rock, which is so common in Gold Hill proper, and which generally yields so well. The company has not taken out any pay rock before for about a year, and during that time the mill has been doing custom work. But its last custom work has probably been done, and the company will henceforth have all the rock of its own to crush, which its mill can work. The *Union* of July 2d, published three days after the strike, says:—"We were shown last evening, by Mr. Woodcock, Superintendent of the Crown Point mill and mine, a piece of ore that 'bangs' anything that we have seen in the country. It has been burned with borax, and was completely covered with globules of silver. The impression is that the Crown Point has now got as good a thing as 'any other man.'"

Crystal Peak is situated on the Truckee river, (Heaness Pass route,) about 30 miles distant from Virginia. There are now from forty to fifty houses in the town. Here are the coal fields of Nevada, which, if they prove as good as present appearances warrant, are to form no inconsiderable item in the wealth of the Territory. The Nevada company have developed a coal mine four feet in thickness, after running a tunnel in the hill forty feet. The Mudsill company have their tunnel in 220 feet, and are sinking a shaft. The vein of coal pitches about one foot to ten. Mr. Buel exhibits a specimen of coal from these mines, which very much resembles the anthracite. He says that on the 1st of March the coal in the dump-pile was set on fire, as an experiment, and that it is burning at the present day. They are also prospecting for the precious metals—the indications of silver being very encouraging. A company called the Truckee Ophir are at work for this purpose.

More Machinery.—The Belcher company has ordered a large new engine and boiler, which is to be put up at its shaft where the hoisting works were recently erected, and will be used to drive the pump. The engine which is now used is of 35-horse power, and at the present time performs both the hoisting and pumping. The Uncle Sam company has decided on procuring another engine, to use in connection with the one which is now working.

REESE RIVER.

The Nye County *News*, in speaking of the claims about Ione City, in Nye county, says: "Of the claims here most entitled to special notice, the Pleiades stands first; both, because of the size, regularity, and other external features of the ledge, the extent to which it has been opened and the large amount of rich ore it contains. The claim consisting of but eight hundred feet, was located by Messrs. Newman, Carpenter, Dudley, Smith and Bourn, who still own most of it. The ledge, as do most of those in the district, runs in a northerly and southerly direction. It is three and a half feet wide on top, and fully four feet at the bottom of the shaft now down ninety feet. It pitches at an angle of about sixty degrees, is as uniform in shape as a piece of masonry and bears all the features of a regular fissure vein. The company have now got out about sixty tons of first class ore, which will go from $250 to $300 to the ton, working process, and forty tons of second class that will yield about $125 to the ton. Some of this ore has worked up to $800 in the mills, while the assays have ranged from four hundred dollars to ten thousand. From the lowest point reached, the black, fine grained sulphurets, mixed with the chlorides of silver, are now being taken out in masses that prove this to be not only a rich but permanent mine. We know nothing about the prices this ground is held or sold at, or whether it is in the market, but should suppose if bought at $300 a foot there would still be a fine margin for profit. It is being diligently worked and will probably soon reach water level, when the quality of the ore will, no doubt, still further improve."

Bowery Tunnel, San Francisco Canon.—As water is reached in different places, whether in this or the adjoining districts, the same class of ore is found. In the Bowery claim in San Francisco Cañon a tunnel was run to the depth of twenty-five feet when the ledge was struck, from which point an incline was sunk to water level, obtaining a first class ore with ruby and native silver. The ledge is about fifteen inches wide.

Ozark.—The progress of development in the Ozark is rapidly going forward. The incline is now down 100 feet; there are several small veins in sight showing good ore, but not in paying quantities. There are 600 feet in the location, and as it is in the favorite locality of Upper Austin, great confidence is felt in its ultimate value by its owners.

Morgan and Muncey.—This claim is now raising large quantities of first and second class ore, keeping both the Union and Pioneer Mills engaged in crushing. The Union is crushing the first class and the Pioneer the second class ore.

Ruby.—An incline has been sunk on the Ruby lode in San Francisco Cañon, to the depth of one hundred feet, finding some very fine ore through a small ledge.

Bullion.—The total amount of bullion sent forward by Messrs. Wells, Fargo & Co., from Austin, during the month of June, was $40,776. The cause of such small shipment according to the *Reveille*, is that the mills have not been running, on account of building roasting furnaces; but in a few weeks they will all be at work, when they will send forward the whole amount weekly.

Another Stack.—The Oregon Mill Company, according to the *Reveille*, are now erecting a splendid brick chimney for their new roasting furnaces. It will be fifty feet high and quite ornamental to that portion of the city. They are also putting up quite a number of other substantial and useful improvements to their mill.

ESMERALDA.

The Esmeralda *Union* says that preparations are being made on a grand scale for working the Juniata and Magna Charta claims. As many men as can work in these mines advantageously are already employed, and a large number will be put to work as soon as the claims have been thoroughly opened. The company have already commenced sending rock to one of the mills for crushing and it is thought that as soon as these claims are well opened the parties owning them will be able to keep one or two good mills running constantly on their ore.

The Wide West company are laying in an immense quantity of wood and are making preparations for keeping their mill in operation during the summer.

The Empire.—A gentleman who works in this mine on Last Chance Hill, informs the *Union* that the ore coming out of the claim is very rich. The company have about fifty tons of rich rock out now which they have commenced hauling to a mill for crushing. It is expected to yield very largely.

Going to Work.—The Mutual Consolidated Gold and Silver Mining Company have levied an assessment and intend to resume operations in a short time. The Mutual is one of the finest looking ledges on Middle Hill, being large and well defined, and it contains some fine ore.

A Valuable Hint—Perhaps.—It is asserted that Irish moss or the silicate, arseniate of soda will prevent the incrustations on steam boilers. Six to eight pounds per week is sufficient for a forty or fifty horse power boiler.

OWENS RIVER.

The Owens River *Herald* in speaking of the mines of that region says:—The Eclipse is beyond all question one of the largest and richest leads in the country. The company is about breaking ground for the erection of a forty stamp mill. The "Ida" is thought by most persons who have inspected it equal to the best. The "Coso" lodes are immense we are informed—for we have not made a personal inspection of them—our informant believes that the working results will astonish the world. The "Blue Dragon" has excellent prospects. "Great Western," Keyes District, we have glowing accounts from this company. "Good Return" will be no misnomer in less than one year if present indications are half realized.

HUMBOLDT.

The *Register* says that the mining prospects of Humboldt never looked better than at the present time, and thinks there is not a community on the Coast where so large a portion of its numbers are actually employed. The miners are gradually working down 10, 15 or 20 feet deeper each week into the mountain's depth. A good many companies could already, by a slight change of work, go up in their shafts and tunnels and breast out large quantities of ore for milling; but as it happens most of these are remote from any mill, and they prefer to go deeper while more mills come in, and have their mine in shape for working a large force of men when the facilities for turning their raw metal into bars are better.

Manitowoc Bullion.—A small lot of second class ore, experimented upon, a few days since, turned out a bar of 94 ounces.

The Humboldt Salt Mine, says the *Register*, is showing signs of having emerged from the miserable condition in which bad management has kept it so long. Large quantities are now shipping, to Virginia, Reese River, and other points. One day last week 13 teams were loaded.

ARIZONA.

A correspondent of the Los Angeles *News* writes that everything is progressing favorably in that section of the Territory. The miners are busily engaged in prospecting and opening up their lodes, and taking out fine looking ore. Provisions were at times very scarce, but the means of transportation were improving. The miners were cheerful and satisfied, being well assured that their lodes were rich and bound to remunerate them for all their hardships. The date of the letter is May 14th, and the writer says that in a few days several tons of rich ore from the Hassayampa District, would be started *en route* for San Francisco, the astonishing richness of which would open the eyes of capitalists to their true interest, and cause them to hasten the development of the rich mineral resources of the Territory. The writer and several others are engaged in getting out two tons of ore for transportation to New York, to test its richness. A gentleman, trading between the district and Santa Fe, has proposed to take the ore overland to a shipping point, and from thence to New York, free of charge. Considerable confidence is felt that the result will prove highly gratifying to those who venture the experiment, and demonstrate unmistakably to the world the vast richness of Arizona.

Ore from the "Cosette."—Several hundred pounds of rich silver ore from the Cosette mine, La Paz District, Arizona, says the *News*, recently arrived at Los Angeles, for shipment to San Francisco. It is said to be very rich, lode well defined and extensive.

Renewed confidence is springing up in behalf of the Colorado; something new has "turned up" in the vicinity of Williams' Fork—claimants of mining ground, we notice, are looking closely to their interests in the last named locality.

HOLCOMB VALLEY.

This valley is located 50 or 60 miles a little north of east from San Bernardino. Late intelligence from there states that a large amount of work is now in progress; a number of lodes are being opened. The "Green" lode has proved rich beyond expectation. Work had been commenced by the Morongo company with the most flattering prospects, with a good force of experienced men, which would be increased as fast as room could be made by progress. The editor of the Los Angeles *Star* has seen some ore from this mine which comports well, in appearance, with ore from the "Argentine" of Santa Catalina, which assays some six hundred dollars to the ton. The work of taking out ore, construction of furnaces, putting the Morongo mill in order, etc., is progressing well; a report from the mine above named, in the form of bullion, may be looked for at any time after sixty days.

A lot of new and additional machinery was being received by Marshal, Walsh & Co., which they would erect immediately. Several new and rich discoveries are reported; among which is a mine of cobalt, and a vein of quicksilver.

SANTA CATALINA.

Reports from the mines in this Island are still highly favorable. The discoveries of silver, lead and copper are spoken of in the most enthusiastic manner, and it is stated that richer mines have been brought to light here than any man can form any idea of without personal inspection. Large quantities of ore have been sent to this city, and should the expectations formed regarding it be realized, machinery will soon be taken down to the island. A mill on the island would be a most important agent in developing the resources of the locality. Such a means of testing the ore is greatly desired by the miners, and would doubtless be a profitable investment of capital.

A Cricket War.—Some few weeks since, there was a sudden appearance of immense numbers of crickets on the south side of Spanish Fork, near Salt Lake. They appeared in such numbers that there was imminent danger of a total destruction of the entire crop from their fearful visitation. In this emergency the people turned out *en masse*—men women and children—and with bunches of willows drove the main body of the crickets up Water cañon, down which they did not afterwards venture. A detachment of the crickets at the same time crossed the river, preyed several days upon the willows and bottom grass, and had consumed two fields of wheat, when the people, to the number of six hundred persons, went to work herding and driving the insects until they corraled them upon layers of straw, where they burned them by the million. The operation of driving and burning occupied nearly three days and nights, and twelve loads of straw were consumed and an innumerable host of the enemy were destroyed. This lesson is too good to be forgotten, should they appear elsewhere.

It may not be without importance in California, where our ranchmen are frequently invaded in precisely the same manner by grasshoppers and locusts, which make their way from place to place, mostly upon the ground, destroying everything green within their reach—fruit trees not even escaping.

Gold Hill Mines.—The Eclipse Company are giving their works a thorough overhauling. They are putting in two new and powerful engines. If possible, they will have all ready for a new start shortly after the Fourth.—The Empire Company are taking out a large amount of rich ore. They are finding a considerable amount of water, but are able to keep their works drained by means of a hoisting tub. Both of their mills are in operation.—The Imperial Company have lately found it necessary to make some slight repairs in their machinery, though of no great importance.—Some very rich silver ore has just been found in the Crown Point. When treated with borax in a common forge, globules of silver are drawn out and completely cover the ore.—The Crown Point Ravine Company have a fine well timbered shaft down some forty feet or more.—The Belcher Company have ordered a new 30 horse-power engine, which will be used for driving a pump—they have a 35-horse power engine, which now does both the pumping and hoisting.—The New Oregon Company have the framework of their new hoisting works about completed. They will soon have their machinery in operation.—The Knickerbocker Company, American Flat, are sinking upon two shafts; the deepest of these is now down 290 feet.—The Uncle Sam contemplate the purchase of another engine, the one at present in use being insufficient to do all the work required to be done.

Cheap and Novel Cooking Arrangements.—The residents in the neighborhood of the hot springs of Smoky Valley, according to the Reese River *Reveille*, have a cheap and convenient way of doing their cooking. The water coming up out of the great depths of the spring seems to be much hotter than water boiling in the open air. Those residing in the neighborhood habitually use it for cooking everything that is done by boiling. Coffee and tea are almost instantly made by using the water direct, while meat, and that miners luxury, beans, suspended in a kettle or sack are cooked with dispatch and no danger of scorching. Lately the experiment of baking was tried, the modus operandi being to suspend the bake kettle or oven in the water, with the dough in the oven well covered, and leaving it for a few hours when it was found baked in the very neatest manner, not having the dry hard crust as when baked by a fire. There are no need of fires at the springs, as all cooking and warming is done by the natural heat. This great curiosity is about fifty miles south of Austin, and will some day become a place of much resort.

Persons living in cities begin to wear glasses earlier than country people, from the want of opportunities of looking at things at a distance. Those who wish to put off the evil day of *spectacles*, should accustom themselves to long views. The eye is always relieved, and sees better, if after reading awhile, we direct the sight to some far distant object, even for a minute. Great travellers and hunters are seldom near sighted. Humboldt at eighty-seven could read unaided. Sailors discern objects at a great distance with considerable distinctness when a common eye sees nothing at all.

San Francisco:

Saturday Morning, July 9, 1864.

THE GOLDEN AGE AND EMPIRE have received another remittance of $4,294 from their mines —the returns from a lot of second class ore.

AN EQUESTRIAN STATUE of Washington is to be erected in the Public Garden at the foot of Boston Common. It will cost $20,000, which will be raised by subscription.

HON JOHN CONNESS will please accept thanks for a large number of valuable public documents received per Golden Age. Mr. Conness has telegraphed to his friends in this city that he will leave New York on the 13th inst., *en route* for California.

THE OWEN'S RIVER HERALD is the name of a semi-monthly recently started at Bend City, Coso county, California, (the Owen's River region). It is published by L. W. Ransom & Co., proprietors of the Visalia *Delta*.

THE WASHOE HERALD is the name of a new evening daily paper which has reached us from Silverland. It is published by Messrs. Fitch & Bennett, in Virginia City, and is a large and well filled sheet. Its editorial department exhibits both industry and ability, and will ever be a welcome visitor to our table.

VILLAINOUS.—W. E. Robinson, broker, of the firm of W. E. Robinson & Co., 536 Washington street, absconded on the last steamer for the east, robbing his partner of all his funds, and falsely obtaining money from outside parties to the amount of several thousand dollars. His partner, J. R. Megarrigle, we have known as a practical and intelligent miner in Plumas county, whose honesty is without taint.

MEXICAN MINING LAWS.—We have received from Ralph Emerson, Esq., a copy of the "Mining Laws of Mexico and Spain, and Statues of California, relative to Joint Stock Companies." This useful little work has been carefully compiled and translated by Mr. Emerson, an eminent professor of languages, in this city. The work is published by A. Gensoul, 511 Montgomery street.

AN IRON FLAG.—Messrs. Coffey & Risdon, boiler makers, on Market street, have placed over their works an immense iron flag, which will be kept "floating" to the breeze day and night, in storm and calm, the full year round. This flag is made of light boiler iron, and gives a fair representation of our national ensign, with its legitimate number of stripes and stars. It is placed upon an iron staff, which turns on a pivot, the flag acting as a vane. May it ever wave.

STATE GUARD CADETS.—The officers and members of the State Guards, a military organization in this city, have taken steps to form a company of Cadets, to consist of boys from 14 to 18 years of age, who are to be called the "State Guard Cadets." A circular setting forth the plan and object of the movement has been circulated, in which it is set forth that "the military drill for boys is fully equal to any gymnastic exercise as a means of physical culture, and is more conducive to a taste for and knowledge of practical military duties in after life. The drill has indeed been adopted in some of the public schools of the East in preference to gymnastics, and is found to produce erect, graceful bearing, and habits of prompt obedience. The State Guard prohibit the use of intoxicating liquors and vulgar and profane language by their own members, and would require compliance to this rule from the Cadets." The project should be received with favor.

MINING SHARE MARKET.

The Mining Share Market has been less active the past, than the previous week. With but two or three exceptions, every stock which has found a buyer during the week, has done so at a decline from previous quotations. No relief to the depressed condition of the market is yet apparent. We append our usual remarks.

Gould & Curry has been less active than last week, closing on Saturday last at $1,635, it advanced to $1,850 on Wednesday, since which time it has gradually dropped to $1,600, closing at last evening's board—and $20 below that of one week since. One hundred and thirty-nine feet have changed hands. A dividend of $50 per foot was declared on Saturday last, leaving a large balance to be carried forward.

Ophir has met with a small but uniform sale at $730 per foot, at which figure seven feet have changed hands. This stock still appears to be firmly held.

Challar has been more quiet. Selling on Saturday last at $400, it advanced to $415 on Wednesday, and still further to $425 at yesterday's board.

Savage has met with three purchasers during the week, each at $1,150—five feet sold.

Potosi has still farther declined, closing at $900. Ten shares sold on Wednesday at $1,000, eight on Thursday at $925 and 59 yesterday at $900@950, closing at the former figure.

North Potosi still continues quite active, but at declining rates; 260 shares have changed hands at from $47½@55, closing at $50.

North American has been less active than last week, but is still sold at fluctuating rates; opening on Saturday at $62½, it reached $75 on Wednesday, but dropped to $60 at its closing sales yesterday.

Imperial has met with but a single transaction, of 10 shares, at $148, seller 30 days, a slight decline from the closing figure of last week. This stock is firmly held.

Belcher, a company seldom heard from of late, has found a single buyer the past week at $1,050. When last heard from it was quoted $900.

Yellow Jacket has met with a considerable advance from last week's quotations. We notice but two transactions, each at $800.

Golden Age & Empire has receded to $17, with but little business however.

Burning Moscow has still further receded. It maintained a uniform price of $20 till yesterday, when a seller was found at $19.

Bullion. G. H., has declined from $65 to $50, with an increase of business; 121 shares have changed hands.

Melones has improved from its last week's figure of $12 to 20, at which rate we notice a single transaction, on Tuesday.

Lady Bryan has suddenly dropped from $24 to $10½, at which figure it closed, yesterday. Closing with our last report at $24, it sold for $20 on Tuesday, since which time it has gradually declined to the above mentioned closing figures; 1,147 shares have changed hands during the week.

Baltimore American, which was not heard from last week, has met with a light business at from $45 to $47½. Two weeks since it was quoted at from $40 to 50. Under the circumstances this stock may be considered as pretty firmly held.

Nevada, J. G., has dropped from $50 to $24. This stock has met with but a slight business for several weeks past. But ten shares have changed hands the past week, at from $24@25.

Empire Mill & Mining Co. met with a small business three weeks ago at $800; last week it was quiet; we notice two transactions, of one share each, this week at $700.

Wide West still continues at last week's figures, $10@$11. The recent reports of an improvement in the deep incline of this vein, are fully substantiated by a published letter from the secretary.

De Soto, Humboldt, has been heard from the past week at $12½.

THE BLUE LEDGE—EL DORADO.—It will be remembered that the company owning this ledge, started up their new mill a few weeks since, with a result quite different from what had been anticipated. A subsequent investigation satisfied the company that the entire operations of both the mine and the mill had been badly managed. About 200 tons of rock had been put through the mill, which consists of twenty stamps, twelve pans and six separators. Some thirty flasks of quicksilver were employed in charging the pans, about *two-thirds of which was lost*. The loss was attributed to the imperfect construction and management of the separators, which were got up by the superintendent himself. After a brief enquiry into the matter, a change in the management of the mine was promptly effected. The new superintendent, Mr. Wm. S. Moses, is now on the ground. A set of Varney's separators has been ordered, and as soon as they are put up the mill will be again started. The superintendent writes hopefully of the next attempt to start the mill. The extraordinary loss of quicksilver fully accounts for the failure of the rock to come up to the expected standard. The confidence of those best acquainted with the mine has not been shaken by this preliminary failure. An assessment of $1.50 per share has been levied upon the capital stock of the company to pay off the indebtedness and make the contemplated changes in the mill. The new separators have already gone up, and the superintendent hopes to be able to start about the middle of next week. It is known that good ore has been struck in one or more of the shafts, but owing to the unskillful manner in which the work has been done upon the mine, the company are as yet quite uncertain as to the nature and extent of their vein or, indeed, whether they have any well defined vein at all. Important developments, however, are confidently expected in shaft No. 5, which is now down about 60 feet, near which point they have struck good ore.

QUITE A NOVELTY, in the way of procuring aid for the Sanitary Fund, was brought out at the San Andreas Fair, on the Fourth of July. A human figure, of a somewhat grotesque construction and dress, was devised by an ingenious artist, of that place, which stood with outstretched palm in begging attitude, and with mute eloquence solicited contributions from the passers by. No sooner was a piece of coin placed in the hand of the figure, than its mouth opened, the head dropped back a trifle, the hand came up and the coin was suddenly transported to the mouth. The novelty of the thing attracted much attention, and brought out many a dollar from the curious observers which would otherwise have been held back. The capacious stomach of this new Sanitary agent was pretty well filled during the day. An interesting young lady stood continually by the side of the image, and gently touched a secret spring as coin after coin was placed in the open palm, by which the same were promptly deposited beneath the vestments of the grotesque figure. Even the primitive Diggers, a large delegation of whom were present, could not resist the temptation to deposit their long and short bits, to see how promptly and comically they were spirited away. We understand that the image will be placed in the forthcoming Industrial Exhibition in this city, to repeat its benevolent efforts in behalf of the good work for which it was designed by its ingenious inventor.

NEW QUARTZ MILL.—Parties from Sacramento, says the Alpine *Chronicle*, have recently passed through our mining district for the purpose of examining our mines and satisfying themselves as to the wealth of our country. They are so well pleased with our prospects that a contract has been entered into with parties at Silver King for the erection of a building for a steam quartz mill, at that place.

"PUNDIT" in reply to "F. A. H." on his theory of the mines of the Sierra Nevada, has been received and will appear next week.

REGULAR mail communication is now established between Idaho City and Salt Lake.

BRIEF MENTION.

SAN FRANCISCO.

THE steamer Golden City sailed on Monday, carrying $1,195,000 treasure and a large number of passengers.

THE EVER GLORIOUS FOURTH was celebrated with immense enthusiasm, in this city. The procession, decorations, and fireworks, were all worthy of the place and the occasion. Thousands of visitors from every part of the State, thronged the streets. No accidents occurred to mar the general enjoyment of the day.

THE JOSEPHINE QUICKSILVER MINING CO. have filed notice of intention to remove their place of business from San Louis Obispo to San Francisco.

E. L. BRITTINGHAM and OSCAR L. BOYN, both well known citizens, died suddenly, on Wednesday.

DR. H. B. HOSMER was knocked down and robbed, on Post street, on Tuesday evening. The robbers, among other *booty*, took even the Doctor's boots. These must be the same insane thieves who broke into the rooms of a jour. printer, on the same night, in the vain hope of finding something valuable.

A LITTLE GIRL, named Hattie Owens, was run over by a baker's wagon, on Wednesday morning, and instantly killed. The funeral of the poor little child was very largely attended.

A DRUNKEN SOLDIER, named John Barrett, killed John McGowen, in a saloon, on the corner of Clay and Kearny streets, one night this week.

THE "Captain Henry M. Ingraham," who, assuming to be a Confederate officer, headed the gang who robbed Wells, Fargo & Co.'s treasure wagon, turns out to be John Poole, late Sheriff of Monterey county. He has been arrested by the military authorities and will doubtless meet his deserts. Poole was also one of the Chapman pirates.

AN ATTEMPT was made on Thursday morning last to blow up the safe of Mr. E. H. Shaw, Secretary of the Harmon and Armagoza Mining Companies. The safe was blown to pieces, but the robbers got nothing for their pains.

LEARNING is like mercury, one of the most powerful and excellent things in the world in skillful hands; in unskillful, the most mischievous.

AN acre of ground sown with hanannas, it is said, will support more than fifty persons; the same amount of land sown with wheat, in Europe, will only support two persons.

SIMPSON & PIERCE, near Smartsville, Yuba county, have cleaned up from their claims on the Blue Gravel lead, since the 15th of March, about $70,000.

NEW YORK is filled with small pox. Its form is virulent; that of the genuine confluent disease. In some cases, bodies have been buried in wrappers, having lost nearly all shape and cohesion.

NEW and rich quartz fields have been discovered somewhere between the Middle and South Boise Rivers.

NEW YORK expects to receive a quarter of a million of emigrants the present year. Boston will receive half as many more.

FOURTH JULY ACCIDENT.—At Folsom, on the 4th, a man whose name is not given, while firing a salute, lost an arm by the premature discharge of a cannon.

More than two hundred millions of dollars have been contributed to philanthropic objects in this country since the war began.

A VEIN OF GOLD has been discovered at some depth in a garden at Worthing, Sussex, England. Both gold dust and gold bearing quartz were found.

WHEN prosperity was well mounted, she let go the bridle and soon came tumbling out of the saddle.

THREE of the largest brains in modern times were those of Drs. Chalmers and Abercrombie, and Mr. Thackeray; all of whom died suddenly and alone in bed.

MORNING AIR.—It is a common and favorite notion with many people that the morning air is the purest, most bracing; but the very opposite is the fact. The air is more full of dampness, fog, miasma, about sunrise, which the sun, however, soon dissipates. Before engaging in anything like exercise or work in early morning out of doors, it is conducive to health to take a warm cup of coffee, if breakfast is not to be had.

THE OPEN SESAME MINING CO.—The mines of this company are located on the flanks of Mount Diablo, and consist of thirteen locations, on as many different lodes. The principal part of the work thus far done, has been confined to three locations—the San Pedro la Verdad, the White Diamond and the La Feliz. Upon the former, two tunnels have been sunk, developing good ore, most admirably located for taking out rock. Upon the La Feliz, located about 300 feet distant from the first mentioned, work is now being actively pressed, and a considerable quantity of ore is already upon the dump. A lot of 92¼ lbs of this ore, was taken, unassorted, and worked in Farrand's amalgamator, on Commercial street, in this city, and yielded, according to report, at the rate of $156 to the ton. A tunnel has been commenced at the White Diamond, developing a promising ledge, but from which only a small quantity of rock has yet been taken.

The ledges belonging to this company have recently been examined by L. K. Lamson, as an expert, from whose report we condense. Mr Lamson expresses the opinion that a thirty stamp mill can be kept busy upon rock, which can be taken from these mines, and that the rock is of a good paying character. The company has levied an assessment of $1 for every share of ten feet, the proceeds of which are to be applied to the construction of a mill near the mines of the company.

SCIENTIFIC EXPEDITION TO EASTERN ASIA.—For some time previous to the adjournment of Congress, a project for a scientific expedition to Eastern Asia, to be conducted by a competent commission, was before that body. The project was supported by such respectable influences as the New York State Agricultural Society, and the American Institute. It appears to have been publicly suggested by Dr. J. Maegowan, who has resided in that part of the world some years.

We have no doubt that a really practical commission might be of great benefit to the country explored, and the commercial world generally. It will be of most especial advantage to California, in the way of still further increasing the already important trade between this coast and that important portion of the globe. California would hail such an expedition with especial favor; but we presume that Congress, which has now adjourned, refused to employ the people's money for any such outside purpose in our present emergency. Government needs all the money it can command for its present exigency. When the war is over, such a project will doubtless be received with much favor both by Congress and the people.

INCREASE OF GAME.—It is said that in consequence of the departure for the war of such a large proportion of men who are accustomed to the use of the rifle that game of all descriptions has multiplied wonderfully within the past three years in the New England States. Many trout brooks in Massachusetts which were supposed to be barren of this luscious fish, are now filled with them. Deer have been left unmolested so long that in Western New York they approach very near the habitations.

OWENS RIVER MILLS.—There are now six mills in the Owens River Region, viz: In Coso District, two, one belonging to the Josephine, and one to the Willow Springs Companies; in Russ District, the Union and Ida Mills; one at San Carlos, Inyo District; and the Coso Mills, in Blanche District. There was one, also, in the White Mountain District, but it has been pretty much destroyed by the Indians.

HALF of the Vermont state agricultural college scrip is now sold, and the funds realized are invested in Vermont State bonds worth $130,000. This makes the endowments of the college unexpectedly large.—*Ex.*

When will California begin to reap the advantages to be derived from the government appropriation set apart for her benefit?

A miner by the name of Joseph McCoy was instantly killed at a coal mine near Crystal Peak, a few days since, by being precipitated to the bottom of a shaft forty feet deep.

New this Week.

Point Arena Petroleum Mining Company.

The Stockholders of the Point Arena Petroleum Mining Company are hereby notified that, by order of the Board of Trustees, there will be a meeting of the Company held at the Secretary's office, Room 28 Government House, corner Sansome and Washington streets, San Francisco, on the ninth day of August, 1864, at 7½ o'clock, P. M. A full representation of stock is requested, as important business is to be transacted. Attest, D. S. CUTTER, Secretary.

San Francisco, Cal., July 7th, 1864. 2-5t

Enterprise Copper Mining Company, Empire

Ledge, Garden Bar District, Placer County.

Notice is hereby given, that the office or principal place of business of the above Company will be removed on the 15th day of August next, to Lincoln, Placer County.

M. O. ELMORE, Secretary.

San Francisco, July 9th 1864. Office 645 Clay street. 2-4t

Eureka Mill and Mining Company, Big Creek

District, Lander County, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 8th day of July, 1864, an Assessment of Three Dollars and Fifteen Cents per share was levied upon the capital stock of said Company, payable immediately, in United States Gold Coin, to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Monday, the 8th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 19th day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the Sale. By order of the Board of Trustees. N. DUPERU, Secretary.

Office, No. 208, California Street, San Francisco.

The advertisement of stock delinquent, on the above assessment, is postponed until August 13th, 1864, and the sale thereof is postponed until August 27th, 1864. By order of the Board of Trustees. (2-5t) N. DUPERU, Secretary.

Clinton Gold and Silver Mining Company,

Reese River District, Lander County, Nevada Territory.

Notice is hereby given, that at a Meeting of the Board of Trustees of said Company, held on the 2d day of July, 1864, an Assessment of 50 cents per share was levied upon the capital stock of said Company, payable on the 2d day of July, 1864, in United States Gold Coin, to the Secretary, at the office of the company, No. 25 Montgomery Block, San Francisco.

Any Stock upon which said Assessment shall remain unpaid on Saturday, the 6th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 26th day of August, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

F. G. APPLETON, Secretary.

Office, No. 25 Montgomery Block, San Francisco. 2-4t

Daniel Webster Gold and Silver Mining Com-

pany, Sacramento District, Humboldt County, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 5th day of July, 1864 an assessment of twenty cent per share was levied upon the capital stock of said company, payable on the 6th day of July, 1864, in United States Gold Coin, to the Secretary, at his office.

Any stock upon which said assessment shall remain unpaid on the 8th day of August, 1864, will be advertised on the 13th as delinquent, and unless payment shall be made before, will be sold on the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees

JOHN J. SCOTCHLER, Secretary

Office, 204 Front Street, San Francisco, Cal.

July 6, 1864. 2-4t

Dane Gold and Silver Mining Company, Es-

meralda.

Notice is hereby given, that at a meeting of the Board of Trustees of the Dane Gold and Silver Mining Company, held on the 5th day of July, 1864, an Assessment of one dollar per share was levied upon the Capital Stock of said Company, payable immediately, in United States Gold Coin, to the Secretary.

Any Stock upon which said assessment shall remain unpaid on the 8th day of August next, will be advertised on that day as delinquent, and unless payment be made before, will be sold on Saturday, August 20th, 1864, at 12 M., at the office of the company, to pay assessment, advertising, and expense of sale. By order of the Trustees.

EDWARD CONNER, Secretary.

Office, 607 Washington Street, July 9. 2-4t

Enterprise Copper Mining Company, Empire

Ledge, Garden Bar District, Placer County, California.

NOTICE.—There are delinquent, upon the following described Stock, on account of assessments levied on the 20th day of September, 1863, and the 12th day of March, 1864, the several amounts set opposite the names of the respective shareholders as follows, to wit:

ASSESSMENT LEVIED SEPTEMBER 20TH, 1863.

And in accordance with law, and an order of the Board of Trustees, made on the 10th day of June, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Jerome Rice & Co., No. 327 Montgomery st., San Francisco, on SATURDAY the 23d day of July, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

OEO. L. FAULKNER, Secretary.

2 Office, of the Company 411 Olay St., San Francisco.

Imperial Gold and Silver Mining Company, Lo-

cation, San Francisco District, A. T.

Notice is hereby given that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the above named company, there will be sold at public auction, at the office of the company, No. 410, Montgomery street, San Francisco, on Tuesday, the 2d day of August, 1864, at 2 o'clock P. M., to the highest bidder for Cash in United States Gold Coin, so many shares of the Capital stock of said Company, standing in the names of the following persons, as will be necessary to pay the assessment now due and delinquent thereon, together with all costs accruing for advertising sale, etc.

Assessment No. 1 of 50 cents per share, Levied March 17, 1864.

Correspondents in New York, LEES & WALLER, No. 33 Pine street.

Correspondents in London, BANK OF LONDON.

THE UNDERSIGNED GIVE NOTICE THAT THE ABOVE named corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and with the interior of this State, the neighboring State and Territories, and with Mexico; also with the At antic Cities, Europe, China, and the East Indies; for which they are provided with amp e facilities, and in conformity with articles of association will commence operations on the fifth day of July next, at the Banking House now occupied by Donoue, Ralston & Co., corner of Washington and Battery Streets.

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. Mills and Wm. C. Ralston as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in all business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members:

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upou each Certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Trustees:

D. O. Mills, Louis McLane, Wm. Norris, Jno. O. Earl, Herman Michels, W. C. Ralston, J. B. Thomas, Thos. Bell, A. J. Pope, O. F. Giffin, Jas. Whitney, jr.

San Francisco, June 18th, 1864. 26-1m

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for tuming Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

Disney's Cylinder Amalgamator,
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation on Sutter st., between Montgomery and Sansome, in the rear of the Vulcan Forge Machine Shop, where miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.

1-4t W. A. H. TOWN, Secretary.

Lloyd's New Amalgamator
Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 6 0 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15½ ozs., Ryerson's machine having only got 6 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Frnit Market, in this city, was obtained:

Gold.....$73 33
Silver..... 42

To the Ton.....$73 75

The assay being made by Messrs. Molitor & Co.

From 2 pounds of the same ore, worked for the same party, was obtained:

Gold.....$63 30
Silver..... 04

To the Ton.....$63 34

Assay made by Kellogg, Hewston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $75 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 34.2 per ton; and over the works at the mill, $62 54.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $-.19, Silver, $1.52, amounting to $2.71-1t0—equal to $361.33-1t0 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. C. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2 6.18-10. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.58-90—equal to $111.60 to the ton. Difference in favor of Lloyd being $114.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and is certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kustell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINed the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. There is a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumfereuce and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS, NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

JOHN SHAW,

26-5t President.

Bodie Consolidation Gold and Silver Mining Company, No. 2. Location of Mine, Bodie District, Mono county, California,

Notice is hereby given, that at a meeting of the Trustees of said Company, held on the 10th day of June, A. D., 1864, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable in U. S. gold coin, on the 13th day of July, 1864, to the Secretary, at office, S. W. corner of Clay and Montgomery streets, San Francisco.

Any stock upon which said Assessment shall remain unpaid on the said 13th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 25th day of July to pay the delinquent Assessment, together with costs of advertising and expenses of sale.

24-5t A. L. CHAMBERLIN, Secretary.

The advertisement of stock delinquent on the above assessment is postponed until July 16, 1864, and the sale thereof is postponed until July 30, 1864. By order of the Board of Trustees. (2) A. L. CHAMBERLIN, Secretary.

Beaver Gold and Silver Mining Company, Gold Hill, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 20th day of June, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 21st day of June, 1864 in United States Gold Coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before will be sold on Monday, the 8th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. WM. VALE, Secretary.

Office, Nos. 55 & 56 Exchange Building, N.W. corner Washington and Montgomery Streets, San Francisco. 26-4t

Blue Jacket Gold and Silver Mining Company, Devils Gate District, Lyon County, Nevada Territory.

And in accordance with law, and an order of the Board of Trustees, made on the 28th day of May, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the company No. 305 Montgomery Street, on the 16th day of July, 1864, at 12 o'clock, M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

W. F. HUGHES, Secretary.

Office, No. 6 Mead House, 305 Montgomery Street, San Francisco. 1

La Libertad Gold and Silver Mining Company, Cachachillas District, Lower California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 7th day of June, 1864, an assessment of twenty-five cents per share, was levied upon the Capital Stock of said company, payable on the 8th day of June, 1864, in United States Gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday the 8th day of August, 1864, to pay the delinquent assessment and costs of advertising and expenses of sale. By order of the board of Trustees.

WILLIAM VALE, Secretary.

Office, 55 & 56 Exchange Building, San Francisco, Cal. 26-4t

Lord Byron Gold and Silver Mining Company Devil's Gate District, N. T.

NOTICE.—The Annual meeting of the Stockholders of the Lord Byron Gold and Silver Mining Company, for the election of Trustees and transaction of other business, will be held at the office of the Secretary, No 620 Washington street, Room 3, San Francisco, on Wednesday, July 20th, 1864, at 7½ o'clock P. M. H. B. CONGDON.

25-4t Secretary.

Moonlight Gold and Silver Mining Company, Indian District, Humboldt County, Nevada Territory.

At a meeting of the Trustees of the above named Company, held November 4th, 1863, an assessment of one dollar was levied upon each and every share of the Capital Stock thereof, payable in United States gold coin, to the Secretary at his office, No. 8 Masonic Temple, San Francisco. Said assessment must be paid on or before the 20th day of July, 1864, as all stock delinquent on that date will be advertised and sold in accordance with law. By order of the Board of Trustees. (26-4t) LAWRENCE C. OWEN, Secretary.

NOTICE.

Notice is hereby given that a meeting of the Stockholders of the Moscow Gold and Silver Mining Company will take place on Monday, August first, 1864, at 4 o'clock P M. All shareholders are requested to be present as business of importance will be brought before the Company. By order of Trustees. GEO. STURTEVANT, Secretary.

1-5t Office, 608 Montgomery street.

McDermott Gold and Silver Mining Company. Devil's Gate District, Lyon County, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of June, 1864, an Assessment of One Dollar per share was levied upon the Capital Stock of said Company, payable on the 21st day of July, 1864, in United States gold coin, to the Secretary, or to Thomas McNamara, Superintendent at the mine.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the tenth day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale. By order of the Board of Trustees. GEO. A. BALL, Secretary.

Office, 509 Clay Street, San Francisco. 26-4t

Mechanics Gold, Silver and Copper Mining Company, Clayton Mining District, Clayton, Contra Costa County, California.

NOTICE.—There is delinquent upon the following described stock on account of assessments levied on the 26th day of May, 1864, the several amounts set opposite the names of respective shareholders as follows:

And in accordance with law, and an order of the Board of Trustees made on the 28th day of May. 1864, so many shares of each parcel of said stock as may be necessary will be sold at the office of the Secretary, on the 16th day of July, 1864, at the hour of 12 o'clock M. of said day. to pay said delinquent assessments thereon, together with costs of advertising and expenses of sale.

WM. G. WENDELL, Secretary.

Office, 240 Montgomery Street, corner Pine, San Francisco. 1

Porter Gold and Silver Mining Company, Jordan Hill, Butte county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of June, 1864, an Assessment of fifty cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary, or to J. L. PORTER, Superintendent, Yankee Hill, Butte county.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on WEDNESDAY, the 3d day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

THOS. C. McOALLAN, Secretary.

24-5t Office, No. 622 Clay street, San Francisco.

Prima Donna Gold and Silver Mining Company.—Location, Dovil's Gate District, Nevada Territory.

Notice is hereby given, that at a Meeting of the Board of Trustees of said Company, held on the 23d day of June, 1864, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable on the 24th day of June, 1864, in United States Gold Coin, to the Secretary. or to Franklin Morgan, at Silver City.

Any stock upon which said Assessment shall remain unpaid on Saturday the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 15th day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of sale. By order of the Board of Trustees. H. B. CONGDON, Secretary.

Office, No. 620 Washington Street, (Room 3) San Francisco.

26-5t

Quartz Mountain Gold and Silver Mining Company, Placerville, El Dorado County, California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 29th day of June, 1864, an Assessment of forty cents per share was levied upon the capital stock of said Company, payable immediately, in United States Gold Coin, to the Secretary, at the office of the company, No. 623 Montgomery street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 19th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees. GEORGE A. HILL, Secretary.

Office, No. 623 Montgomery street, San Francisco, California. 1

Quartz Hill Gold Mining Company, Placerville, El Dorado County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 23d day of June, 1864, an Assessment of forty cents per share was levied upon the capital stock of said Company, payable immediately, in United States Gold Coin, to the Secretary, at the office of the Company, No. 623 Montgomery Street, San Francisco, California.

Any stock upon which said Assessment shall remain unpaid on Saturday the 23d day of July, 1864, will be advertised on that day as delinquent, and, unless payment shall be made before, will be sold on Wednesday, the 10th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. GEORGE A. HILL, Secretary.

Office, No. 623, Montgomery Street, San Francisco, California. 26-4t

Rubicon Gold & Silver Mining Company, No. 1. Rubicon Gold & Silver Mining Company, No. 2. Rubicon Gold & Silver Mining Company, No. 3. Rubicon Gold & Silver Mining Company, No. 4. Keys District, Mono County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Companies, held on the 21st day of June, 1864, an Assessment of ten cents per share, was levied upon the assessable Capital Stock of said Companies, payable immediately, in United States gold coin to the Secretary.

Any stock upon which said Assessments shall remain unpaid on Saturday, the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 10th day of August, 1864, to pay the delinquent Assessments, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. J. P. VAN HAGAN, Sec'y.

Office, Rooms 7 & 6, 3d floor, No. 302 Montgomery street San Francisco. 26-4t

Rhode Island Gold and Silver Mining Company, Keys Mining District, Mono county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of June, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on SATURDAY, the 30th day of July, 1864, to pay said delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. W. MYRICK, Secretary.

Office, No. 526 Montgomery street, over Blue Wing Saloon, San Francisco. 24-5t

Sisters Gold and Silver Mining Company, Augusta District. Lander county, N. T. Office, 406 Front street, San Francisco, June 22, 1864.

Notice is hereby given, that a meeting of the Trustees of said Company, held October 17th, 1863, an Assessment, No. 1, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No. 2, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Both Assessments, No. 1, and No. 2, payable immediately, in United States gold coin to the Treasurer at the office of said Company, or to John Moffet, Superintendent, at the mine, in Nevada Territory.

Any stock upon which said Assessments shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with cost of advertising and expenses of sale.

25-4t J. FRANK MILLER, President.

Seely Gold and Silver Mining Company Big Creek District, Lander county, N. T.

Notice is hereby given that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of said Company, there will be sold at public auction to the highest bidder for cash, in U. S. Gold Coin, at the office of the Company, No. 1 & 2 Government House, corner of Washington & Sansome streets, San Francisco, on Monday, July 18th, 1864, at 11 o'clock, A. M. so many shares of the Capital stock of said Company standing in the names of the following named shareholders as will be necessary for the payment of Assessment No 2, for 25 cts. per share levied Oct. 1st, 1863. Assessment No. 3 for 25 cents per share, levied Nov. 21st, 1863. Assessment No. 4, for 50 cents per share, levied Feb. 9th, 1864, together with expenses of advertising and all other expenses of sale.

And in accordance with law, and an order of the Board of Trustees made on the 31st day of May, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the company, Room 8, 611 Clay street, San Francisco, on the 16th day of July, 1864, at 12 o'clock M., of said day, to pay said delinquent assessments, together with the costs of advertising and expenses of the sale.

O. BGWER, Secretary.

Office, 611 Clay street, San Francisco. 1

Schmeltzer Mining Company, American

District, Humboldt County, Nevada Territory.

A Stockholders' meeting of the Schmeltzer Mining Company will be held at the office of the company, 645 Clay st., on Wednesday, the 3d of August, 1864, at 7½ P. M., for the election of officers, and such other business as may be presented. M. G. ELMORE, Secretary.

San Francisco, July 2, 1864. 1-4t

Steamboat Silver Mining Company, Star District, Humboldt Co., Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 23th day of May, 1864, an assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States Gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on SATURDAY, the 16th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on TUESDAY, the 2d day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. G. PUTMAN, Secretary.

Office, N. E. cor. Jackson & Front streets, up stairs, San Francisco. 25-4t

Schmeltzer Mining Company, American

District, Humboldt County, Nevada Territory.

NOTICE.—There is delinquent upon the following described stock, on account of assessment levied on the 11th day of April, and 25th day of August, 1863, the several amounts set opposite the names of the respective shareholders, as follows:

M., of said day, to pay said delinquent Assessment thereon, together with casts of Advertising and expenses of Sale.

S. C. GARDNER, Secretary.

Office, 605 Sacramento street. San Francisco. 26-2t

SPONTANEOUS GENERATION.—The question of spontaneous generation, about which so much has been written within the last fifteen years, seems to be in a fair way to be definitely settled. According to the *Comtes Rendus*, the French Academy of Science has appointed a Commission to make a full investigation of the subject, by a careful enquiry into the evidence for and against the theory. The gentlemen who claim to have produced spontaneous generation, are invited to repeat their experiments in the presence of the Commission. The invitation has been promptly accepted, and learned gentlemen, who have taken an active interest on both sides, have signified their willingness to submit the questiou to the fair and final decision proposed. Those favoring the theory appear to he quite sanguine of success, and express their most perfect confidence in the ability and impartiality of the Commission.

BEEF STEAKS are said to have been invented by Lucius Placus, a Roman condemned by Trajan, for some offence, to act as one of the menial sacrificers to Jupiter. The fragments of the victim being laid upon the fire, the unfortunate seuator was compelled to turn them. In the process one of the slices slipped off the coals, and was caught by Placus in its fall. It hurued his fingers, and he instinctively put them into his mouth; in that momeut he made the grand discovery that the taste of a slice thus carbonated was infinitely beyond all the old, sodden cookery of Rome. Turning the whole ceremony into a matter of appetite, he swallowed every slice—deluded Trajan, defrauded Jupiter, and invented beef steaks.

A LITTLE son of M. B. Waugh, five years old, in attempting to get up on a heavily loaded lumber wagon, for a ride, fell under the wheel and was instautly killed, at Sau Jose, on Wednesday last.

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged indifferent branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test with the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

JOSEPH BRITTON,	A. S. HALLIDIE.
H. D. DUNN,	P. B. DEXTER.
E. NUNAN,	P. J. O'CONNOR,

STILL IMPROVING!

—VOLUME IX—

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Fraucisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Caution.—All persons are cautioned against purchasing Certificates No. 43 for 20 shares, and No. 435 for 3 shares, (unassessable) in the Great Consolidated Boise River Gold and Silver Mining Company, the same having been fraudulently obtained from the subscriber. Transfer of same has been stopped on the books of the company.

1 J. W. REED.

HENRY V. POSER,

Ornamental Plasterer.

No. 620 Market street, North Side, between Montgomery and Kearny, San Francisco.

OLD WALLS THOROUGHLY REPAIRED, CRACKS AND fractures in all kinds of plastering so repaired as not to be observable. Whitening and Coloring in Zinc, warranted to give satisfaction and so put upon the walls that it will not rub off.

☞ Terms Moderate. ☜ 2-1m

Notice of Dividend.

At a meeting of the Trustees of Crescent Quartz Mining Company, held June 20th, 1864, a Dividend of Fifty dollars per share was duly declared, payable on July 1st, 1864, at the Office of the Company, Indian Valley, Plumas County, Cal., or in San Francisco, at the office of Isaac Clazier & Bro., 311 Clay street. [26-4t] WM. A. BOLINGER, Sec'y.

Phœnix Gold and Silver Mining Company, Reese River District, N. T.

NOTICE is hereby given, that on Thursday, July 14th, 1864, at 11 A. M., at the Office of the Company, No. 305 Moatgomery Street, San Francisco, there will be sold to the highest bidder for cash, so many shares of the Capital Stock of the above named Co., standing to the credit of the following named persons, as will be necessary to pay all assessments now due, together with costs of advertising and expenses of the sale, unless the same shall have been previously paid, to wit;

Contents of Present Number.

No. 3—Volume IX.—July 16, 1864.—The Industrial Exhibition; The Art of War; Power of the Magnet; The Conflagration of the World a Scientific Possibility; More about the Theory of the Mines of the Sierra Nevada; How to Detect Adulterated Quicksilver; The Cause of the Flow of Oil Wells; The World's Drought of 1864; The Salt Trade of Washoe; New Era in Portraiture; Formation of Iron by Metallurgical Insects; Old Without Knowing It; Eating when Sick; Weather and Health; Efficacy of Oulons; Boiling Water; Shareholders' Directory; Stock Reports—Sales and Prices Bid and Asked; Inventors and Inventions; The Leader Gas Engine; The Rivet Process; Improved Hoop Fastening; A New Journal Box; Value of Evening Hours to Mechanics; Value of Skillful Stoking and Firing; Iron Ore in Reese River; Our Summary of Mining News—Humboldt, Washoe, Reese River; Washoe Coal Co.; Volcano in Butte Co.; Gold in a Corner; Looking Eastward; Esmeralda; Mining Share Market; From Owensville; Songs of Birds; Items of Interest; etc.

The Mining and Scientific Press is published every Saturday morning. Each number contains SIXTEEN PAGES of SIXTY-FOUR COLUMNS. Terms, by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very fair.

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

THE INDUSTRIAL EXHIBITION.

We feel that we cannot too often or too earnestly urge upon our mechanics, and all others interested, the importance of prompt and personal exertion to render the forthcoming Exhibition that which all desire and expect to see it—a perfect success, and an important stimulus to California industry. Those who have the preliminary executive management are doing everything reasonable within their power, to make it so; but all their efforts will be powerless unless properly aided by those for whose especial benefit the Exhibition has been planned. Every one who can, should feel it his duty as well as privilege to contribute whatever he can in aid of the enterprise. Let our mechanics and manufacturers and our tradespeople of whatever class or order, begin in season to make their arrangements and preparations. It is none to early to commence now. The Institute appeals to "all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and to forward for Exhibition such articles as they may invent, discover, or make that may be useful, instructive, curious or suggestive."

The invitation is broad and comprehensive, and the object in view to be attained, is noble and useful in an eminent degree. The rules and regulations of the exhibition will be found in our advertising columns, and any farther information, which may be desired on that point may be obtained by addressing William Patton, Corresponding Secretary.

The proprietors of the Mining and Scientific Press, have made arrangements with the Executive Committee for the publication of a daily issue of their paper at the Pavillion during the continuance of the Exhibition. Inventors and exhibitors will have a fine opportunity, through the columns of that paper to present the claims and advantages of their machinery, manufactures, goods, etc., to the thousands of strangers who will visit the city during the period of the Exhibition. We shall devote the paper exclusively to matters connected with the Exhibition, and those who desire illustrations, which are not already prepared, should attend to the preparation of the same at once.

THE ART OF WAR.

Since the breaking out of the present unhappy civil war, the old idea that had begun to be too prevalent, that nations should learn war no more, seems to be pretty much abolished, for the present at least, from the American mind. We hear now very little about Peace Societies. Even the staid and peace loving Quaker descendents of Penn, rush to arms, as often as the rebellions hosts are found threatening Pennsylvania soil with their presence. The apostles of peace of former days, are now generally preachers of war.

War as an art and profession is rapidly assuming a prime importance in our system of education. It is being introduced even into our common schools, all through the Eastern cities, where the young idea is literally taught to shoot. Our colleges and academies, everywhere, make their drill exercises, as much a matter of course as any of their literary exercises.

Our own State is also endeavoring to keep up with the times, and one of our leading literary institutions, in the San Jose Valley, has already been furnished with a stand of arms by the State Executive, in order the more thoroughly to perfect the pupils in the mysteries of this now popular art. In our last issue we noticed the reception of a circular from the officers of the State Guard of this city, who propose immediately to open classes for drill, at the armory, to be composed of young men 14 to 18 years of age. Our citizens everywhere, all through the country, are spending, in the aggregate, millions of dollars in this direction, to thoroughly organize and perfect the military organization of our citizen soldiery; while hundreds and thousands of our brave and devoted people, are baring their breasts and shedding their blood in the actual conflict of war upon the bloody field of battle.

War is an art which requires much study. In the principal European nations it absorbs the chief national revenue. In France there are nine, and in England two Normal Schools of war where men are prepared as teachers of the art, as in our normal schools we prepare men and women for teachers in common schools. Modern inventions have elevated the art of war from a mere exhibition of brute force, to a science of the highest grade. Armies are no longer machines, but instruments of mind as well as power. This mind power is now distributed through the rank and file instead of being confined to officers. The old practice in battle was to shoot from the breast. The soldier is now taught to shoot from the eye—to shoot to kill. It is assumed that the mind must be brought into active exercise with every effort of each individual soldier. The Emperor Nicholas of Russia, recognized this principle when he resolved to emancipate his serfs. He did it full as much to raise the standard of his soldiery, as from his innate sense of justice. The southern slave, in our own country, will never make a soldier. Our whole army is a unit in according a most soldierly hearing to the southern freedman, in battle and camp.

Killing, in war, is now done scientifically. Firing by command is now but little practiced in actual combat. Each soldier fires when he gets his aim, and he must exercise his brain with coolness and skill to make his aim effective.

The incidents which we gather up, from time to time, by the perusal of "letters from the front," are characteristic of the new *animus* which pervades the ranks at the present time. At one moment, we are told by these correspondents, that the opposing lines, each behind entrenchments, are handying jokes and witicisms from one to the other with the best apparent good nature, and at the next moment a single report or volley is heard, as one or the other catches sight of some luckless soldier who exposes his person to his adversary. When the soldier or the sharp-shooter takes deliberate aim at his enemy he does not stop to think of the home affections which cluster around his victim, or the desolation which the missile he is about to speed will introduce into some unhappy household. Not at all; he is only practicing the art, in which he has been drilled.

These things present phases both terrible and hopeful to the cause of humanity. As the art of killing becomes more and more skillful in practice, is there not reason to hope the dread of war will increase. Will not the terrible lesson which our own unhappy war is now reading to the world, act as a powerful incentive to peace. At least will it not greatly lessen the danger of any future war against or among ourselves? Let us hope so, at all events. Can we not see in the present attitude of England and France an evidence of the truth of this assumption? They are each powerful nations, skilled in all the modern improvements of killing. They look upon the present war in Denmark from opposite stand-points. Each is eager, but neither dares to take the fatal step. The realities of war between two such nations would be far more terrible now than they were in the days of the first Napoleon. Notwithstanding all the coolness now manifested in the study and practice of war, the instinct of life is not yet dead in the minds of men. The hope of those who go into battle is still immunity from death. When war becomes so scientifically fatal as it now is and must hereafter be, may we not hope that men will be more slow to make the fatal plunge, and that the time when "nations shall learn war no more" will come all the more speedily from the fatality with which it must be attended.

Agriculture.—Agriculture must have flourished at an early period in England. When the Emperor Julian was re-building the ruined cities of Gaul, six hundred large barques, framed in the forests of Ardennes, made several voyages to the coast of Britain, and returning from thence laden with corn, sailed up the Rhine, and distributed their cargoes to the several towns and fortresses, along the banks of the river. Computing these six hundred ships at only seventy tons they were capable of exporting 120,000 quarters, and the country which could bear so large an exportation must have already attained an improved state of agriculture. This is reported to have taken place about the year A. D. 359.

Power of the Magnet.

The smallest natural magnet generally possesses the greatest proportion of attractive power. Sir Isaac Newton wore a magnet in his ring which weighed only three grains, yet it was able to lift 746 grains, or nearly 250 times its own weight; whereas magnets weighing above two pounds seldom lift more than five or six times their own weight.

Iron is principally the only substance attracted by the magnet. The degree of magnetic attraction depends on the strength of the magnet itself, the weight and shape of the iron presented to it, the magnetic or unmagnetic state of the body, and the distance between them. All iron bars standing erect or fixed perpendicularly, (such as iron railings in fences, etc.,) are magnetic, the north pole being at the bottom and the south pole at the top. It is also a curious fact that the uppermost part of the iron tire of a carriage-wheel attracts the north end of a magnet, and is consequently a south pole, while the lower part of the same iron, in contact with the ground, attracts the south end of the needle, and is therefore a north pole. Turn the wheel half around and the poles become immediately reversed. The magnetic attraction resides wholly in the surface of iron bodies, and is independent of the mass. An empty bomb shell will attract as strongly as a solid sphere of the same material. The cutters, in gun-boring, become magnetic, in consequence of being continually rubbed in the same direction. Wedgewood's black ware, which is made of basalt, attracts the magnet strongly.

The Conflagration of the World a Scientific Possibility.

If we know the velocity and weight of any projectile, we can calculate with ease the amount of heat developed by the destruction of its moving force. For example, knowing as we do the weight of the earth, and the velocity with which it moves through space, a simple calculation would enable us to determine the exact amount of heat which would be developed, supposing the earth to be stopped in her orbit. We could tell, for example, the number of degrees which this amount of heat would impart to a globe of water equal to the earth in size. Mayer and Helmholtz have made this calculation, and found that the quantity of heat generated by this colossal shock would be quite sufficient not only to fuse the entire earth, but to reduce it in great part to vapor. Thus by the simple stoppage of the earth in its orbit, the "elements" might be caused to "melt with fervent heat." The amount of heat thus developed would be equal to that derived from the combustion of fourteen globes of coal, each equal to the earth in magnitude. And if after the stoppage of its motion, the earth should fall into the sun, as it assuredly would, the amount of heat generated by the blow would be equal to that developed by the combustion of 5,600 worlds of solid carbon.—*Heat considered as a Mode of Motion, by John Tyndall.*

Washoe Bullion.—The Washoe *Herald*, of the 9th instant, says that from the first of the present month, to that date, there had been shipped from Virginia City the very nice little bulk of 12,685½ pounds of bullion, of the value of $304,750 17, according to the way-bills of the express companies. And yet people say "Washoe is played out." We think its mines are played out to a very pretty tune just now.

Washoe Mills.—Quite a number of the Washoe mills are at the present time undergoing the the process of "overhauling."

[Written for the Mining and Scientific Press.]

More about the Theory of the Mines of the Sierra Nevada.

Editors Press:—Considering the evident truth, that a limited number of mankind are busily engaged in gulling the balance with theorics, I have a great admiration for all theoretical views, particularly when they disdain the ungainly aid of established facts or get up proofs to order; and only require absolute human faith, to complete a triumphant circle of xistences.

In the Press of June 25th, I notice a theory of the mines of the Sierra Nevada, which, at least possesses the merit of being something new, although starting out with three propositions of a somewhat popular and altogether hypothetical nature, equally capable of sustaining other theories. What follows is substantially new and suggests ideas which it is but just to "F. A. H." to acknowledge have not been advanced by La Place, Newton, Humboldt or other scientific authorities. With the unfolding of his peculiar views "F. A. H." tells us how our earth was constructed. The description presents us a globe, somewhat different from one that might have been given by yonder layer of brick and mortar, but nevertheless a sphere rounded off in good order and prettily streaked with the one thing that gives a finishing touch to all things evil or saintly—gold. Permit me to condense the account.

It seems that Dame Nature once set up a blast furnace and turned out a fiery notamed world, much given to revolutions, and apparently foredoomed to raise "Old Nick." Finding a natural coolness arising and that earthly elements like those of society could not get along without an upper crust, the good dame resolved to arrange matters and set up housekeeping. Mindful of the strain of the heavier material, she piled it up in the extreme depth of the structure. Gold having great specific gravity, was in spite of its positive worth, bundled off into the cellar. This was a well balanced world; but still there was a second mistake in the isolation of material—too much exclusiveness; the crockery and earthenware chanced to be very handy in the attic but the gold and silver to buy garden truck and mutton chops, lay buried under the iron and copper ware down below. It therefore became necessary to obtain a ready exit for the different central elements and their sociable gathering at the surface. The contract for running these adits must have been taken by the Camanche contractors with the subsequent idea that there was nothing but greenbacks at the bottom of the job, for it seems that everything was ventured by degrees. The first effort brought alkalies, the later iron, and in the end there was established a series of fissures, assorted sizes. By the leverage of the outbursts and subsidence of the solid crust, mountains were formed. These mountains were model affairs, furnished with all the modern conveniences, scuttles above and arched vaults contingent to the pavements at their bases. Gold, under a hard pressure and the foreshadowing of greenback issues, must go up and in this case did, carrying with it all strata of quartz not previously located by incorporated companies. The present discovery of gold around these scuttles is a sure sign that there is plenty more below in the vaults. It was so in the past era of the mint and why should not Nature with a wise aforethought copy after one of Uncle Sam's metallurgical operations. Nature next let out the attic rooms to certain elements, hydrogen and oxygen, who, being reduced in circumstances, were compelled to take in washing and played havoc with the rocky linings of the tenements in their efforts at making shifts and bed spreads. The climax came with the introduction of a set of reasoning animals privileged to procure patent rights for any improvement in getting up worlds, and particularly requested to make themselves happy by securing the greatest good to the least number.

If Dame Nature was pleased with the construction of a world after this fashion, she has the consolation of knowing that mankind do not trouble themselves to secure a better one. For my part, I am satisfied with the orb so long as it is tenantable, and has numerous philosophers to tell how the thing was done. But, when "F. A. H." in the exhuberance of confidence informs us that there is a fathomless streak of gold and quartz just eight miles wide, located at the base of the Sierra Nevada, and destined to throw all past mining operations into the scale of insignificance, I feel inclined to ask him who shall be the individual to give us a practical demonstration, at his own expense? The question arises, now that the secret is out, will the knights of mere physical labor or capital lend encouragement to an idea that in their jealousy they must forsee will eventuate in the sublime triumphs of intellect? Who but the bold discoverer is better fitted to be a martyr if necessary? Certainly one who has the courage to present such logical conclusions as are to be found in the article under notice will not feel at all abashed at the idea of a mere personal sacrifice—even though the deductions, costing but a dash of the pen may demand the expenditure of many million strokes of the pick to reach the point of demonstration, satisfactory to all doubters.

I cannot conclude without giving select specimens of "F. A. H's" logic. Succeeding the spectacle of rocky masses of immense thickness sedately hanging and posturing by their upper edge, he says that gold having been upheaved last, of course fills the fissures of the previous upheaval and contraction, which he locates at the base of the mountain chain. The superficial base of the Sierra Nevada being quite near the Sacramento and San Joaquin rivers and the real base under at least twelve hundred feet of earth much nearer the Coast Range, the wonder is, how "F. A. H." discovered these fissures and their contents. Apparently unaware of the fact that solids and fluids expand but a fraction of their respective bulks before being volatalized, he equalized the specific gravities of bodies, by their unequal expansion and great heat, and thus succeeds in keeping gold and quartz in one stratum, and by the same arrangement pumps them up through all other strata. Perhaps however "F. A. H." can render the law of expansion by heat conformable to his theory by procuring its amendment by the next legislature.

Pundit.

How to Detect Adulterated Quicksilver.—Mercury is often found in the market wilfully adulterated with lead, tin, and bismuth. Of lead, it can absorb or dissolve almost one-half of its weight, without losing much of its liquidity. This adulteration can easily be discovered by rubbing some of the metal on the open palm; if it soils the skin it is adulterated—if pure it leaves no trace. Besides, if dosed with lead, it will leave a tail behind—"*il fait la queue*" to use a French expression—that is, the drops, instead of being globular, will assume an elongated form, and a more or less flattened surface. Some of these observations may be, perhaps, useful to the gold miner, as many complaints have lately been heard about the impurity of the quicksilver sold in the mines, which fact is also proved by the frequent occurrence and admixture of base metal in the amalgam-gold, probably, in most cases, by artificial means.

Quicksilver—How to Test.—Quicksilver, after being extracted by the plain process of retorting, is seldom quite pure, and generally contains a small proportion of other metals. The eminent naturalist Priestly suggests a very simple method to purify mercury, by merely shaking it strongly in an iron flask, and renewing the air in the same repeatedly with a pair of bellows. By this manipulation a black powder will be formed on the surface, which can easily be separated. If no more of this dust is formed the quicksilver may be considered pure. In this state it will always give a clear sound when agitated in the flask, while an admixture of lead will make it sound dull as if the vessel were made of potters' clay.

The Aissa-Outra, about the maddest of the Mohammedans, have celebrated the birth-day of their prophet at Algiers, in a very *outre* manner. Some burned their tongues with hot iron, and did the trapeze on sword blades, some eat scorpions, (much to the disgust of the scorpions,) some gouged out their own eyes with a piece of steel, and some were so religious as to swallow the prickly leaves of the cactus.

A Water Spout was struck in the town of Unionville, Humboldt county, Nevada Territory, two weeks ago last Monday. The *Register* says: "Heavy gravel was thrown up, and all sorts of rubbish drifted in the streets and through the gardens for a few minutes. Floors were flooded, and several houses were in danger of having their bottoms knocked from under. Ditches were in lively demand, and responded with so much activity that no serious damage was done."

An enterprise has lately been set on foot in France for the manufacture of guano from fish. The refuse from fisheries has been for some time past employed in this manner; but it is now proposed to organize fisheries for the purpose of manufacturing the article, which possesses several advantages, decomposing neither too quickly nor too slowly, and exhaling no ammonia.

It is proposed to build a new post office at Liverpool—300,000 more letters passing through the city now than was the case eight years ago.

The hay crop on the mountain ranches of Calaveras will average better this season than ever before.

The Cause of the Flow of Oil Wells.

As we have frequently stated, says the Oil City *Register*, scarcely any two of our practical operators here, entertain precisely the same theory in regard to the causes which produce the flow of the oil from the wells. We have been favored with the following extract from a letter written by a gentleman whose practical experience and good judgment entitles his opinions to the highest consideration. This theory we accept as the clearest and most reasonable one we have yet seen advanced.

A very common inquiry is, "what makes the oil-wells flow?" The answer, equally common, is "the gas which we strike, throws the oil." Thus conveying the impression that both oil and gas exist in the bowels of the earth. This is the common theory, the generally received opinion.

My opinion—and 'tis but an opinion—is that the theory is erroneous. I venture to assume the position that gas—as such—does not actually exist in the subterranean cavities whence we get our oil; but that it is created, so to speak, and eliminated at the time we "strike oil," and not before; that the gas was, prior to the "strike," veritable oil, and nothing else; and that so soon as we remove the pressure from the oil, it being highly volatile, the gas is eliminated.

It is well known that gases are reduced to liquids by compression, and liquids to solids by cold, and *vice versa*.

Is it not reasonable to assume that a liquid, at the depth of five hundred feet from the surface, would be, and is subjected to a high degree of pressure, and that if a gas existed there it would, by virtue of that pressure, be made to assume that form requiring the smallest amount of space?

I believe it is not denied that oil and gas are chemically the same; that the oil obtained from all flowing wells is nearly the same in gravity, and that it is very volatile until the gravity is reduced by exposure to the atmosphere, or the application of heat. So volatile that its volume is materially diminished within the first few hours.

So sudden is the change from the liquid to the gaseous state, when ejected from the wells, that ice is sometimes formed at the orifices, even in the warmest weather.

It is a well known fact, that in the conversion of solids to liquids, and liquids to solids, a large quantity of heat disappears, or becomes latent. Bearing this fact in mind, the rationale of the presence of ice at the mouth of a flowing oil well is readily explained. The moment the drill enters the cavity, or fissure in the rock containing oil, the pressure—excepting that of the atmosphere and water—is removed, and the oil being volatile, a portion of it is suddenly converted into gas. Occupying more space in the gaseous state, being elastic and lighter than oil, it—the gas—finds vent through the puncture made by the drill of the operator, carrying with it, in its hasty exit, its own parent, the oil. That the exit is hasty, and the relationship not yet wholly dissolved, is fully proven by the violently excited and spumous condition of the parties, so to speak, upon arrival.

But the process of the change requires heat; hence we find circumjacent substances robbed of a portion of the heat they contain. Water being present, yields to the exigencies of the case so liberally that it even loses its own identity. The result is ice.

Upon no other hypothesis, I apprehend, can this phenomenon be rationally explained.

I have thus given you, in compliance with your request, my opinion as to the cause why our wells flow; and some of the reasons "for the faith that it is within me."

I may be correct; I certainly may be in error. If I have advanced a single idea that may furnish yourself or friends "food for thought," I may congratulate myself upon having done something, however little it may be, in aid of the solution of an obscure problem.

Very Respectfully Yours, J. C. H.

Artificial Moonlight.—A new mode of lighting has been introduced at a Baptist church, recently built at Philadelphia. There is not a gas-burner in the audience room. In the panels of the ceiling are thirty circles of ground glass, two feet in diameter. Above each of these, in the loft, is an argand burner, and over the burner a powerful reflector. The effect is just about the same as if there were thirty full moons shining in the ceiling. The light is not sharp and intense, but abundant and mellow, and not painful to the eyes.

Dried Up.—There is no water running at the present time in Bear river at Bartis Crossing. The oldest inhabitant has no recollection of such an occurrence having taken place before.

On the first three days of last week Wells, Fargo & Co. shipped from Virginia 5,289 pounds of bullion, worth $127,959.83.

The World's Drought of 1864.—In connection with the wide spread drought of 1864, and the extraordinary developments of the meteorological phenomena of the Northern Hemisphere, as observed throughout North America and Europe, which is the theme of comment in intelligent circles in both continents, we have seen but meager notices of its effects in the Southern Hemisphere. From casual remarks in our exchanges it appears that California and the North Pacific are in sympathy as to excessive drought with countries and climates in her far south meridian and antipodes. The commercial advices from Buenos Ayres of February and March (their summer) state that the provinces of La Plata were experiencing one of the severest droughts ever known in the history of those countries, attended with immense losses of animals from want of pasture, and hurricanes of dust and sand. Similar notices reach us also from Australia, where it is estimated from the general failure of the cereal crops, consequent on the want of rain and the effects of hot winds, that wide spread loss and suffering must ensue to the country. As the Canaries and Azores are also this year suffering from famine and hunger, resulting from their lack of ordinary rains and excess of warm winds, it must be that our planet at large is suffering from "low water in her boiler, and may burst." The exhibition of such phenomena, or of any storms or general climate changes of violence, has never been noted before in history or science.—[Exchange.

The Salt Trade of Washoe.—Persons at a distance, who read of the enormous shipments of the precious metals from Washoe, are little aware of the richness of this Territory, in other useful and valuable substances found in profusion within its limits. There are probably thousands of persons who have resided in the Territory for a year or two, who are unaware of the extent and value of the salt trade in this immediate vicinity of Virginia. In fact, there are very few persons who are aware that the Sand Spring Salt Mining Company manufacture and sell the enormous quantity of 500,000 pounds of salt per month! To haul this salt from the mine into town, the company constantly employ seventy large teams, and pay $10,000 to $15,000 per week for freight! this company themselves owning a number of the finest teams in the Territory, having $80,000 invested in this branch of their extensive business. Large as this enormous production of salt may appear, it scarcely equals the demand—the Gould & Curry company alone using forty-five tons per month. Besides this Sand Spring Salt Company, there are several others in this Territory, which also do a large business. The salt trade of Washoe is becoming of nearly as much importance as its mining, and had we a railroad, to make the cost of transportation less, Washoe salt would become as important an article of exportation as its famous bricks.—*Washoe Herald.*

New Era in Portraiture.—We notice the following in a late number of the New York *Evening Post:*

A new era in portraiture is predicted from the discovery of Swan, who presents a solid lifelike likeness of any one inclosed in a cube of chrystal. The effect of the new process is to exhibit the subject of the portraiture with lifelike verisimilitude, and in natural relief. You take up a small case, and look through what appears to be a little window, and there stands or sits before you, in a pleasantly-lighted chamber, a marvelous effigy of a lady or gentleman, as the case may be. The projection of the nose, the molding of the lips, and all the gradations of contour, are as distinct as if an able sculptor had exercised his skill; but the hair and the flesh are of their proper tint, and the whole thing has a singularly vital and comfortable look. Indeed, were it not for the reduction in size, it would be difficult to avoid the belief that an actual man or woman, in ordinary dress, and with characteristic expression, was presented to your eye. The Swan system is about to be introduced into the United States.

Progress in England.—England shares the general progress of the world. The principles of free government and liberal institutions are there, as well as on this side of the Atlantic, rapidly developing. A reform bill has failed, but only by a small majority. Mr. Gladstone has declared himself in favor of manhood suffrage; in other words, that every man in England who is not a felon or an alien shall have the privilege of voting. This places Mr. Gladstone, who has always been conservative and timid in reforms, by the side of Bright and Cobden, and the radicals may well rejoice at his accession, for it assures them of a speedy victory. England's manhood is now in battle with England's aristocracy, and we wish the cause God speed.

Last year, at this time, Great Salt Lake City had not a single bank; now she has three, and the indications are that all of them are doing a prosperous business.

Formation of Iron by Metallurgical Insects.

A Swedish naturalist, M. Sjogreen, has recently published a very curious memoir on an iron mineral, which is, he says, the direct work of infusorial animalculi living in the midst of sweet water. The ferruginous mineral known under the name of lake ore is sufficiently abundant in certain Swedish water-courses to be submitted to treatment in iron works. The Swedish naturalist has succeeded in grasping the very strange mode of the formation of this mineral, which insects seem, if we may so speak, to weave in the midst of water, as a learned micrographist (Ehrenberg) had already observed with regard to slimy iron produced by fossil animalculi (*Gaillonella ferruginea*). The memoir of M. Sjogreen was composed with more especial reference to certain specimens of minerals shown at the International Exhibition in London, in 1862; and we may note with advantage some of the most salient facts stated by him.

The iron mineral known as lake ore is met with in various lakes and water-courses in Sweden, but principally in the province of Smaland, situated in the southern part of the country. This mineral assumes five different forms, which are designated by as many different names; it comprises 20 to 60 per cent of oxide of iron, mixed with oxide of manganese, 10 per cent of chlorine, and some few hundredths of phosphoric acid, and is always found in the bottoms of lakes. The bearings extend to a length of 660 feet, range from 17 feet to 33 feet in breadth, and are from eight inches to thirty inches in thickness.

In 1847 and 1849, M. Sjogreen was enabled to observe the mode of formation of the ferruginous grain which was the direct result of organic life. A lake in his neighborhood had fallen much below the ordinary level, and enabled him to follow the evolution of the mineral. The bottom of the lake was in part laid bare, from the extreme lowness of the water, but there still existed depressions, filled with water, occupied by insects or infusorial metallurgists. These depressions presented a strange and marvellous spectacle. At the bottom of one, which was about three feet in diameter, small beings of different sizes agitated themselves on the mineral, some being visible to the naked eye, while the others were so small that without a magnifying glass it would have been impossible to discern them. All were actively engaged in enclosing themselves in a metallic cavelope, just as the caterpillar encases itself in a cocoon; the work seemed to the spectator to be effected in a systematic manner. The small being, with the aid of a network of black and white filaments, designed the exterior form of the grain; the shell of the minute edifice was formed with an opening in the center, and the exterior was similar to the interior, although six or eight times as large. From the center, where he was placed, the insect grouped round the filaments, rayons, or spokes, of a brown color, enclosing himself with prodigious activity. If one of the globules were taken into the hand with a little water, the small being might be seen at work, but if the water were allowed to run off, the whole globule crumbled into a flat mass, in which some feeble movements were visible for some instants, when all soon stopped once and forever. These flat masses explain the formation of what is known as minery-ochre. It may be remarked that these small beings do not make globules all of one size, but that the dimensions of each globule are always proportioned to those of the animal which is to inhabit it.

Grouping together all these observations, M Sjogreen thinks that lake mineral is produced by infusoria living in water courses, that these infusoria, select spots at their convenience, in order to perfect their works, and that calm waters, without any current, are indispensable to them, because mineral is never found in the midst of a current of a river, nor at spots or places at which they make a bend. Lake ore is only met with at certain points, on beds of sand or clay, and not being spread everywhere uniformly, it may be concluded that it is due to an organic cause, for if it was a precipitate or sediment it would be distributed uniformly on the whole bed of the lake; if it was due, on the contrary, to the action of water on certain earths, it would be found in the same lake everywhere where this earth is met with, which is contrary to experience. The mineral exists at certain points, and always the same, in regular layers or banks. In examining it with care, the animal may be perceived in a petrified state in each grain, but still very recognizable in respect to form and color; and it is very probable that the small quantity of phosphoric acid which the analysis reveals is due to the existence of these beings which, having accomplished their task at the bottom of the lakes, envelope themselves in metal in order to die in repose.

If it is asked from whence proceeds the iron employed by these marvellous architects, in the construction of their retreats, it may be replied that this origin is not doubtful, but that iron exists in the water in a soluble state—or, rather, that the water borrows it from the surrounding lands. Lake mineral is produced with considerable rapidity; in certain lakes from which there had been extracted, twenty years previously, all the metallurgical crop—if we may use the word—there was again found, after this yield, a fresh harvest of almost equal abundance.

The extraction is effected somewhat in the following manner (we may remark that this will be the first occasion on which our readers have heard of a fishing operation in which the fisherman is a miner, and the fish a mineral):—The fishing takes place at the end of autumn, when the water of the lake is covered with ice of a thickness of from two to three inches. Small holes are pierced in the ice at the point where the lowest depths are supposed or known to be; through these holes a long rod is driven, and either by the particular sound of the mineral struck at the bottom, or by the examination of the debris brought up, the existence of ferruginous deposits is recognized. The fisherman having thus recognized a bearing, marks its limits by means of small branches stuck in the ice, and the space which he encloses in this manner becomes his property, to which no other person can come to pursue researches until the close of winter. Some months later, the ice having become sufficiently hard for the purpose, the fisherman makes a hole about three feet in diameter, which enables him, by means of a long rod, to sink to the bottom of the lake a sieve, and then a rake about two feet in size. By the aid of the rake he collects the mineral into a heap at the bottom of the lake; then taking a smaller rake he fills his seive, which he then draws up filled with mineral with sand and clay. All this *detritus* is submitted to careful examination, and by shaking it on a seive placed in the water, the sand, mud, &c., are easily separated, and the mineral retained. After this, all that remains to be done is to go and sell at the blast furnace the produce of this singular fishery. A skillful operator will collect half a ton of mineral in a day, so that the work may become tolerably lucrative; the inhabitants of the province of Smaland accustom their children very early to the fishing process, the success of which depends upon the skill of the workman.

The Swedish, and even the Russian, iron-works hold this lake mineral in high esteem, and make an important consumption of it. M. Sjogreen is of opinion that it would not be impossible to acclimatise in other countries than Sweden the insects producing this curious mineral; but to attain this object it is necessary to begin by finding waters naturally charged with salt of iron in a state of solution, and furnishing the ferruginous matter on which these astonishing architects operate. It is evident, as has before been remarked, that the infusoria borrow the iron given to the waters of rivers and lakes, or, rather, to the earth surrounding these waters, in the same manner as mollusca borrow the carbonate of lime in their shells from lime dissolved in the waters of the sea. As crawfish, transported from a calcareous to a granitic soil, cannot repair or form their testaceous characteristics, so the metallurgical insects of Sweden could not live and weave their marvellous metallic woofs except in places in which nature had previously collected more or less abundantly the ferruginous salts.—*London Mining Journal.*

How Health Brightens Things.—God has so knit the mind and body together, that they act and react upon each other. Who has not felt that the state of health gives a coloring to everything that happens to him? One man, whose health is depressed, sees his own fireside that used to burn so cheerily, only covered with gloom and sadness. Another, of a bright and joyous mind in the full vigor of health, will go forth and the very desert to that man's eyes will rejoice, and the very wilderness to his view will blossom as the rose, and the saddest strains in nature will sound to him the most joyous and brilliant. A sufferer goes out and looks on nature and its roses are all become thorns, its myrtles all look like briars, and Eden itself seems like a desert, and the sweetest minstrelsy of the grove and the forest sounds to him like a wild and wailing minor running through all the sounds of nature.

The *London Times* is said to have the enormous average income, from all sources, of about $60,000 a week, or three millions a year! No wonder that such news establishments, whose Argus eyes look to every part of the globe, and whose trumpet-tones speak to congregated nations, should be regarded as "the fourth estate of the kingdom." Newspapers give utterance to the millions, and concentrate in themselves an aggregate of power, to make thrones tremble and monarchs turn pale. They are a very burning glass, gathering and concentrating to one terrible focal point, the rays of thought, conviction, and sentiment, over the wide circle of human affairs.

About one thousand Mormons from England, Scotland and Wales, on the way to Salt Lake, passed New York June 12th.

Old Without Knowing it.—In our rambles about the city yesterday, it occurred to us that there were hundreds of men on the Pacific Coast who have grown old without being aware of the fact. There are many men here who came to this coast ten or fifteen years ago, and yet to-day they do not realize that they are any older than the day they landed. We were led to think upon this matter by meeting an old man whose white locks, escaping from under his tattered felt hat hung upon his shoulders, while his snowy beard spread low upon his breast; suspended at the end of a stick he carried his blankets and carpet sack, and strode along with head erect and confident step, as though certain that he was near to his fortune. He did not realize that he had grown old in gold hunting—doubtless it appeared to him but a very short time since he started out in pursuit of the "big thing," which, although it had heretofore eluded him, must soon fall into his hands, when away he would go to the old home and the dear ones there to make them all happy—the dear ones whom he expects to find as gay and youthful as himself, for since he left them all it appears to him that the finger of Time has not moved. As we passed along the street we kept a sharp look out and easily discovered a dozen more men who we felt satisfied were not aware how old they had grown, some of them our particular and intimate friends. In the course of the day we observed one gay youth of fifty-five, with hair and beard well silvered, jump nimbly to his feet and commence dancing as the music of a harp struck up. He supposed that his step was as light and graceful as when he first learned the wiudings of the mazy dance, yet it was plain to be seen that his muscles were stiffened and rheumatic. Then how many men we see with here and there a thread of gray streaking their hair and beards, who in their own opinions, are mere sighing boys—"going to stay here a few days longer," they will tell you, "then go home to have a good time with the girls, (what girls?) then marry and settle down." They have no idea of their age. Their hearts have remained young in cherishing the memory of those youths and maidens, their old companions left behind when they started on their wanderings. Yet physically they are growing old, and must soon go home, or like a singed cat they will not go for what they are really worth.—*Ter. Enterprise.*

The "Old Guard."—We know now of what metal the Army of the Potomac is made. It has, so far in the recent battles, displayed the immobility of solid iron, the elasticity and keenness of tempered steel. When misled, and therefore unfortunate, it hated not a jot of heart and hope, believing that the day of vengeance and of victory, though long postponed, would surely come. What shall be said of it? What words can the nation find worthy of its grand deeds? Upon its victorious eagles the sun of honor shall forever shine. By every hearth which has lost a son in its last magnificent onslaught, sits glory in the dead soldier's place. History shall never tire of reciting its exploits. Poetry shall draw a new inspiration from its valor. Painting and sculpture shall perpetuate the forms and features of its heroes, and show how its fields were won; and the debt of gratitude we owe it, and which no praise can cancel, shall be transmitted from generation to generation, as a sacred heirloom through all coming time. Live the Army of the Potomac! It has no dead. Its fallen are immortal.—*Exchange.*

Very Like a Whale.—The Monterey *Gazette* of July 1st says:

Mr. Osio's boy, while fishing off the end of Jack's wharf, yesterday, fell over and came very near being drowned. It seems that the boy had fastened the line around his waist, and a large shark catching with a sudden jerk on the hook, drew him overboard and was towing him out to sea, when he was rescued by a Portuguese whose name we did not learn. Boys cannot be too careful of themselves when they go a fishing, as sharks are said to be quite numerous in the bay.

Paths to Greatness.—There are but two ways which lead to great aims and achievements—energy and perseverance. Energy is a rare gift—it provokes opposition, hatred and reaction. But perseverance lies within the reach of every one, its power increases with its progress, and it is rarely that it misses its aim. Where perseverance is out of the question I cannot exert protracted influence—I had better not attempt to exert an influence at all, for I should disturb the organic development of affairs, paralyze the natural remedies which they contain, without any guarantee of a more favorable result.

The Hartford *Courant* says that Gen. McClellan, in conversation with a friend a few days since, expressed his opinion that Grant would use up Lee's army and capture Richmond, and that after that was done, we should have but little trouble with the rebel armies.

Eating When Sick.—It is a custom among a certain class of people, when a member of the family is sick, to begin at once to ask: "Now what do you want to eat?" Every one has heard the old story of the man who eat the eighteen dumplings when he was sick. On the occasion when engaged upon the eighteenth, his little son said "Pa give me a piece?" "No, no, my son," replied the father, "go away, pa's sick." When a young man has been surfeited, in season and out of season, until exhausted nature gives way, and a fever is coming on, the good mother is in trouble. She anxiously inquires: "Now, John, what can you eat? you must eat something. People can't live without food." Then comes toast and tea, etc. The stomach is exhausted, and no more needs stimulating or food than the jaded horse needs the whip. What is needed is rest, complete rest. Nine tenths of the acute diseases might be prevented by a few days' starvation, when the first indications appear. I don't mean abstinence in every case, but perhaps a piece of cold bread, with cold water for drink. If such a policy were generally adopted, what ruin would overtake the medical profession?

Weather and Health.—Dr. Logan, of Sacramento, in his last monthly weather report says:—"In the regular progression of the seasons, June has not been marked, this year, by any great variations, as far as the measure of heat is shown in the table, from the constants of the month. A heated term toward the last of the month has had the effect of raising the maximum some four degrees above the average. Nevertheless, there have been several cool, and, in fact, chilly days, attributable to the uncommonly late rains, especially in the surrounding mountains. On one occasion, (the 10th) the rain was accompanied with hail and thunder. These late rains may be regarded as compensatory for the remarkable dryness of the past winter. Coming up to the average, as shown by the table, the rain for June now makes the amount for the rainy season nearly eight inches. With the exception of 1850-'51, when only 4.730 inches fell, the present has proved the driest season of our record. The total amount for 1863-'64 has been 7.780 inches. This is about ten inches less than the average for the preceding eleven years.

Efficacy of Onions.—A writer says: We are often troubled with severe coughs, the results of colds of long standing, which may turn to consumption or premature death. Hard coughs cause sleepless nights by a constant irritation in the throat, and a strong effort to throw off offending matter from the lungs. The remedy I propose has been tried by me, and often recommended to others with good results, which is simply to take into the stomach, before retiring for a night, a piece of raw onion, after chewing. This esculent, in an uncooked state, is very heating, and tends to collect the waters from the lungs and throat, causing immediate relief to the patient. Sliced onion, in a raw state, will collect poison from the air, and also from the human system when taken internally, or externally applied to the arm pits.

Boiling Water.—Anything will cook just as soon in water boiling as slowly as possible as it will in water boiling with the greatest fury. Water under the pressure of the atmosphere and at the level of the sea boils at 212° Fahrenheit, and as long as it is open to the air no fire, however fierce, will heat it a single degree above this temperature. If the vessel be closed with an air tight cover so as to increase the pressure on the surface of the liquid it may be heated to any degree whatever. As the pressure increases with the temperature, the strength of the boiler must be increased in proportion. If the vessel be raised above the surface of the earth, the water will boil at a lower temperature than 212° Fahrenheit, as the pressure of the atmosphere is decreased by raising the vessel.

Getting Alarmed.—The commercial men of England are becoming alarmed. Their efforts to aid the Confederates by assisting them in fitting out piratical vessels have succeeded too well! They have been able, practically, to drive our commerce from the seas, and thus monopolize the carrying trade of the world. But they turn aghast at the very spectacle of their triumph. A vision of Retribution rises before their eyes, converting their joy into fear and their hymn of praise into wails of lamentation. The *consequences* of the guilty part they have been playing—the sure vengeance that will follow in the wake of their crime—force themselves upon them. They suddenly remember that there is a future; that wrong ever reacts against itself, and that the rascally game they have been playing may be played back, and with a success that will annihilate British commerce at a single blow. All at once it occurs to them that in their blind zeal to aid a rebellion against a friendly power, they have been unwittingly establishing a precedent that will place them, for all future time, at the mercy of any power, however feeble, with which their country may be engaged in war.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Msetings, Assessments and Delinqnent Sales.

Comprising the Names of Companies, District or County of Location, Amount of Assessment; Date of Meeting, Delinquent Advertisement and Sale, and the Place of Business of the Corporation if it is not in San Francisco.

Rules for Advertising Assessments on Saturdays.

Levy your Assessments upon any day Except Friday.

Advertise the Assessment Notice on the First Four Saturdays succeeding the day upon which the assessment is levied.

Appoint the day for advertising the Delinquent Sale on the Fifth Saturday succeeding the date of levying the assessment.

Appoint the Day of Sale on the Seventh Saturday succeeding the date of levying the assessment, or on any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

The *Mining and Scientific Press* makes its appearance upon an enlarged sheet. We congratulate our cotemporary on this sign of prosperity, which we need hardly say, is well merited.—*S. F. Argus.*

No. 2—Volume IX.—July 9, 1864.—Department of Agriculture; No Cause for Despondency; Letter from Austin; Gun Cotton vs. Gun Powder; Scientific Explorations; Election of Officers; Brief Mention; Open Sesame Company; Wide West Company; Wall Street Gamblers; The Blue Ledge; Mining Share Market; Iron the Basis of Modern Industry; Quite a Novelty; Gold Productions; Mining Shareholders' Directory; Roasting Silver Ores; Ductility of Gold; Copper Smelting in California; Brain Work and Longevity; Copper Smelting at Detroit; Beecher's Visit to a Kiug; Man's Only Power Over Nature; Mechanical and Patent Department—Labor Saving Machinery, Heavy Forging, New Inventions, Peitsch's Ore Separator, Washing and Pressing Machine, Improved Knapsack, Dodge's Amalgamating Machine; Summary of Mining News—Washoe, Reese River, Esmeralda, Owens River, Humboldt, Arizona, Holcomb Valley, Santa Catalina; Cricket War; Gold Hill Mines; Novel Cooking; Stock Reports and Miscellaneous Items.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Items of Interest.—The total receipts of treasure, from the interior, nad imports, at San Francisco, for the first half of this year is $27,285,759. Total amount exported during the snme time $28,994,711. It will thus be seen tnnt the volume of our currency has been diminished to the extent of $1,707,972 in six moaths. Treasure receipts from the intorior are $2,000,000 more this yenr than last. Last year the enrrency in our State was increased over $2,800,000, while this year it has been decreased to the extent of $1,700,000. Is it n wonder that money is scarce and dear?

Many people profess to think that California is heavily taxed for the support of the United States Government. Such people are in error. The Government pays out more for California than it receives from it. The first six months of this year Government disbursements in this State amounted to $5,586,023. During the same period the revenue it collected here from all sources amounted to $5,533,219. It will thus be seen that Government is expending in this State upwards of $2,000,000 per annual more than it receives from it in the way of revonuo.

The first six months of this year, 371,362 hides were shipped from this Stnte, against 125,561 for the same time last yenr. The increase is mainly duo to the hide crop reaped from cattle that have died from starvation owing to tho drouth.

The exports of wool from this Stnto for the first six months of the present year amounted to 7,289 bales—a thousand bales less than were exported during the snme period in '62.

The exports of California, exclusive of treasnre, average thus far this year $1,150,000 per moath.

The postal service for California costs nhout $350,000 per annum, and it yields a revenue of some $280,000. Loss to tbe Government, say $70,000 a year.—*Sacramento Bee.*

Revolution in Mormondom.—An important revolation is quietly going on in Mormondom. The discovery of gold mines in Utah Territory has induced a large influx of gentiles, under whose moral influence, combined with that of the Federal officors and soldiers nt Salt Lake, the harharous and degrnding institutioa of polygnmy is being driven iato secret corners; the snnctified cutthroats nnd rohbers known as "Daaites" are heing repressed, the power of the Mormon biernrchy is declining, and, ere long, Utah may he purged of her wickedness nnd sensuality, and become a loyal, Christian State. Such harharous iastitutions as slavery nnd polygamy cannot long snrvive the contact of Christian enlightenment. It is but fair to conelude that those twin apostles, Jeff. Davis nnd Brigham Yonng, will terminate their evil missions to the world nt nhout the same time.

Postaoe on Manuscripts.—Newspaper correspondents are remiaded that all manuscripts sent to publishers are entitled to he forwarded at the rate of two cents for four ounces, provided that one corner of the envelope is left open, nnd the word "manuscript" is written on the fnee of the envelope. Authors availing themselves of the provisions of this law will remember, however, that a letter or note inelosed with the manuscript will snbject the whole package to letter postage.

Dinner for Men—Tea for Women!—Says a good ohserver: "You never hear one woman invite another woman out to dinner, any more thaa yon ever hear one man ask another maa to coane and take tea with him. No! it would seem that women's hearts melted and softened over the tea-cup, and that mea's could fly open to each other with the tahle cloth. Who is there to explain it? It takes several knives and forks to dig into a man's secret nature, whereas tbe simple key of the tea caddy will nnlock a woman's seerets at any time."

The unfortnaate man who lost his leg hy the collision of the steamers Yosemite and Washoe has siace died, and Captain Poole has been indicted for manslaughter.

Secretary Stanton, hy regular telegrams, apprises Mrs. Grant, who is now residing in New York, of the state of affairs at the front, nnd of the safety of her husband.

John Geary, of Whitlocks, Mariposa county, went out hunting, lately, and returned with his right hnnd shot completely off. It was done accidentally.

Enlarged.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

The *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

New Volume.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

Mining and Scientific Press.—This well conducted journal has entered upon its ninth volume. It it a sterling periodical, and deserves encouragement.—*Territorial Enterprise.*

A Nugget.—On the 30th ultimo, says the Downieville *Standard*, a chunk of pure gold, valued nt $1,770, was picked up in the tailings of the Hope and Despair Company's claims at the Florida House, four miles below the Mountain House.

The Virginia *Enterprise* opposes the formation of a State Government in Nevada, on the ground that it would be too expensive for a young country of limited resources.

Austin City, in the Reese River District, is progressing. The snm of $131,175 has been expended for permanent huildings in the Second Ward of the city during the last six months.

One lond of rock from the Caahlo Company, Union series, Humholdt, has yieldod a silver hrick weighing 219,53 ozs. It was ou exhibition in Red Bluff.

George W. Madison's dwelling bouso, corner of High and Syeamore streets, Red Bluff, was destroyed by fire ou Snnday last.

Quartz Discovery.—Rieh gold diggings, imbedded in rotton quartz, have been discovered near Grizzly Hill, Nevada county.

Hay is selling at sixty dollars per ton nt Austin, N. T., nnd coming in freely.

In Watsonville, a dispute commenced between two men about twenty dollars' worth of rags. They went to law, and thus far the rags have cost the parties the sum of $1,000, and the caso is still nadecided.

The centenary of American Methodism will occur in 1866. Mensures are taken for the proper observanco of this most importnnt event.

Chew Your Food.—Johannee Baptisto Jetzer, who resided at Freach Lead, near Grass Valley, was choked to death on Tuesday of last week hy a piece of beefsteak sticking in his throat.

A magazine called the "Fisherman's Magaziae," has been estnblished in London, n coatemporary says:—"The first number is well baited nnd takes well."

Thirteen thoasand dollars in gold has beea found on hoard the captured blockade runner Minnie, now at Boston. It was reported whea the Greyhound was taken she also had a large amount of specie on hoard. But the specie and her captain botb disappeared as soon as she arrived in port.

From an nrticle which recently appeared reviewing the Annual Report of the London Society for propagating Christianity among the Jews, it appears that it costs about $20,000 to convert a genuine Hebrew to the Christian faith.

Tax on Matches.—Three match manufactories in Bostoa, owned hy one man, consume twenty cords of wood and five hundred pounds of brimstone per day. Under the new tax of one cent per box, the owner pays to the Governmeut $400 a day in taxes.

Mrs. Drummond, of Sacramento, the lady who persisted in keepiag the Stars aad Stripes afloat over her door on the 4th of July, is a eousia of Gen. Rosecrans.

Some idea of the valne of the manufacture of small wares may be formed from the fact that one firm in Taunton, Mass., turns out yearly 1,500 tuns of tacks.

The First Gun.—The Esmeralda *Union* claims that the first cannon made in this Territory was cast at Aurora, July 3d, 1863, and has done good service ever sinee.

The Virginia *Enterprise* says freights are now arriving in that city from Califoraia at the remarkahly low price of tbree cents per pound.

A "right" whale, measuring over eighty feet in length, floated ashore at the Pajaro landing, in tbe neighborhood of Watsonville, last week.

The railroad war in Placer county was terminated on Tuesday, hy an order from the Supreme Court, dissolving the injuaction to prevent the parties from removing the track.

John P. Hale, it is said, will suceeed the late J. R. Giddings as United States Consul General to Canada. The salary is $4,000 per aunum, with perquisites.

Dr. McMurtry, one of tho delegates to the late Baltimore Natioual Convention, writes to a friend, that Congress is not so respectable a looking hody of men as a California Legislature! People, women included, do aot dress as well as the people of San Francisco.

Just across the Potomac, in full view from the Capital, lies Lee's great plantation. This has heen seized hy the Governmeat and sold for taxes, and was bought in by the Government at $26,000.

Fremont's Mariposa Claim.—The Mariposa Free *Press* says that sixty or seventy hands are working oa the quartz vein of the Mariposa Fremoat estate, and that a new and large mill is heiag erected.

Birds and their Songs.

From the earliest time birds have excited the admiration and attention of man. The delightful Spriag season would be mournful without them, just as Winter is rendered more gloomy aud desolate by their departure. What a tender picture is the very nest of a bird! That little downy bed, hidden among the green houghs, and watched hy careful affection, while songs of love flont aroand it. And then the bird itself, what a beautiful, aerial, light form. Add to this its splendid colering and plnmage, the dots of changing lues, the blue, green and gold, with the pure, shining freshness of their white nnd black feathers.

We are usually attracted hy the wonderful power of flying, by which the feathery race is lifted far beyond the sphere of every day life. Their majestie sailing aad circling, the happy, graceful hovering and floating in the air, their soaring aud falling,

"Now below, where the stream is gushing,
Now on high, where the clouds are rushing."

We pass over their migrations and wonderful instinct to mention their song. Seng is the hird's mystery, and its different degrees are almost endless; some thiak they understand these sounds. What a range of tones hetween the cawing of the ravea and the voice of the nightingalo or the mecking-hird! The shrill cry of the osprey is terrihle as he swoops upon his prey, but how teader and alluring is the cooing of a turtle-dove! Wonderful are the accents of a single song bird's voiee, now rapidly prattling, now drawn out long and soft, then fine with sudden stops, or again shrill and disjointed, expressiag, in fact, the feelings of conteut or sorrow, the tender affection of love or the rage of jealousy.

The Spring is the season when they make the whole country one orehestra. While the morniag is yet eold, there are only a few chirps, hut enough music ia them to make one desire their repetition. As the day gets warmer the air is filled with cheerful memories, nad you feel more joyful, and more lifting up of the heart thau when any other musie meets your ear. Many have amused themselve ia making imaginary scales of bird's notes. This of course is a difficult matter, as no two persons can be exactly of the same ear and opinion on the subject.

The language of hirds is a tongue language, hence they can sing or whistle, and it is aanong the most perfect of the lower or animal creation. King Solomoa is said to have heen versed in the language of birds. It is related of Benedict IX. that he understood the voices of hirds. In former ages it was helieved that their language could be learned hy diligent study. Some fairy tales meution one who studied for three years the harking of dogs, the songs of hirds, and what the frogs say whea they croak. Many persons, later, have studied for honors in this hraach of philology. Toward the middle of the last eentury a German scholar, investigated the goose language, intending to write a *Goose Lexicon*. Another, as late as 1837, in an inaugural dissertation, gives some examples of the animal laaguage, with its interpretation, aud amoag others a conversation of cocks and hens.

Steamboat Silver Mining Company, Star District, Humboldt Co., Nevada Territory.

Notice.—There are delinquent upon the following described stock, on account of assessment levied on the 28th day of May, 1864, the amount set opposite the name of the following shareholder:

Name.	No. Certificate.	No. Shares.	Amount.
E D Blair	22	20	$10 00

And in accordance with law, and an order of the Board of Trustees, made on the 28th day of May, 1864, so many Shares of said stock as may be necessary, will be sold at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on the 2d day of August, 1864, at the hour of 10 o'clock A. M. of said day, to pay said delinquent Assessment thereon, together with costs of Advertising and expenses of Sale. S. O. PUTMAN, Secretary.

Office, N. E. cor. Jackson & Front streets, up stairs, San Francisco. 3-3t

Illinois Gold and Silver Mining Company, Smoky Valley District, Lander County, N. T.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 11th day of July, 1864, an assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States gold coin, to the Secretary, or to Ralph Brown, Superintendent, Carson City, Lander County, N. T.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 2d day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

M. A. WHEELER, Secretary.

Office, No. 1 and 2, Government House, corner Sansome and Washington streets. 3-4t

Caution.—All persons are cautioned against purchasing Certificates No. 43 for 20 shares, and No. 435 for 3 shares, (unassessable) in the Great Consolidated Boise River Gold and Silver Mining Company, the same having been fraudulently obtained from the subscriber. Transfer of same has been stopped on the books of the company.

1 J. W. REED.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Tellurium Gold and Silver Mining Company, Pine Grove District, Amador County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 13th day of July, 1864, an assessment (No. 7) of $1 per share was levied upon the Capital Stock of said company, payable immediately, in gold coin of the United States of America, to the Secretary, at the office of the company, 627 Clay street, in the city of San Francisco, California, or to J. H. Bradley, Esq., at Pine Grove, Amador county, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. WM. H. MARTIN, Secretary.

Office, 627 Clay street, San Francisco, Cal. 3-4t

Oxford Beta Tunnel and Mining Company, Esmeralda District, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of July, 1864, an Assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable on the 12th day of July, 1864, in United States gold coin, to the Secretary, at his office, or to Thomas Lytle, Superintendent, at Aurora, N. T.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. GEO. H. PECK, Secretary.

Office, Corner Broadway and Sansome streets, San Francisco. 3-4t

Mosquito Quartz Mining Company, Mosquito Gulch, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of May, 1864, an Assessment of five dollars per share was levied, payable in United States gold coin, and that at a meeting of the Board of Trustees of said company, held on the 11th day of July, 1864, it was ordered that said assessment should be payable on the 13 day of August, 1864, to the Secretary, at the office of the Company, No. 433 Montgomery street, city and county of San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 29th day of August, 1864, to pay the delinquent Assessment, together with the costs of Advertising and expenses of the sale. By order of the Board of Trustees.

EM. FENARD, Secretary.

Office, 433 Montgomery street, in the city and county of San Francisco. 3 4t

Animas Silver Mining Company, Ventanas, District of San Dimas, State of Durango, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 14th day of July, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, at the office of the company, No. 623 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEORGE A. HILL, Secretary.

Office, No. 623 Montgomery street, San Francisco, California. 3-4t

Wellington Gold and Silver Mining Company, Wellington Ledge No. 2, Santa Catalina Island.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of July, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable on the 16th day of July, 1864, in United States gold coin, to the Secretary, at his office, No. 605 Sacramento street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Wednesday, the 17th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay said delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. O. CARDNER, Secretary,

Office, 605, Sacramento Street, San Francisco.

Postponement.—The advertisement of delinquent stock on the above assessment, is postponed until August 20th, 1864, and the sale thereof is postponed until September 3d, 1864. By order of the Board of Trustees.

3-5t S. O. CARDNER, Secretary.

Wide West Copper Mining Company, Copper Canon District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 14th day of July, 1864, an Assessment of 20 cents per share was levied upon the Capital Stock of said Company, payable immediately, in U. S. gold coin, to the Secretary, or to J. M. Pike, Superintendent, at Copperopolis.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent Assessment, together with the costs of Advertising and expenses of the sale. By order of the Board of Trustees.

M. O. ELMORE, Secretary.

Office, 621 Clay Street, San Francisco. 3-4t

Mt. Zion Gold, Silver and Copper Mining Company, Clayton District, Contra Costa County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 9th day of July, 1864, an Assessment (No. 13) of $1 per share was levied upon the capital stock of said Company, payable immediately, in United States currency, to the Secretary, at his office in San Francisco.

Any stock upon which said assessment shall remain unpaid on the 11th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. A. G. WOOD, Secretary.

Office, 240 Montgomery street, southeast corner of Pine street, San Francisco. 3-4t

Mechanical and Patent Department.

INVENTORS AND INVENTIONS.

Perhaps the most usefnl, and certainly the poorest paid class of persons, taken as a whole, are the inventors of almost any community. These men of toil and mental anxiety, who spend weary days nnd tronhled nights, working and dreaming over some half developed idea, are constantly sowing that others may reap. It is seldom that an inventor who originates an idea, reaps anything like a tithe of the profit thnt grows out of it. Often it occurs that an invention is no sooner made puhlic, than some secoud person takes up the idea, and so changes and modifies, perhaps improves it, by hringing a fresh mind to hear upon it, as to entirely deprive the origiual projector of every benefit therefrom. Yet the actual lahor and ingenuity reqnired in the original projector, exceeds hy many times that of the modificator. It still oftener happens that au inventor has expended all his means in bringing out his discovery, or another lacks the facilities for properly introducing it to use until the term of his patent has expired, when it becomes public property; or perhaps he seeks assistance from some capitalist, who appropriates to himself the liou's share, leaving but little or nothing to tbe poor inventor. The ignorance, or what is worse, the wickedness of patent solicitors, oftener intervenes to deprive the inventor of his rights, by an improper presentation of his claims, leaving open a door hy which another may come in and carry off all that is valuable of the prize. Cases have come to our knowledge where the evidence has been strong to the effect that such things have heen done by solicitors, merely to multiply business. They have sacrificed the interests of their clients for the sake of the paltry fee to he derived from some secoud party, who may take advantage of an intentional oversight.

In addition to all this, there is in every community a class of grnmblers who are continually fiuding fault because, as they say, "we are be-patented from the cradle to the grave—morning, noon and night, we are be-patented with medicines, garments, tools, edihles, drinkables, etc. We are rocked in a patent cradle, buried in a patent coffin, and perhaps the last solemn services consist mainly of a patent sermon." There are many who seriously begin to inquire whether all this patenting is necessary or desirahle, or indeed whether we need any patent laws at all—whether the entire system onght not to be abolished, the patent office turned into a workshop, and inventors deprived of every opportunity for securiug any special benefit from tbe results of their study and ingenuity. Such men are opposed to all labor-saving machinery, and would have us spin and weave as Eve spun and wove, and delve as Adam delved.

It is a consolation, however, to reflect that this class of grumblers is fast dying out, and that the indispensable services of the inventor are becoming more and more appreciated. The fact is becoming generally acknowledged that invention and civilization go hand in hand together. Take away our inventions—onr patented lahor-saving machinery, and what would be our condition? We should he but a little in advance of our digger neighbors in grinding wheat and corn. Onr rivers would he covered with an innumerahle quantity of "dug-outs," or tuh-shaped sailers but little hetter. The stitch, stitch, stitcb, of onr wives and mothers, would harely suffice to cover our nakedness witb the simplest attainahle garb; the paper on which we write and print would be so coarse and costly as to be at once unserviceable and almost unattainable; while the scarcity of books and newspapers would reduce us to a state of harbarous ignorance which would preclude any possihility of physical or social advance.

What is it that has so suddenly, given this new world such a place among the nations of the earth? Our inventors. Who has filled onr country with manufactories, covered the lnnd with a network of iron roads, and our rivers with floating palaces? Who has huilt our bridges and constructed our docks and tunnels? Who has made this nation what she has tbis very year proved herself to be—the master power on this plan<t? Wbo but our inventors, who have taken the lead in mechanics, architecture and the arts? Wipe out our inventions, and where would we be? No! all honor and snre protection to our inventors. Let tne work of invention go on, on, on. Let our patent laws remain as the key stone to onr success and progress, and "*excelsior*" ring out as the animatiug word to energize the efforts of all good and useful men.

THE LENOIR GAS ENGINE.

We have several times noticed the progress which is heing made toward the introduction into practical use of this new motive power in the French metropolis, and from what we can learn, it seems thus far to he a complete success. It is now in operatiou in a great number of workshops in Paris, where it appears to he doing satisfactory service, generally running from five to twenty-five horse power.

The motive power of this machine is gas—the same which is distributed all over the city, and into our dwellings and stores for the purpose of giving light. The power is created or brought into exercise, by an electric spark which inflames tbe gas when mixed with atmospheric air iu tne hody of the cylinder.

The engine consists of a cylinder laid horizoutally on a cast-iron frame, and a piston, which is moved in the cylinder, and which hy a connectiug rod, transmits tbc motion to the horizoutal shaft ou which the fly-wheel and motive pulley are fixed precisely as in a steam-engine. The gas is introduced through a pipe from a regulating reservoir, which regulates the flow of gas, and prevents any sudden jerking in the gas-pipe.

The electric current is produced by a suitable hattery, conveniently located, aud is conducted, by means of insulated wires, iuto each end of the cylinder. It is cut off by an arrangement worked by the piston rod similiar to the "cut-off" in a steam engine. The burned gas, after having performed its functions in the machine, escapes hy the means of a valve, through a pipe. Water is also conducted into the cylinder, for the purpose of cooling the same, hy a pipe, and discharged by means of an escape-valve. When it is desired to set the machine in motion all that is required is to turu the cock of the gas-entrance, start the fly-wheel a little, until the first spark is communicated to the gas, and the machine is in operation. It is propelled by the expansion of air, dilated by the explosion of the gas.

This machine is exciting much attention in France, Germany and England. One of the most prominent Houses in England, Messrs. Barrett, Exall & Andrews, have uudertaken its introductiou into that country. A small engine of some three horse power has also been forwarded to New York, where at last accounts it was being put up.

The advantages of this engine, in many localities and under many circumstances, are maifold. It requires no fire and makes no smoke or dirt, and but little noise. There are no boilers to he filled and to be constantly tried, as in the steam engine, and it cannot explode; the rates of insurance are not affected hy its use, and it is absolutely free from danger of any kind. It is extremely simple in constructiou and can be placed under the control of any person of ordinary intelligence.

Witli regard to its economy, we are not thoroughly advised, but our impression, derivahle from the imperfect knowledge before us, is that under ordinary circumstances, it can be run from one-fifth to one third less than the ordiuary steam engiue. We presume that a cheaper quality of gas can he used than that ordinarily employed for lighting dwellings, which will still further rednce the cost. Its introduction, should it come into anything like general use, will doubtless stimulate invention in the way of producing portable gas generating machines, for this especial purpose. Mnch will undoubtedly be done in this direction, under the powerful stimulus wbich tbis leading iuvention may induce.

The Rivot Process—A Patent Granted.—In the weekly report of patents granted, under date of May 31st, a patent for treating auriferous and argentiferous ores, was granted to Louis E. Rivot, of Paris, France, assignor to Jaques Gaillardon, of this city. The patentee claims:

First—The roasting, by means of superheated steam, of auriferous and argentiferous ores when combined or mixed with pyrites of iron or copper, in the manner set forth in his specifications.

Second—He claims the general arrangement and construction of reverheratory furnaces adapted for the roasting of ores hy means of steam superheated, as described in his specifications.

Third—He claims the process of amalgamation without reagents, whereby the roasting of ores may he rendered practical and economical, when conducted after the manner described.

Improved Hoop Fastening.—The usnal method of fastening wooden harrel hoops, hy notching, is well known to most persons. The preparation of this fastening requires considerable lahor, and when once arranged, the hoop cannot be materially varied in size. Mr. H. W. Catlin, of Burlington, Vermont, has recently patented a very simple arrangement for securing hoops, something after the manner of an ordinary buckle, hut without teetb. Tbis fasteniug has simply a cross-bar, and is readily punched, at one operation, out of sheet iron.—The ends of the hoops are easily pushed into the clasp, hut cannot he withdrawn when the hoop is distended, in consequence of the "hite" which holds it. It can he used for either iron or wood, and is much neater and stronger than the ordinary manner of fasteniug, and far less liable to slip or break. Thc hoop moreover, cau he varied in size the smallest appreciable fraction of an inch, if desired.

A New Journal Box.—Mr. F. P. Peregoy of Indian Valley, Plumas county, has made application through the agency connected with this office, for letters patent for an improved journal hox, which appears to comprise several advantages not heretofore employed. This journal box is coustructed with moveable guide blocks, worked by set screws, in which are properly secured anti-friction rollers, and the whole neatly and securely combined in a snitahle frame or box, which easily slides apart, opening from the center. These hoxes may be readily used for securing spindle shafts, under water, for line shafting, and shafts of all descriptions, for stamp guides, etc. They have been for some time in use in connection with the heavy shafting of a qnartz mill in Indian Valley, having beeu put up tbere by the inventor to give them a fair working test.

Invention—Imitation.—Inventors should he careful to secure by patent any improvement which they may make, if worth a patent fee, as there is a certain class of manufacturers who do not possess hrains sufficient to conceive evcu an original idea, but are overstocked with the gift of imitation, who watch closely every opportunity to filch the inventions of others, and not unfrequently claim them as their own origin. Nothing short of closed doors or the Patent Office will prove a harrier to this description of pilfering.

Frictional Hoisting Gear.—Mr. James Spiers is introdncing into the Washoe mines what he claims to be some excellent improvements in hoisting in frictional gearing and hoisting apparatus. The editor of the Territorial *Enterprise* has examined some of his plans and speaks highly of them, and thinks they are well worthy the attention of miners and mill men.

Jesse Reed, of Marshfield, Mass, invented the heading process in nail machines, which has become so universally adopted that we could not now go back to the old hand system of heading. He was also the inventor of the Revolving-top Pump. Jesse Reed has taken out some forty patents in all, the greater part of them heing inventions to save labor. All labor-saving machines are a benefit to the world at large, aud the inventor is a public benefactor.

Value of Evening Hours to Mechanics.

How few mechanics realize the value of their leisure evening hours. How seldom is the fact brought to mind that these evening hours have furnished the precious moments which have laid the fonndation for fame and fortune to many, whose names rank high on the roll of honor, in the moral, industrial and scientific world? Passing over the long list of names of our owu countrymen who have come up from scenes of poverty and toil, to occnpy important places of honor and trust, we clip the following, of honorable mention, among our cousins across the water, from an English periodical. Let every mechanic, aud every son of toil, in whatever department of industry his lot may he cast, take courage and feel assured that he, too, can arrive at a greater or less degree of eminence, in proportion as he devotes his leisure moments to acquiring useful information. The har-room, the grocery, the hilliard or other saloon and the street corner have robbed many a young man of the fortune and the fame that was his birthright, if he had not squandered it away for a mess of pottage. Read the following facts:—

One of the best editors the Westminster *Review* could ever boast, and one of the most brilliant writers of the passing hour, was a cooper in Aberdeen. One of the editors of a Loudon Daily Journal was a baker in Elgin; perhaps the best reporter of the London *Times* was a weaver in Edinburg; the Editor of the *Witness* was a stone mason. One of the ablest ministers in London was a blacksmith in Dundee; another was a watchmaker in Banff; the late Dr. Milne, of China, was a herd-boy in Rhynie; the Principal of the London Missionary Society's College at Hong Kong, was a saddler in Huntly; and one of the best Missionaries that ever went to India was a tailor in Keitb. The leading machinist on the London snd Birmingham Railway, with £700 a year, was a mechauic, in Glasgow; and perhaps the very richest iron founder in England was a workiugman in Moray. Sir James Clark, her Majesty's physician, was a druggist in Banff. Joseph Hume was a sailor first, and tben a laborer at the pestle and mortar, in Montrose; Mr. McGregor, the member from Glasgow, was a poor hoy in Ross-shire; James Wilson, the member from Wesbnry, was a ploughman in Haddington, and Arthur Anderson, the member for Oakney, earned his bread by the sweat of his brow in the Ultima Thnle.

Value of Skilful Stoking or Firing.—The following is from an article on Smoke Consuming Apparatus, in tho 5a Livaraison of 1863, *Annales des Mines:*

"The Coal Mining Company of Ronchamp, near Mulhouse, in order that its coal may he properly appreciated hy the consumers, has established a school for firemen. A person skilled in the art of firing goes from place to place for the purpose of instructing tbe local firemen in the proper mode of hurning coal. This instructor has secured in several estnhlishments a saving of 25 to 30 per cent, without making any modification in the furnace in which the coal is consumed."

Every one who has had any considerable experience in the general management of Engines must have noticed the great differeuce wbich exists among firemen, in their manipulation and management of fuel under their hoilers. Our own experience in this matter is certainly corroborative of the point above made, and we long ago scouted the fact that any common laborer would answer for a fireman. We believe there is fully 25 per cent to be saved by skillful over unskillful firing. A skillful fireman—one who has heen tanght his business, or who has acquired a proficiency tberein, hy long and carefnl experience, will fully save his wages over one who lacks the proper experience and knowledge required in his business. A teacher for firemen is not out of place, in an economical point of view.

New Shaking Table.—Charles A. Stetefeldt, of New York City, has secured a patent for a new invention for separnting ores, which consists of a shaking-tahle, provided with two or more rotating heds, arranged one above the other, in such n manner that by their action tbc pnlverized ore, running down over them, is separated antomatically hy the action of the machine, according to the different specific gravities of the constituents, and that the separation can be continued to any desired degree simply hy increasing the number of rotating beds.

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

HUMBOLDT.

The Humboldt *Register* says that many companies are holding back to learn the result of the extensive operations now going on at the Sheba Mine. If that experiment is satisfactory everything will go on swimingly. This company proposes to run one of its batteries on custom work, when it is offered in lots of not less than 20 tons each. We condense from the *Register* as follows:

Inskip is attracting much attention. During the last week in June the company realized from ten tons of ore, which was taken from the mine by two men, twelve bricks, worth $2,325. This pays all expenses, all debts of the company, all cost of incorporation, and almost pays the one dollar per share assessment. This ore was from near the out croppings.

The Sheba mine is reported in good condition, and taking out quantities of rich mineral. The mill is going up rapidly, and is nearly finished. It is of 40-horse power, with two stamps iron batteries, of six stamps each, six Wheeler pans, and two settlers. It is the intention to run half this force, if the custom offers, on custom work—the other on Sheba ore. The company proposes working its second and third class ores, shipping the first class, as usual to Europe.

The Steamboat Company have good prospects. At the end of their one hundred and fifty feet tunnel a shaft of twenty-six feet has been sunk, and at the bottom, about seventy-six feet from the surface, the ledge still shows a fine vein of ore, varying from two to four feet in width. A small lot of ore, not carefully selected, was sent to San Francisco and worked. It went two hundred dollars to the ton. Twenty tons will be worked soon, at the Sheba mill; when a better yield is anticipated.

The Detroit Ledge, which has been prospected 35 feet down, is considererably broken. Some of the ore has worked $500 to the ton.

The California Mine has a shaft already 80 feet down, and progressing at the rate of 12 to 14 feet per week. This ledge is also broken.

The De Soto has just completed an air shaft 94 feet in depth, by which means the workmen have pure air. It takes but a short time for the smoke of a blast to escape. The mine is now well ventilated.

The California.—Wheeler and Folk, running this mine, have the shaft eighty feet down, and are making from twelve to fourteen feet a week. Ledge considerably broken up, but east wall clear and going regularly down.

The Caudle Company recently sent to Red Bluff, for exhibition to stockholders there, a small bar, product of ore from that ledge—value, $239.

Placer Diggings in Star Creek are prospecting well, though not yet down to bed-rock. Prospects as high as ten to twenty-five cents to the pan have been taken.

Bullion Shipment for the month of June, through Wells, Fargo & Co., amounted to 600 pounds. A large amount besides has gone by private hands, the sum of which we have no means of knowing.

The Humboldt world has recently been agog, over the discoveries of diggings in Antelope Cañon, reputed rich in gold dust. Many parties have been over to prospect and see what could be got. Some are on their second trip thither.

A prospecting party discovered, one day last week, near the Chrysopolis, in Sierra District, a narrow ledge—but 12 inches—of solid ore, richer than the Gem, which is as rich as ore usually gets to be.

WASHOE.

The Gould & Curry Tailings.—The Gould & Curry company have made somewhat extensive and quite expensive arrangements to save and work their tailings. It is doubted by many practical mill men whether these efforts can be made to pay. The Gold Hill *News*, in alluding to the matter, says:—

The arrangements for saving the tailings are not yet fully completed, and their value or efficiency has not yet been fairly tested. The company has expended a great deal of money in getting ready to save the tailings, but we doubt whether the investment will be a profitable one. When a large rich company attempts to carry on such work as this, it usually expends more money than it saves. In England and Wales the tailings from the mills are generally worked for the waste metallic sulphurets and pyrites, but it is done by small companies that employ children to do most of the work; and mill, and mining companies seldom or never interfere. Two or three different parties have within the past six months been washing tailings in Gold Cañon with not very encouraging results, and this was done by men who had worked tailings in other places, and were in this place working for themselves, and may therefore be expected to have done it as cheaply, and as profitably as possible. If they could not make it pay, we think the Gould & Curry company have a small prospect of success. However, nothing but a fair trial can determine the question.

The Combined Effort, after running their shaft to the depth of 260 feet, and timbering thoroughly, have commenced a drift for the ledge which they hope to strike rich at this level.

The Midas Company has recently commenced a drift, and is now running to its ledge. Its shaft is 400 feet deep. There was no water struck in the shaft, and there has been none struck in the drift yet, but when the ledge is reached it is expected that water will be found. The company is going on with its work very rapidly, and is making the most out of the favorable circumstances under which it is at present laboring.

The Yellow Jacket has got down 317 feet, which is about 20 feet below water level. At that depth it struck a stream of water about two and a half inches in diameter. After this was struck, work at sinking was suspended, and the water allowed to rise to its level. The company is now running a drift to connect with its mine, and will soon have connections made and be working its ledge through its shaft as well as through its incline. The rock of the company grows richer the deeper it is taken out. When the company gets its pump in and works its ledge below water level, it is thought the mine will be found inferior to none in the district.

The Original Hawkeye has struck what appears to be excellent rock. It is described of the white and blue variety such as is found in most of the best mines of Washoe. The extent of the deposit had not been proven at last accounts.

The Jewett & Shepard company is busy erecting machinery on its claim. The hoisting frame is partly completed, and the machinery, engine, etc., is mostly on the ground. It will be ready for operation in a short time.

The Mexican Company are still taking out exceedingly rich ore—as good as ever was hoisted from the claim.

REESE RIVER.

The Silver Ores of Reese River.—The Nye county *News* says:—"The silver ores of this region of country are comparatively free from several of the more troublesome base metals, such as arsenic, antimony, &c. They also contain but a moderate amount of lead, though some of them are pretty strongly impregnated with iron and copper. Most of them will evidently require roasting, for which purpose we have, fortunately, ample supplies of fuel conveniently at hand, and of a character well suited to this use. Besides this, we have here the clays required for making fire-bricks, crucibles, &c., and mountains of a stone that, while it is easily cut and quarried, resists heat equal to almost any other material. Furnaces made of it answer admirably, and even smelting pots have thus far stood the usual tests.

Furnaces Started.—The Reese River *Reveille*, of June 8th, says that the roasting furnaces connected with the California and Oregon mills, had just been completed, and that roasting operations had already been commenced. Both furnaces were found to work admirably. Two furnaces had been constructed at the Oregon mill, and the foundations for two others were already in a state of forwardness.

To be Incorporated in New York.—The Reese River *Reveille* says that a large number of claims are being fixed up to be sent to New York, for the purpose of being incorporated there under the mining laws of that State, and from the character of the gentlemen in whose hands they are placed, there is little doubt but that they will all be successful.

Fire Stone.—An article of this character has lately been discovered in Esmeralda county. It has the weight of fire brick, and by an experiment tried in a furnace of an iron foundry, it is proved to be as good or superior to the best fire brick. In color this stone is very white, with delicately tinted purple veins.

A New and Promising Mine.—The Nye County *News* speaks of a new and promising mine, in the neighborhood of Ione City, and known as the Mammoth, from which specimen rock of extraordinary richness is being taken. The owners have projected a scale of operations for the exploration of this mine surpassing any other mining scheme yet devised in the district, it being not more remarkable for its magnitude, than the system and engineering skill displayed in its design and methods of operation. Beautiful and extensive drawings have been executed, fully illustrating the plan of these works, and exhibiting the geological features of the mine, and the shafts, adits, tunnels and other proposed approaches. The proprietors, with a view to raising a fund for its complete development, have determined to each part with a small interest for effecting that purpose.

Reese River Bullion.—A lot of four bars of silver bullion, says the *Reveille*, weighing 210 pounds, and worth $3,536 92 has just been sent in from Austin. Furnaces for the proper working of the Reese River ores are being erected, and as soon as a sufficient number of these are in operation, we may expect to see a vast increase in the shipments of bullion from this much-abused region. The charge for working the ores when properly roasted will be $150 per ton, but owners of ore will get more than twice the amount of bullion that their ores are at present yielding.

Eureka Mill.—This mill situated at Big Creek, is now in splendid order, and running every day, under the superintendence of Major James M. Dawley, and is now crushing rock for the Whitlatch company. The Whitlatch sent off $1,800 of splendid bullion, on the 7th inst., with good prospects of a large increase in a short time.

The Stonewall Jackson claim sent ten tons of ore to Austin, for reduction, on Thursday of last week. A large quantity of first class ore is now being raised from the claim, which it is reported, is daily growing better as the shaft goes down. The entire vein now pays, from case to case, the ore being diffused throughout.

Rich Diggings in Yuba.—The Marysville *Appeal* has the annexed notice of a rich claim in Yuba county, to which we have heretofore made frequent reference:

We learn from a reliable source that Simpson & Pierce, owners of the Blue Gravel Mining Company, near Smartsville, after a run of twenty-seven days, have just cleaned up from forty boxes, at the head of the flume, the nice little sum of near $27,000. This is the fourth clean up since the 1st of March. The first being on the 15th of March, $14,400, from thirty-six boxes; next, from the most of the flume, $26,700. Then a short time after, a few boxes at the lower end, near $6,000; making in all since and including the 15th of March clean up, near $70,000.

Manufacturing Interests.—Notwithstanding we are in the midst of a great civil war, there has not been any time during the present century when all kinds of manufacturing (excepting cotton) has been, seemingly, more prosperous than at the present. Go where we will, we find every manufactory filled with orders, and, in most cases, like ourselves, short of help—especially machinists—which, in connection with the high prices of all kinds of material and labor, tend to shorten the supply, and, consequently, increase the demand.

This great demand is the real cause of the mechanical prosperity of the country. There is no country in the world where the power to produce wealth is superior to this; we have the native inventive genius, and our labor-saving inventions are so profuse that they can hardly be enumerated.

A. T. Dewey, a native of Westfield, who learned to set type of Elijah Porter at the *News Letter* Office about fourteen years ago, is now a publisher of the Mining and Scientific Press, in San Francisco, California. He sold his old paper, the *Mountain Messenger*, to his brother, Edw. M. Dewey, who is now publishing it at Downeiville, Sierra county, California. We wish the Dewey brothers abundant success in the "land of gold."

The above is from an old partner, P. L. Buell, Esq., of the Westfield, Mass., *News Letter*, who has anchored safe and sound with the old craft, which we are happy to see is still in a booming condition. His notice is a pleasant reminder of past times and gone-by associations.

Ophir Improvements.—The Ophir Company have moved their heavy hoisting engine and machinery from their old building to that of the Central, a few rods further south, where it is being set up to hoist through the deep shaft of the latter named company. The mason work about the boilers is already finished, the engine put in place, and in a few days the whole of the machinery will be ready for operation.

The squaws at Virginia city are engaged in selling hoquets made of wild flowers, interspersed with a sprinkling of sage brush and cactus.

The imports of foreign dry goods at the port of New York for the month of May have been nearly double the total for the corresponding month of last year.

Iron Ore in Reese River.

The Nye county *News* says:—"Iron ores in immense quantities, and of an excellent quality, have been met with at several spots, and in some cases so near to wood and water that there will be sufficient inducements for capitalists to embark in the business of manufacturing the article, at least to the extent of meeting the demand for stamp-shoes, battery plates, amalgamators, and many other things required about a quartz mill. A party fully conversant with the subject, is of opinion that even railroad iron could be made here to advantage, and even goes so far as to report favorably to his principals in San Francisco on the project of immediately erecting works for the manufacture of such articles as are most largely in use and most frequently require replacing in quartz mills, and ultimately of railroad iron. This gentleman shows by the most conclusive proofs that iron could be made here at a cost of hardly more than half the freight paid for transporting it. From the large consumption that must soon spring up in Central Nevada, it is fully apparent that we shall be able to count forges, furnaces and foundries, amongst our industrial establishments at an early day."

The *News* further adds:—"Mr. Tustin, representing a California company, has recently located a large bed or vein of iron ore, near West Canyon, in Mammoth District, about a mile below Craig and McKeehnn's station, on the Wellington road. The ore is the kind known as magnetic, and so pure that it is believed that common castings, such as stamp-shoes, pans, etc., can be made directly from the ore. In close proximity to the mine, is an inexhaustible supply of fuel and water, which greatly enhance its value."

Indigenous Flax.—The editor of the Reese River *Reveille* has seen several bunches of flax that grew of its own accord in the Ravenswood District. The stalks were upwards of three feet in length, of very fine and strong fiber, and grew in bunches of from forty to fifty on a single root. It is said there is a great deal of it growing in that region, and as it grows so well and in such quantities, there is a possibility that a good business might be established in gathering and manufacturing of it into bale and windlass-rope, etc.

Wild Plums are said to grow with great luxuriance in the Reese River country. They are unusually abundant this season. The editor of the *Reveille* reports having counted from one hundred and forty to one hundred and seventy-five plums upon a single stem. The stems are small, not larger than a riding whip, and there are sometimes as many as thirty or forty of them on a bush. At these figures, should the fruit ripen well, the supply will be almost unlimited.

Soldering Water-Pipes—A Convenient Method.—When it is necessary to solder full water-pipes, that are broken off where it is inconvenient to turn off the water, let the plumber plug up both ends; then surround the two portions of pipe near the fracture with ice and salt. In a few minutes the water within the pipe will be frozen solid. The plugs may now be withdrawn, the fracture repaired, the salt and ice removed, and the water soon commences its flow again.

The Central Railway Company announce their intention to erect a spacious depot, with offices for a staff of clerks, and waiting rooms for passengers, on Taylor street, between Turk and Eddy, near the junction of the City Front, Potrero Nuevo and Lone Mountain roads.

A Very Ancient Printer.—Col. Robert Carr, of Philadelphia, read the farewell address, on the occasion of Washington's birthday celebration in that city last February. Col. C. was an apprentice of Benjamin Franklin, and is nearly 90 years of age.

A negro, named Collins, on Wednesday last week, was driving a six-horse team along the old Carson road. He fell asleep and the team ran off the grade, killing the driver and three of the horses.

Professor Silliman arrived at Los Angeles on the 4th ult. by the Overland route, and left the next morning for Santa Catalina Island.

Diamonds.—Two million dollars' worth of diamonds were imported into the United States the last year. So says a foreign writer who has been reading on the subject.

The next session of the University of the Pacific, at Santa Clara, will commence on the 21st instant.

Gold in Australia.—The amount of Gold received at Siduey, N. S. W., Mint, during the year 1863, was a fraction over $2,000,000.

San Francisco:
Saturday Morning, July 16, 1864.

The Washoe Coal Company, located on the Truckee river, says the *Piute*, have sunk a shaft on their location, running through several strata of coal, and at a depth of sixty-nine feet struck what is termed by colliers, "coal water," which prevents the advance of further work by ordinary means. They have consequently obtained the use of a boring machine, with which they will sink a well, from the bottom of their shaft, six inches in diameter. If the company, as is predicted by old coal miners they will do, strike their ledge in the well, a large steam engine will immediately be erected for the purpose of more rapidly developing their claim, which it is hoped and believed by many is destined to work a great revolution in the material interests of the Territory. One of the greatest drawbacks to the development of the mining interests has been a scarcity of fuel. If the lately discovered districts will, as is alleged, furnish an unlimited supply of fuel at a moderate tariff, it must prove an untold benefit to all the interests of the Territory.

Indifference.—It is astonishing to the careful observer to witness the indifference with which many people regard curious objects. The rarest fossil, the most curious relic, the most wonderful developments of art or nature are passed by, by many, with the most stolid indifference. Such people, if they had the stone with which David slew Goliah, and it chanced to be a piece of quartz, would pound it up for the grain of gold it might contain; or if the apple which Tell shot from his son's head, or that which revealed the law of gravitation to Newton, or even that which Eve tasted in Eden should fall into their hands, would sell them to a restaurant cook to be made into apple dumplings.

A Volcano in Butte County.—The old story of a volcano in Butte county has been revived. It is said to be somewhere not far from Dogtown, on the Honey Lake road, and is now in a state of eruption. It is said to be on one of the tributaries of the north fork of the Feather river. We suppose this is the same mountain which was discovered in 1861 by a party of Pitt river prospectors, and then in action, emitting smoke, flame and lava. Why don't some of the enterprising prospectors of that region render themselves famous by visiting it and giving us the result of their observations?

Gold in a Corner.—The advance of gold in New York is reported to be in consequence of a "corner"—the same as that which sent Harlem stock up to 230, when intrinsically it was not worth a cent. The time-sales of gold are stated at $2,000,000 more than all the gold in New York. Neither the prospects of the military campaign, the state of the currency nor the financial condition of the Government, have anything to do with the rise of gold. So says an Eastern paper.

The New York *Journal of Commerce* says that never was so much vigor displayed in the preparation and manning of war vessels as at the present time. An entire fleet, larger than our entire navy was before the war, is now fitting out at three or four yards to go southward. Some important naval movement is evidently in the early future.

The *Nevada Gazette* has come out in an enlarged form and with a new dress. This enlargement has been rendered necessary by its increase of advertising patronage. Glad to hear of its success. The *Gazette* is a live paper.

LOOKING EASTWARD.

The silver hunters who have gone forth from California have progressed so far eastward that they are now beginning to look to the Atlantic side of the mountains, instead of the Pacific, for their supplies. The increasing disparity in the value of the circulating medium of the two sections, and the necessarily heavy cost of transportation, which has the Pacific for its base, is rapidly bringing nearer and nearer to San Francisco, the meridian of the mining region at which supplies can be furnished cheaper from the Mississippi valley than from this city; and in so much is the region which must become tributary to San Francisco lessening in extent. St. Louis must ere long become a formidable rival of this city for the trade of even the extreme western limit of the Great Basin. The Pacific Railroad, as it progresses westward in its construction, will lend much more to the advantage of the former than the latter city.

There is evidently a growing feeling among the miners in the central portions of the Great Basin, that it is to their interest to look eastward for their supplies, and gradually to conform their currency to that in circulation there. A late correspondent of the *Call*, of this city, writing from Reese River, tells our merchants and capitalists that they are assuredly pursuing an unwise policy in not investing in the mines of that region. He avers that the capitalists of New York entertain a more appreciative opinion of those mines, and that, in consequence, the Reese Riverites are taking steps to open a direct overland traffic with the great commercial city of the Atlantic.

We apprehend that movements of this kind will be influenced in a very slight degree by the mere circumstance of friendship. Interest, not friendship, always regulates the course of trade. When New York merchants can lay down their goods at Reese River, cheaper than San Francisco merchants can, then, and then only, will there be anything like a general change in the current of trade. It may be well for San Francisco merchants to cast about and do what they can, legitimately, to permanently secure the trade of that portion of the country. Roads should be opened, and where practicable, shortened and improved. There is little doubt but that the present depreciation of the Federal currency is operating seriously to the disadvantage of San Francisco, in this particular. It is to be hoped, however, that this disadvantage will soon be, in a great measure, removed. A favorable result of the two great campaigns in Virginia and Georgia, cannot fail to greatly lessen the present disparity between gold and greenbacks. Our friends in Reese River will then witness a more liberal flow of capital toward their mines than probably obtains at the present time. In the meantime, let the miners push ahead in the development of their claims, and they may obtain a price so much in advance of what they are now asking, that they will consider it a piece of extraordinary good fortune that San Francisco capitalists did, for a while, hold a pretty tight grip on their purse strings.

Meat in New York.—The N. Y. *Tribune* says that beef is worth 18 cents per pound, on foot, in New York, and advises its readers to either abstain entirely, or to use it sparingly until the price comes down. Other New York papers say that the consumption of meat in that city has already fallen off twenty-five per cent, as compared with the consumption during the corresponding period last year.

Important to Miners.—It has recently been discovered that a weak solution of the sulphate of copper, is an excellent material for the preservation of wood. Timbers soaked in this solution have been found, by experiment, to last more than twice as long as those used without any preparation.

Another Dividend—The Belcher Company of Virginia City, have just declared a dividend of $24 per foot. It has been but a short time since their first dividend was declared—but little over a month.

ESMERALDA.

The business of Aurora has greatly improved within the past month. The merchants and miners are reported to be doing better than at any time during the past year. Money is quite freely circulated, and it is said there are but few idle men in the district, except constitutional loafers and others too lazy to work. We gather the following facts from a gentleman resident of this city who has just returned from a short visit to Aurora:—

The Great Western Tunnel and Mining Company, which is one of the earliest locations on Silver Hill, is running to strike several of the richest veins in Esmeralda, among which are the Antelope, the Utah, the Cortes, the Winnemucca, etc. The locations of this Company number some twenty veins, all of which must be intersected by the course of this tunnel. The Company claim 900 feet on each side of the tunnel, upon each of their veins. They are about 300 feet lower than any other tunnel in the hill. The Company is out of debt. Most of the men now at work receive stock in part pay, at a given price, they preferring that to cash, as at the present time there is little or no stock of this company in the market.

This Tunnel is one of the best located in the district, and the management under the present new board of Trustees is cautiously and judiciously conducted, and strictly for the interests of all the shareholders instead of for the benefit of a few of the chief managers.

The Moscow Company, near the Ætna, on Last Chance Hill, is accounted a good mine, by those well acquainted with it. Rock from this mine was exhibited at the State Fair, last summer, which was very rich. The rock has paid at the mill from $80 to $125 per ton. It is much to be regretted that work upon this mine has not been pushed forward with more energy. The stockholders appear to have the fullest confidence in it, and have held back merely on account of the hard times. We understand that under present favorable auspices, work upon the mine will probably soon be resumed.

The Mendota and Sunshine are also favorably spoken of. Considerable work has been done upon both. Upon each of the companies mentioned the amount of work done has been sufficient to give the proprietors a perpetual title, according to the laws of the district.

In the Rel Del Monte, our informant states, that good rock was struck on Friday of last week, in two of the shafts on that claim—the Yellow Jacket and Greenman. The Company's Mill is running night and day and constantly turning out bullion in large amounts. Stockholders in this mine will do well to hold on to their stock.

The Wide West Company are still driving down their incline, below their tunnel level. They are now in a finely developed ledge.

The Cortes, Utah, Crocket and Spring Valley have each a quantity of rock on hand from which they are now crushing.

The Young America Tunnel Company has now a large pile of rock upon their dump from which they are crushing with a yield of from $140 to $165 per ton. We understand that this company has a large surplus in their treasury, some of which they are expending in the purchase of new mines, preferring to thus invest, at the present low rates, rather than to declare a dividend. The bullion from this mine assays about $6.50 to the ounce, being very rich in gold.

Our informant expresses the opinion that the present yield of bullion from the Esmeralda mines, in proportion to the capital invested there, the number of stamps in operation, and the amount of labor employed, is in excess of the yield of the mines in and about Virginia City.

Capt. Kinn's opposition steamer Washoe has proved herself the fastest craft on the Sacramento river. It is said that arrangements are being made to construct another boat to run on alternate days with the Washoe.

The sale of real estate in this City is remarkably limited at the present time.

MINING SHARE MARKET.

The Mining Share Market still continues exceedingly depressed. Nothing of special interest has characterized the market during the week just passed. With two or three exceptions everything on the list manifests a greater or less decline. Speculative enquiry appears to have pretty much ceased, and the transactions in leading shares are largely on account of foreign capitalists. We append our usual remarks.

Ophir has been more active; 267 shares have changed hands the past week against 85 the week previous. Opening on Monday at $750, it advanced to $825 on Tuesday, but gradually declined to $725@$715, seller 10, at last evening's board.

Gould & Curry has been somewhat less active but still continues the chief feature of the market. It has fluctuated considerably during the week, varying from $1,600 to $1,800. Opening on Monday at $1,600, it touched $1,800 on Wednesday and closed, last evening at $1,700 cash and $1,725, seller 10.

Challar maintains its last week's figures with a large increase of business.

Savage has declined to $950, with but little business.

Potosi has been quiet the present week until yesterday when it found a single purchaser at $1,000.

North Potosi has been more active, ruling at about last week's figures.

North American has met with a material advance, from $60 to $72½; it is held quite firmly at $70.

Imperial has been somewhat more active at slightly improved figures.

Belcher has declined from $1,050 to $950; but two transactions are noticed. A dividend of $24 has been declared for the past month.

Yellow Jacket found a purchaser at $740 on Saturday last, and later in the day a seller at $700, since which it has not been heard from.

Golden Age and Empire has still further receded to $14, at which figure it closed on Monday, since which it has been quiet.

Burning Moscow has further receded and with a large increase of business. We quote it at $15.

Melones has receded from its advance of last week to a figure a little lower than it held the week previous. We note, however, but a single transaction, of 20 shares at $7½.

Lady Bryan has still further declined, with a large increase of business; 1,930 shares have changed hands since our last issue at from $13 @$6½, closing at $8¾.

Baltimore American has met with a light business at the uniform rate of $40, a slight decline from last week.

Nevada (J. G.) has been quite inactive, not having been heard from since Saturday last, when we notice a single transaction at $25.

Uncle Sam may be quoted at $405.

Antelope, (Esmeralda) may be quoted at $25; Wide West at $7½ and Utah at $21.

At the annual meeting of Stockholders of the Mount Davidson G. & S. Mining Co. the following gentlemen were elected Trustees for the ensuing year: A. P. Stanford, James Lick Garritt W. Ryckman, James Paul, H. F. Cutter, J. R. Brandon and William Fell. At a subsequent meeting of the Board of Trustees, A. P Stanford was elected President and Wm. Fell Secretary and Treasurer.

The Camanche.—The Board of Supervisors have pledged to Messrs. Donohue, Ryan and Secor, contractors for building the Camancho, $60,000 from the City as security for the payment of damages to that amount, by the Board of Underwriters of the Monitor. In consequence of this, twenty-four men were set to work on Thursday to clear away the ground and place the blocking preparatory to laying the keel of the iron clad, which will probably be done to-day. The contractors assure the public that the work of putting up the vessel will be pushed forward with vigor. We hope no further obstacles to its completion will intervene, but must confess to some misgivings on this point.

Letter from Owensville.

EDITORS MINING PRESS:—Our Fourth has come and gone. The people of Owens Valley who collected here yesterday to celebrate the ever welcomed day have returned to their labors and the town is again quiet. The ceremonies of the day consisted of the reading of the Declaration of Independence, the delivery of an oration, and reading of an original poem, accompanied by patriotic songs, followed in the evening by a horse-race and at night a ball. Every thing passed off to the entire satisfaction of all.

Improvements in town, as elsewhere in the valley, are still going on. The farmers are bringing in garden produce in abundance, and old prospectors know well how to appreciate the many good things offered to their palate. The new saw mill, near Bishop's Creek, will be turning out lumber within two weeks.

The claims in this, the Keyes district, are gaining a good reputation, especially those that have been the most worked, say to the depth of 75 or 100 feet. Such ledges are pronounced the best, simply because the more a ledge is developed, the more people are convinced of its wealth and permanence. Capital is all this camp needs to make it one of the richest and most productive districts in the State. It would require but little capital to place many of the mines here in a paying condition, as all must know who have visited and examined for themselves the mines and noted the abundance of water power, as also the many other natural advantages of the country.

From the mines below we hear that rock from several prominent ledges is being taken out for crushing at the different mills. The Ida and Union mills are now running. The mill at San Carlos starts to-morrow. Some bullion from the Union Company's mill, taken from the Eclipse rock, passed through here yesterday. The rock produced $70 per ton.

A few days since, I had occasion to visit Montgomery District, and while there, I examined the Crockett, Maid, Mississipi and Lookout ledges, and I found them to be well defined, and permanent, with a large amount of very rich mineral distributed through the rock. These ledges are located on the first foot hills, at the western base of the White mountains, within two hundred yards of a large creek, and in the midst of a large section of piñon timber land. We are now just beginning to have warm weather. It has been unusually cold here, during the spring and summer.

PROSPECTOR.

Owensville, July 5th, 1864.

THE KEEL OF THE CAMANCHE was laid yesterday, and her stem put in position. The shears for hoisting the stern-post were also up last evening, so that we may say that the work of putting together this hitherto ill-fated ironclad is now fully under way. Some idea may already be formed, from the length of her keel, of the huge proportions which this great mechanical curiosity will assume when ready to take her place in her natural element.

VARYING WANTS OF MEN.—Earth, water, air, light and warmth are universal conditions of growth. But no two plants agree precisely in the way in which these should be supplied and used. The skillful gardener succeeds, to a degree which astonishes all who do not know that the secret of his success is the exact adaptation to each of his plants. If I might add one other to Esop's Fables, and suppose plants as conscious and talkative as his animals were, we will hear that oleander talking to its neighbor, a tea rose: "You see how green and fresh my leaf is, and I am as strong as a tree, and my blossoms are as full as your own, and equal them in spicy fragrance; it is because I am as wet as possible all the time; and if you would be just as wet, your beauty and your sweetness, would be doubled." If the poor rose followed this counsel a fungus would soon creep along its stem, its leaves would curl and droop, and its buds fall before they had unfolded. For the rose needs comparatively little moisture, but it is hungry for light and water.

We all know that there are things which are good and right and necessary for all; and it is very hard for us to believe that whatever is good and right for us is not so for everybody. It is hard for us to acknowledge and respect the peculiar nature and the peculiar wants of our neighbor. We wish sincerely, perhaps fervently, to do good to him; but instead of trying to do him good in the way which is best for him, we insist that it is only his fault if he does not prosper under the treatment which would be good for us. Let the garden make us wiser.

THE SACRAMENTO VALLEY RAILROAD has secured from the county court an affirmation of the right of the company to lay down their track along the levee, in Sacramento, to K street. This is a prompt recognition of right. The company set a gang of men to work on Tuesday to re-lay the track which had been torn up by the city authorities. This will facilitate the business of the company and greatly enhance the convenience of travelers who arrive on the Bay steamers and wish to travel on the Valley Road.

S. W. GRUSH, a well known and enterprising caterer of Nevada, who has repeatedly met with misfortune by disastrous fires and floods in that City, has taken charge of the culinary department of the steamer WASHOE. It could hardly have been entrusted to better hands.

LITHOGRAPH OF THE PAVILION.—We shall soon issue, for sale, a fine lithograph engraving of the new Mechanics Pavilion, now being erected on Union square, in this City.

FIRE.—A foundry in Yreka, owned by P. J. Shepard, was destroyed by fire on Saturday evening last. Loss estimated at $15,000.

QUARRY MEN and Marble Workers will please observe a notice of an engine and other machinery, advertised for sale in our issue to-day.

A SHOP in a Sicilian village is known by a flag projecting from its front, and never by a sign or name of any kind.

THE San Francisco City Treasurer reported a cash balance of $214,819 in the treasury on Wednesday last.

The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Notice of Dividend.

At a meeting of the Trustees of Crescent Quartz Mining Company, held June 20th, 1864, a Dividend of Fifty dollars per share was duly declared, payable on July 1st, 1864, at the Office of the Company, Indian Valley, Plumas County, Cal., or in San Francisco, at the office of Isaac Clazier & Bro., 311 Clay street. [26-4t] WM. A. BOLINGER, Sec'y.

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "SLIGHT COLD" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. *"Dr ton's Bronchial Troches"* give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in the pocket and taken as occasion requires.* Agents for California,

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

San Francisco, June 23, 1864. 1-3m

Correspondents in New York, LEES & WALLER, No. 33 Pine street.

Correspondents in London, BANK OF LONDON.

THE UNDERSIGNED GIVE NOTICE THAT THE ABOVE named corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and with the interior of this State, the neighboring State and Territories, and with Mexico; also with the At antic Cities, Europe, China, and the East Indies; for which they are provided with amp e facilities, and in conformity with articles of association will commence operations on the fifth day of July next, at the Banking House now occupied by DONOHOE, RALSTON & CO., corner of Washington and Battery Streets.

With the view of giving to the business of the corporatiou all the efficiency and promptitude of a private banking firm, together with that confidential secinsion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in all business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members:

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each Certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Trustees:

Lloyd's New Amalgamator

Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 600 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15¾ ozs., Ryerson's machine having only 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 75

The assay being made by Messrs. Molitor & Co.

From 2 pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Hewston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $35 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 54.2 per ton; and over the works at the mill, $62 54.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. Munday, who obtained: Gold, $0.19, Silver, $1.52, amounting to $2.71-100—equal to $361.33-100 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. C. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $226.18-100. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.58-100—equal to $111.60 to the ton. Difference in favor of Lloyd being $114.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and is certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kustell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMIned the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, whore all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St, between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR having completed arrangements for its manufacture at the Union Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to HUNGERFORD & PRATER, Proprietors.

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press
COMMENCES
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Indnstrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new Inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered " one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 67, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

A GREAT INDUSTRIAL FAIR!

—TO BE—
Opened in San Francisco,
—ON THE—
30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked separately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time,

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Mining Notices.

Advertised in Previous Issues.

Arizona Consolidated Mining Company, Eureka District, Arizona Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 29th day of June, 1864, an Assessment of 20 cents per share was levied upon the capital stock of said Company, payable immediately in United States gold coin, to the Secretary, at the office of the company in San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 29th day of August, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. N. G. FRENCH, Sec'y.

Office, 728 Montgomery street, San Francisco. 1-4t

Astor Ledge and Company, Big Creek District, Lander county, Nevada Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of May, 1864, an Assessment of fifty cents per share was levied upon the capital stock of said Company, payable immediately, to the Secretary, at No. 3, Armory Hall, 3d floor, corner of Montgomery and Sacramento streets, San Francisco.

Any stock upon which said assessment shall remain unpaid on the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 4th day of August, 1864, to pay the delinquent assessments, together with costs of advertising and expenses of the sale.

S. PURDY, Secretary.

Office, Armory Hall, corner Montgomery and California streets, San Francisco. 25-4t

Amador Consolidated Silver Mining Company. Amador District, Lander County, Nevada Territory.

Notice is herby given that at a meeting of the Board of Trustees of said Company, held on the 21st day of June, 1864, an assessment of Four Dollars per share was duly levied, upon the capital stock of said company, payable on the 27th day of June, 1864, in gold coin of the United States of America, to the Secretary, at the office of the Company, No. 623 Washington street, in the city of San Francisco.

Any stock upon which said assessment shall remain unpaid on the 27th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 8th day of August, 1864, to pay the delinquent assessments and cost of advertising and expenses of sale. F. S. CARTER, Secretary.

25-5t Office, 623 Washington street, San Francisco.

Augusta Gold and Silver Mining Company, Augusta District, Lander County, N. T. Office, 406 Front street, San Francisco, June 22d, 1864.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held November 2d, 1863, an assessment, No. 1, of twelve and a half (12½) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No 2, of twelve and one-half (12½) cents per share was levied upon the Capital Stock of said Company. Both assessments, Nos. 1 and 2, payable immediately, in United States gold coin to the Treasurer, at the office of said Company, or to John Moffat, Superintendent of said Company, at the mine, in Nevada Territory.

Any stock upon which said Assessment shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with costs of advertising and expenses of the sale. JOHN SHAW,

26-5t President.

Beaver Gold and Silver Mining Company, Gold Hill, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 20th day of June, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable on the 21st day of June, 1864 in United States Gold Coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on the 23d day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before will be sold on Monday, the 8th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. VALE, Secretary.

Office, Nos. 55 & 56 Exchange Building, N. W. corner Washington and Montgomery Streets, San Francisco. 26-4t

Bay State Gold and Silver Mining Company, Turnback District, Tuolumne county, California.

Notice is hereby given, that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the Bay State Gold and Silver Mining Company, there will be sold, at Public Auction, to the highest bidder, for cash, in U. S. gold coin, on the 11th day of July, 1864, at 11 o'clock A. M., at the salesroom of L. Keller, No. 537 California street, San Francisco, so many shares of the capital stock of the Company, standing in the names of the following persons, or shareholders, as will be necessary for the payment of Assessment No. 4, of two dollars per share, duly levied thereon March 23d, 1864, by the Board of Trustees, together with the expenses of advertisement and sale, unless said Assessment and accruing charges are previously paid:

And in accordance with law, and an order of the Board of Trustees, made on the 31st day of Mny, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the office of the Company, Room 8, 611 Clay street, San Francisco, on the 16th day of July, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale. O. BOWER, Secretary.

1 Office, No. 611 Clay street, San Francisco.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

A Good Canvassing Agent Wanted at this Office, immediately, for the interior. None but an active business man with good references, need apply.

Mr. Jarvis Jewett is our duly authorized advertising agent and collector in this city.

Sierra Consolidated Gold and Silver Mining Company.—Location of Works in Sierra County, Cal.

And in accordance with law, and an order of the Board of Trustees made on the 31st day of May, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the office of the company, Room 8, 611 Clay street, San Francisco, on the 16th day of July, 1864, at 12 o'clock M., of said day, to pay said delinquent assessments, together with the costs of advertising and expenses of the sale.

G. BOWER, Secretary.

Office, 611 Clay street, San Francisco. 1

Silver Age Mining Company, Amador District, Lander county, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 25th day of June, 1864, an Assessment of One and Fifty Hundredths ($1.50) Dollars per Share was levied upon the Capital Stock of said Company, payable immediately to the Secretary in United States Gold Coin, at the office of the company in this city.

Any Stock upon which said Assessment shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 13th day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale. By order of the Board of Trustees.

SAM. P. HOWES, Secretary.

Offices, 42 and 43 Government House, N. W. cor. Sansome and Washington streets, San Francisco. 1-5t

Schmeltzer Mining Company, American District, Humboldt County, Nevada Territory.

A Stockholders' meeting of the Schmeltzer Mining Company will be held at the office of the company, 621 Clay st., on Wednesday, the 3d of August, 1864, at 7½ P. M., for the election of officers, and such other business as may be presented.

M. O. ELMORE, Secretary.

San Francisco, July 2, 1864. 1-4t

Schmeltzer Mining Company, American District, Humboldt County, Nevada Territory.

Notice.—There is delinquent upon the following described stock, on account of assessment levied on the 11th day of April, and 25th day of August, 1863, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 30th day of May, 1864, so many shares of each parcel of said stock as may be necessary will be sold at the auction rooms of Messrs. Jerome Rice & Co., No, 327, Montgomery street, San Francisco, on Wednesday, the 13th day of July, 1864, at One o'clock P. M. of said day, to pay the delinquent assessments thereon, (being fifty cents per share) together with costs of advertising and expenses of the sale.

J. F. MILLER, Secretary.

Office, 416 Washington street, San Francisco, June 25th, 1864. 26-3t

POSTPONEMENT.—The above sale is postponed until Saturday, July 23d, 1864, at the same place and hour. By order of the Board of Trustees. J. F. MILLER, Secretary. 2-2t

Sistera Gold and Silver Mining Company, Augusta District. Lander county, N. T. Office, 406 Front street, San Francisco, June 22, 1864.

Notice is hereby given, that a meeting of the Trustees of said Company, held October 17th, 1863, an Assessment, No. 1, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No. 2, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Both Assessments, No. 1, and No. 2, payable immediately, in United States gold coin of the Treasury, at the office of said Company, or to John Moffet, Superintendent, at the mine, in Nevada Territory.

Any stock upon which said Assessments shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with cost of advertising and expenses of sale.

25-5t J. FRANK MILLER, President.

Selleck and Valley Forge Copper Mining Companies, Amador County, Office, 610 Front Street, Room 4, up stairs.

Notice.—There are delinquent upon the following described stock, on account of assessment levied on the 8th day of February, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 8th day of July, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on the 30th day of July, 1864, at the hour of 11 o'clock A. M., of said day, to pay said delinquent assessments thereon, together with costs of advertising and expenses of the sale.

A. L. CHAMBERLIN, Secretary.

Office, Southwest of corner Clay and Montgomery streets, San Francisco. 3-3t

La Travlata Gold and Silver Mining Company, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 12th day of, July, 1864, an assessment of 50 cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. AUG. KUNAST, Secretary.

Office, 540 Washington street, San Francisco. 3-4t

Grosh Consolidated Gold and Silver Min. ing Company, Storey county. N. T.

Notice.—There are delinquent upon the following described stock on account of assessment levied on the 11th day of June, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

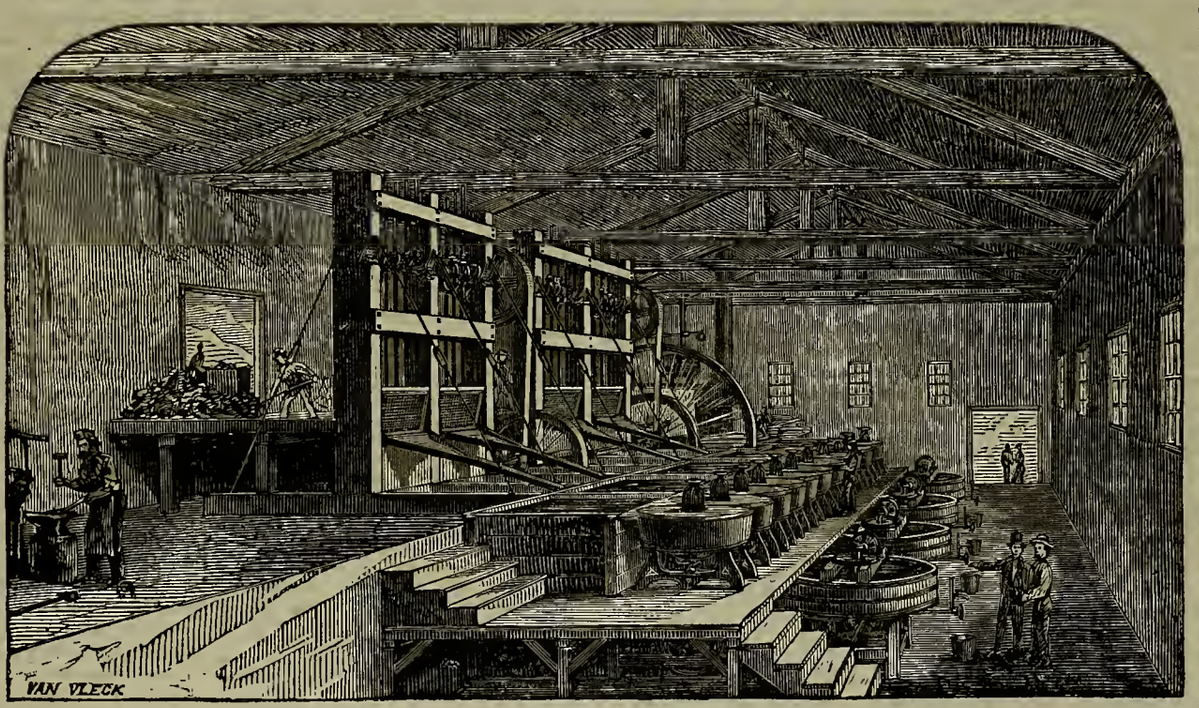
QUARTZ MINING.

Until within a very few years, mining machinery and mining processes have as a general thing been very rude and inefficient. It is only since the opening of the mines of California that the inventive genius of the age has been brought to bear in this direction. The quartz mill or rather stamping mill as it was called, was but a few years since, a very rude affair. It consisted generally of a hollow trough, with a ground floor made hard by stones pounded into it, by the action of the stamps. An iron plate was sometimes used as a floor. Through this, lengthwise, a stream of water was conducted, to carry off the pulverized ore. Sometimes it was discharged over the sides. The ore was subsequently submitted to various processes of washing by which the metal was but imperfectly separated. In some instances various imperfect processes were brought into use to reduce the sands still finer than could be done by the stamps; but owing to the general rudeness of all the machinery employed, the entire process of reducing the ores of the more precious metals, was but very imperfectly performed; and the percentage of loss was extremely large. In gold mines none except the richest could be worked to any profit, even with the cheapest of European labor.

Soon after the discovery and successful opening of mines of gold producing quartz in California, the attention of inventors was called to adapt improvements in the class of machinery employed for reducing and extracting the ore. A large amount of experimental machinery was devised and put to the test, but at first with very little success. Millions of dollars were thus thrown away in ineffectual attempts at the introduction of a new class of machinery. These experiments failing, one after another, quartz operators very generally came to the conclusion that the plain old stamps, with sluices and shaking-tables, were the best that could be devised. Inventors then applied their ingenuity to simply *improving* such machinery as we already had in existence, ignoring new principles entirely. The old fashion wooden stems, flat bed-plate and huge wooden shaft, or arbor, were metamorphosed into neat iron stems, so made as to revolve constantly, while at work, working in high, tight mortars, from which there could be no leakage, and driven by an iron shaft, with lifters so arranged as to almost entirely avoid the friction against the guides, which formerly absorbed a large portion of the power employed.

The numerous appliances, for further pulverizing the ore after it left the stamps, involving new and oftentimes complicated machinery, was quite generally thrown aside, and the old pan principle, with mullers and some simple contrivance to establish a current of the pulp from the center to the circumference, in use many years ago, has been taken up and improved upon, until we now have quite a number of different styles of pans of this description, neatly and carefully constructed, so as to do their work most effectually and economically, and all presenting a most striking contrast with the rough and uncouth machines from which they were originally designed.

Those of our readers who were familiar with the quartz mill as it was presented six or eight years ago, and used now in many places, will notice a most marked contrast in the annexed engraving. No effort that we have seen has succeeded so well, as the artist of the accompanying engraving, in giving a representation of "A Model Quartz Mill." Readers at the East, and in other places, who have never seen the inside of such a mill, can obtain from the above, which is a fancy sketch, a very correct idea of what the inside of a quartz mill should present.



A MODEL QUARTZ MILL.

But before entering the mill let us learn where the quartz which feeds it comes from. Amidst the great mass of rocky material of which the outer portion or crust of the earth is composed, is found a system of rocks, to which geologists have given the name of lodes or veins. It is in these lodes or veins that the more precious metals, such as gold, silver, copper, antimony, zinc, etc., are generally found. The lodes, which we will call them, are thin flattened planes, generally a few feet, but often only a few inches thick, extend down into the stony structure of the earth, usually to great and unknown depths, "cropping out," or showing themselves upon the surface longitudinally, sometimes for many miles. Those who have never seen a lode can form the best idea of one by taking a book and placing a thick sheet of colored paper between its leaves. When the book is closed that sheet of paper bears a similar relation to the book, as the quartz lode does to the contiguous portions of the earth through which it runs. These lodes usually go down at an angle of from 20 to 45 degrees. They sometimes appear to have been forced up from below into great fissures or cracks in the rock; at other times their origin appears to have been sedimentary or filled in from above. The theories of their formation are various.

The miner finds one of these lodes and sinks down into it. This opening is called a shaft or incline. If it proves to contain any valuable metal he takes out the entire vein, or so much of it as appears to be rich, and continues his work in depth and length as long as it continues to pay. When a lode is found on the side of a hill the miner drives into it on a level, for the convenience of taking the ore out more readily, and of allowing the water to run away without the cost of pumping. Such an opening is called a tunnel.

When steam power is employed the mill is usually placed near the mouth of the shaft or tunnel, so that the ore from the mine may be conveyed to it at the least cost and labor. When water power is employed, the mill is often times put up at quite a distance from the mine. The ore as it comes from the mine is a mixture of hard and soft substance; sometimes coming out in large blocks, as large as can be conveniently handled by one or two men. This ore is sometimes calcined or burnt before being taken to the mill, in order to render it more friable and easy for crushing. This operation is performed by spreading over a small surface a lot of dry wood and placing the quartz upon the top of the same. This being set on fire heats and softens the rocky ore. Water is sometimes thrown upon it while cooling to break it up. The ore is then taken to the platform in front of the mill, a small pile of which is represented on the left hand side of our engraving.

When the mine is worked through a tunnel, a narrow railroad track is laid along the same, and if the mill is near the mine the railroad is continued to the platform in front of the mill. The rock is run out in a hand car. One of these cars is represented in our engraving, which has just been run out from the mine with a load of ore. The hill into which the tunnel is ran is also seen in the distance. After arriving upon the platform, and previous to its being placed under the stamps the ore is usually broken into fragments about the size of hens eggs and smaller. This is sometimes done with a light hammer and frequently by machinery. Sometimes the ore is assorted and separated into first and second and perhaps third class, according to its apparent value.

The ore as it comes from the mine is of various degrees of richness, from that which will

not pay half the expenses of working up to that which is very rich. All mines yield good and poor ore, and from this fact chiefly, arises the great uncertainty of mining. A mine may be rich to-day, with every appearance of continuing so, and in a few days hence the workmen may come to a class of rock too poor to pay for working.

The cost of raising rock from the mine is from $3 to $30 per ton, varying with a great number of circumstances, such as hindrances from water, variation in depth, in hardness of rock, amount of dead work to be done, etc.

The cost of crushing and working the rock for gold varies from $3 to $10, according to location, cost of motive power, etc. The cost of working silver ore is greater, and depends much upon the nature of the ore to be worked, the "process" to be employed, etc. The usual price of working is from $20 to $30 per ton. A large portion of gold now sent from California and all the silver is from our quartz mines. Not much if any over one half of the gold which is now going forward, is from the placers. The placers, and river diggings, are fast being worked out, and, with the exception of the deep, hill diggings are now pretty much abandoned to the Chinese. It is to our quartz mines that California is to look for her future prosperity. They are considered inexhaustible.

The location of quartz mining claims is a very important matter, and one to which too little attention has been given. It is owing to the irregularity and imperfect manner in which locations have been made that our miners and mining shareholders have been so terribly cursed with the burthens and perplexities of law-suits, which, for the last year or two have absorbed a very large proportion of the net earnings of many of our mines. Each mining district makes its own laws regulating the amount of ground which a man may take up, how it shall be measured, and where recorded; how much and when work shall be done to hold it, etc. It is in consequence of a neglect to attend to the requirements of these laws that miners become so often involved in suits. The laws are usually plain, simple and easily understood, and it is the miners fault if he fails in conforming to them. These laws usually allow 100 feet in length upon a ledge to each man, sometimes 150 or 200 feet, with a certain number of feet on each side for convenience of working, etc. Claims are usually taken up in companies, three or four, or a dozen will unite in a company and take up each a claim on a ledge which some one of the company may discover. The discoverer is usually allowed an extra claim for discovery. The claims must be marked off, recorded and worked in accordance with the laws of the district in which the discovery is made.

We will now go back to the mill, and take the one we have in the illustration before us for a model. We have already learned where the rock comes from, how it is brought to the mill and prepared for crushing. The upright portion which we see nearly in the center of the picture, is the stamps, which are divided into four batteries of four stamps each. The stamps are moveable pillars of wood or iron, placed vertically in their position, and securely held by frame work. These pieces of wood are armed at the bottom with a large block of iron, weighing from two to three hundred lbs., or more, which are called the "heads." The stems are secured to the heads by a socket in the iron. Attached to the heads is a moveable "shoe," also of iron and secured to the head by another socket. These shoes weigh from 60 to 80 lbs., and as fast as they become much worn are taken off and new ones supplied. The stamps are raised by a shaft running longitudinally across the stamps, to which is attached a cam for each stamp, and by which the stamps are lifted. The stamps work in a long iron mortar into which the quartz is fed from the front of the battery, not seen in our representation. The feeder is seen in the act of shoveling some quartz to place in the battery. A stream of water is made to pass constantly through this battery which carries off the fine quartz as fast as it is pulverized. In passing off it is made to pass through an iron screen, the size of the holes in which regulates the fineness to which the quartz must be reduced. After passing through the screens, the "pulp," as it is now called, is collected in a trough and conducted into "settling vats," one of which is seen in our picture for each battery.

These vats are usually some six or eight feet long, and from two to three feet wide and deep. Two vats are sometimes attached to each battery, and while one is being filled, the other, after settling, is shoveled into the pans, which will be noticed in the upper platform, just in the rear of the vat. About 800 pounds of pulp is the usual charge for one of these pans. It is allowed to remain in the pan from two and a half to three hours. These pans are about four feet in diameter, and two are commonly used for each battery. The pulp, while in the pans, is made to pass between flat iron surfaces, by which it is reduced still finer than when it left the stamps, and more of the gold consequently liberated. A quantity of quicksilver, more or less, according to the nature and quantity of the ore, is placed in the pan for "amalgamating" the gold. This process of amalgamation is simply a coating of the particles of gold with quicksilver, by which it is made to adhere to the mass of quicksilver, and so prevented from being washed away with the sand.

After remaining the proper time in the pans it is drawn off into the "Separators," as they are called, a row of which is seen on the lower floor of the engraving. These separators are usually constructed of wooden sides attached to an iron bottom, and in shape much like the pans. The pulp is stirred slowly in these separators by rotary stirrers, and the amalgam allowed to settle gradually to the bottom, from whence it is drawn off, by means of the tube shown in the engraving, into a suitable vessel together with the mass of quicksilver. The quicksilver is then strained through thick canvas or buckskin, the gold remaining in the strainer in the form of a dry, hard "amalgam." This amalgam is then placed in a common retort, which is heated to such a degree as will evaporate all the quicksilver from the mass of amalgam, leaving the gold in the shape of a hard, spongy mass of metal. This "retorted gold," as it is now called, is then placed in a crucible, melted and run into bars or "bricks" as they are sometimes called from their shape conforming to the common article of brick.

The process of amalgamating, cleaning up and retorting silver is the same as that of gold. The silver mines nearly all contain more or less gold, varying in all possible proportions, until the greater quantity of gold entitles the mine to the denomination of a gold mine.

The Swing as a Cure for Consumption.—Dr. L. Long, of Holyoke, Mass., recommends the gymnastic swing as a preventive and cure of pulmonary disease. He says:—"I mean the suspending of the body by the hands, by means of a strong rope or chain, fastened to a beam at one end, and at the outer a stick three feet long, convenient to grasp with the hands. The rope should be fastened to the center of the stick, which should hang six or eight inches above the head. Let a person grasp this stick, with the hands two or three feet apart, and swing very moderately, at first—perhaps only hear the weight, if very weak, and gradually increase as the muscles gain strength from the exercise, until it may be freely used from three to five times daily. The connection of the arms with the body (with the exception of the clavicle with the sternum or breast-bone) being a muscular attachment to the ribs, the effects of this exercise is to elevate the ribs and enlarge the chest; and as nature allows no vacuum the lungs expand to fill the cavity, increasing the volume of air—the natural purifier of blood, and preventing congestion or the deposit of tuberculous matter. I have prescribed the above for all cases of hemorrhage of the lungs and threatened consumption, for 35 years, and have been able to increase the measure of the chest from two to four inches within a few months, and always with good results. But, especially, as a preventive, I would recommend this exercise."

A drove of goats, from Tuolumne county, arrived at Gold Hill, Nevada Territory, the other day, where they are to be used for milking purposes.

DRESS.

The main object of dress is not to impart warmth, but to keep the natural warmth about the body, and thus prevent those sudden and fatal changes from heat to cold which occur in passing from an out-door temperature of sixty-five degrees to that of zero or lower without, as in mid-winter. The temperature of the northern States varies over a hundred degrees during the year, sometimes nearly half that within twenty-four hours. Dress provides against these destructive sudden changes, by maintaining the warmth of the skin at its natural state, which is ninety-eight degrees, whether a man is on an iceberg in Greenland or on a sand island in a tropical sea. The materials of clothing which best keep the heat about the body are called *non*-conductors, such as furs and woolens, while the conductors are such as cool the body, by conveying the natural heat from it with great rapidity; the greater conducting ability is measured by the greater coldness which an article causes on the first instant of its application. In the very coldest weather fur and woolen flannel appear but a little cool, and that but for an instant, and the next there is a sensation of increasing, comfortable warmth; cotton flannel feels colder than woolen, silk colder than cotton, Irish linen greatly colder than either. A damp woolen shirt feels but a little cold, and begins to get warm and dry in an instant, even if the person is in a profuse perspiration; while an Irish linen or silk shirt, if damp with perspiration or otherwise, feels cold and clammy and sepulchral on the instant of its touching the skin, and will remain so for hours without getting dry, never failing to leave a cold in some troublesome or even dangerous form; hence, as persons perspire easily and profusely in summer, Irish linen cannot be worn in warm weather with impunity by the working classes and those liable to perspiration from a little walking or exercise. Thus it is that British sailors in the navy are compelled to wear woolen flannel shirts all the year and in all latitudes—in the north, because it keeps the natural warmth from escaping from the body, thus maintaining a temperature of ninety-eight degrees about the skin; and in hot climates in summer because, although woolen is a bad conductor of heat, it is a good conductor of water; for if a woolen blanket is thrown over a sweating horse, in a very short time his hair and the inner side of the blanket will be dry, while the microscope will discover the whole outside surface spangled with millions of tiny drops of water. For these reasons woolen flannel should be worn next the skin by all our people from one year's end to another—a fine material in summer; in winter a more substantial article. White flannel fulls up, and becomes hard and stiff unless about a fifth of it is cotton. Colored flannel, especially red, always remains soft and pliable. These things are indisputably true, and a practical attention to them, on the part of all hard working people, would prevent an amount of pain and sickness every year which figures cannot express. This would be especially true if, in warm weather, when fires are not needed in the house, farmers and other laborers would wear a moderately stout article of red woolen flannel as a shirt, with nothing over it while at work, but at other times a thin coat over that. Any flannel garment worn during the day should be hung up to air at night, while the night-gown all the year round should be of stout cotton shirting, for if woolen is worn next the skin all the time it makes it callous, and is otherwise injurious. The best, safest, healthful head-dress for farmers and workmen all the year round is a common, easy-fitting wool or felt hat; in winter it keeps the head warm; in summer it is a great protection against sunstroke, especially if a silk handkerchief or a few leaves of a tree are worn in the crown. Such a hat is a great preventive of baldness, if worn from early youth, because it allows the blood to flow freely to and from the scalp; but if the vessels are compressed, as is done by the common unyielding silk hat, the free circulation of the blood is obstructed, and the nourishment of the hair-roots or bulbs being cut off, the hair perishes irretrievably, causing all the discomforts and inconveniences of baldness.

Death often comes to the honest laborer, as well as to others, through the feet, either by tightly-fitting shoes, which, by obstructing the circulation, keep the feet cold, thus laying the foundation for troublesome diseases, or by shoes which do not keep out the dampness. In purchasing new shoes, or having the measure taken, put on two pairs of woolen socks, without the knowledge of Crispin, and the new pair will feel from the first "as easy as an old shoe."

A piece of tarred or pitch cloth sewed between the layers of the shoe-sole is a great protection against dampness from without; or take pitch, not hot enough to burn the leather, and apply it to the bottom and edges of the sole with a rag, let it dry thoroughly, and repeat the applications thus three or four times; it is contended that a sole thus treated will not only be impervious to water and dampness, but will wear nearly twice as long as a sole not thus treated. It is an excellent plan to have two pairs of shoes, to be worn on alternate days, so as to have a perfectly dry pair to put on every morning, allowing the unworn ones to remain in a warm, dry place. Washing the feet every night in warm weather, and soaking them for ten minutes three times a week in winter, admirably promotes that warmth, pliability, and softness of the skin of the feet, so indispensable to health and comfort, saying nothing of the cleanliness of the practice, and its tendency both to prevent and cure corns. But after all washings of the feet it is of first importance, after wiping them well, to hold them to the fire and rub them with the hands until perfectly dry and warm in every part.—*Dr. Hall.*

The Labor Question has been exciting a large share of attention in Washoe during the past few days. It appears that a serious proposition was entertained by several of the leading mining and milling companies there, to effect a general reduction of wages. It is stated that a meeting of the superintendents of the principal companies was held, at which a reduction was agreed upon—the representatives of the Imperial, Yellow Jacket, Belcher and Savage, however, refusing to enter into the arrangement, and affirming their determination of continuing to pay the old rates. It is said that a few companies have carried out the arrangement, and effected a slight reduction in the wages of certain classes of their workmen. The foremen of the different mines and mills oppose the policy, and say that it will prove a losing operation in the end. The papers generally take a decided stand against the proposed reduction, and the movement will most probably fail in seriously disturbing the rates of wages as heretofore established.

Professer Silliman.—A correspondent of the Morning *Call*, writing from Catalina Island, under date of July 11th, says:—

Our Island has been honored by a visit from the "big gun," Professor Silliman, who, in company with Mr. J. E. Clayton and another assistant, has made a thorough inspection of the Island, and examined most of the mines that are opened or being worked. The Professor is a very pleasant and agreeable gentleman, while he is thoroughly posted in science. He appears to have a favorable opinion generally of the mines here, took particular notes of the various lodes, and plenty of samples of the mineral for assay, etc.

The Professor will visit Colorado, and probably some portions of Arizona, before his return to this city.

Re-issue.—We notice that Mr. Zenas Wheeler, of this city, has obtained a re-issue of his patent for an amalgamating pan, first issued July 14th, 1863. Mr. Wheeler surrendered his original patent for the purpose of securing the perpetual and self-regulating discharge of the mercury from under the pulp by means of the chamber and tubes attached to his pans. This arrangement though delineated and lettered in his original drawings and attached to his model, were not claimed in his specification. Hence the surrender and re-issue. That arrangement now forms a part of his patent.

An Elevated Atmospheric Current.—Mr. John Wise states that out of 113 balloon ascents, in which he reached a hight of three miles, the balloon sailed to the east 112 times. In the exception she remained nearly stationary, landing three miles west of the point of ascension. This would seem to prove pretty conclusively the existence of an elevated atmospheric current in an Eastern direction, produced by the diurnal revolution of the earth.

If you count the number of dots on a pack of cards, there are 365—so many days in a year; if you count how many cards there are in a pack, you find there are 52—so many weeks in a year; when you reckon how many picture cards there are in a pack, you find there are 12—so many months in a year.

Three Captains recently mustered into the United States service at Fort Churchill were practical printers.

PETROLEUM AS FUEL.

The possibility of the introduction of crude petroleum as fuel, on sea-going vessels, has attracted much attention during the past year. The favorable report of the commissioners appointed by the Navy Department, to which we have already made several allusions, seems to have engendered, with some, a strong hope, almost amounting to conviction, that the ultimate accomplishment of so desirable an end, has been quite fully demonstrated. The highly inflammable nature of petroleum, and the abundant and apparently inexhaustible supply of the article, coupled with the favorable report above alluded to, would seem at first sight to give much countenance to such a presumption, even among intelligent and practical men.

It is true we have never seen a complete copy of the report made to the Department by the Navy Commissioners, but a careful examination of such extracts from the same as have found their way into the newspapers, betrays such an unwarrantable carelessness, either in the manner of conducting the experiments, or in preparing the report upon the same, or both, as to entirely divest them of all practical value. An English writer has also undertaken to prove the theory a scientific impossibility. He reasons as follows :

A very slight knowledge, however, of the chemical facts connected with combustion, is required to prove that at the lowest price of crude petroleum, its introduction as a fuel capable of competing with coal, is one of the wildest dreams that ever was conceived by an enthusiastic projector. It is these facts that we wish to lay before our readers in the present article.

The practically useful constituents of all varieties of ordinary fuel are two—namely, carbon and hydrogen. In some instances, as in coal and wood, oxygen is also present, and is so much loss; this is absent in petroleum. The products of the combustion of these two elements—carbon and hydrogen—are carbonic acid and water; provided the substance is perfectly burnt, then the amount of heat given out by the same material is perfectly fixed and invariable, whatever may be the circumstances under which it is burnt, and whether the combustion be effected quickly or slowly.

The most important consideration connected with any fuel is the amount of heat it gives out during combustion. Fortunately, the relative amount of heat given out by equal weights of different fuels can be ascertained with a great degree of exactness. It has been found by direct experiment that one part of carbon in burning unites with two and two-thirds of oxygen; and that, during its combustion, sufficient heat is produced to raise the temperature of 8,000 parts of water one degree of the centigrade thermometer. It has also been found that one part by weight of hydrogen unites, when burning, with eight parts of oxygen, and produces sufficient heat to raise the temperature of 34,000 parts of water one degree centigrade. Hence, the heat producing powers of carbon and nitrogen are as 8 to 34; or, in other words, hydrogen, in burning, gives out, in round numbers, four times as much heat as carbon.

Now, it makes no difference whatever to the heat producing power of these two substances, whether they are burned separately or in combination; and, if the amount of carbon and hydrogen in any compound, such as coal or petroleum, be known, the amount of heat given out by its burning can be at once determined by a simple calculation.

The relative amount of carbon and hydrogen in petroleum is about six parts of carbon to one of hydrogen; whereas in coal the amount of hydrogen is less in proportion, and there is also a small amount of oxygen present, which diminishes the heat. The result is that the heat producing power of petroleum is greater than that of an equal weight of coal; it is, in fact, about half as much again. The Federal Commissioners quoted in the *Times* state that the petroleum has double the heat-giving power of anthracite. There is no doubt that this statement is much too high an estimate, but as we have a wide margin, we will grant the assumption, although it is unfavorable to our argument. We assume, then, that one ton of petroleum has twice the heating power of one ton of coal. Now for the relative cost of coal and petroleum. The price of crude petroleum at New York, or anywhere on the American seaboard, was, on April 9, 34 to 35 cents per gallon, and it was steadily rising. The American gallon, it should be remembered, is one-fifth less than the English imperial gallon, being the same as our old Winchester ale gallon. The weight of an imperial gallon of petroleum is about 8 lbs; consequently the weight of an American gallon would be, in round numbers, 6½ lbs. This would make the cost of crude petroleum somewhat about 3d per lb. in America.

Let us compare this to the relative cost of petroleum and coal in England. The price of crude petroleum is £19 to £19 10s. per ton. This price of steam coal may be roundly estimated at 15s; or, in other words, at the lowest estimate, petroleum is twenty-five times the price of coal. Now, as even the advocates of the introduction of petroleum as fuel only claim for it a heating power of twice that of coal, it is obvious, according to their own showing, that petroleum is twelve and a half times as dear a fuel as coal. Where, then, is the saving of £2,400 per trip that was promised to the Cunard line of steamers?

A great stress is laid on the relatively greater economy of stowage; but as coal is half as heavy again as petroleum, it follows that making every allowance for the loss of space caused by the interstices of the broken coal, that there would be little advantage gained in this respect by the use of petroleum.

It is said that there is a great advantage to be gained by the rapidity with which the steam can be got up with petroleum as compared with coal—namely, in the American experiments a pressure of twenty pounds was obtained in 28 minutes as against 60 minutes by coal. This, however, is a matter of small moment in an ocean going steamer; and if requisite, furnaces can be so constructed as to get up steam very quickly with coal; steam fire-engines, for example, get up steam to a working pressure as they are running to a fire.

It would certainly be a consummation most devoutly to be wished for, that the profitable employment of petroleum for making steam be demonstrated beyond a doubt, and we would throw no obstacle in the way of such a result; but we conceive that we are doing good service to all parties in placing before them whatever information can be obtained from any source, regarding the uses of this comparatively new article of commercial industry, even though it should seem to be against its introduction into more extended channels of trade.

The World as a Place to Live In.

Many people seem to take a strange pleasure in decrying this life, as unworthy of their notice and unfit for their enjoyment. They forget that, for each of us, the world is very much what we choose to make it. They fail to remember that this is the very world created for man, adapted to his needs with consummate skill, and introduced to his notice as a residence eminently fitting. The Creator at its completion "saw that it was good." They are so irreverent and presumptuous as to insist that it is bad.

But, then, the world is unsatisfying and full of disappointment. Of course, we would not wish to have it otherwise. No material blessing is a permanent pleasure. The sweetest sleep is but for a night. The most acceptable dinner only appeases the hunger of a day. And this beneficent arrangement not only gives us a succession of dinners and dreams, but opens a way for the discipline of wakefulness and hunger, a discipline to which we owe more than we would like to acknowledge. Then, too, our plans are sometimes defeated, our noblest efforts fail of accomplishing their purpose. Be it so, in the name of all that is manly. Richly dowered as we are, we can afford an occasional defeat. Nay, more, we cannot afford to do without it. Ultimately, as a general thing, success follows desert. It is the uncertainty of each individual pursuit that gives it zest. When we fail we can make of the failure a pedestal upon which to stand while aiming at a loftier achievement. God has not taken so much pains in framing and furnishing, and adorning this world, that they who were made by Him to live in it should despise it. Why then do we disparage it? For its wickedness? It shall teach us a loftier virtue. For its deceit and treachery? It shall make our frankness beautiful. For its poverty? No, truly; for it has given us very much that money could not buy. This very wickedness, and deceit, and poverty, are needful ingredients in the soil from which the noblest fruit must grow. For our purpose the world does not contain too much. Let us take heed that it find not its only "superfluity of naughtiness" in ourselves.

A Successful Editor.—Mr. Lloyd, of Lloyd's Weekly Times, published in London, not only owns his own paper mill, but has leased several hundred acres of land in Algiers, on which is grown the Spanish grass of which he makes paper. The circulation of the *Times* is nearly 500,000 weekly, and its proprietor is immensely rich.

Heavy Mail.—Forty thousand soldiers' letters, weighing more than six tons, were forwarded North from Washington on the 17th and 18th of June.

Habits of Eating.

The most common way to a premature grave and one of the shortest cuts to that destination, is down a man's throat. There is a multitude, which no man can number, daily eating immoderately, thus sapping the constitution, and laying the foundation for innumerable ills, and a too early grave. The wise man does it and the fool; the virtuous and the abandoned; the kind and cross of all climes, are among the errorists. But there are some who are wise as to this point, and the number is increasing: the number of those who are men and women of force, who think for themselves, who have vigor of intellect enough to compare causes and effects, antecedents and consequences. There is constantly coming to us the knowledge of mothers, who have been led to regulate their households rationally, and are reaping a rich reward in the shape of health for themselves, and increasing health for their children.

The first point in the philosophy of eating is to perform that very necessary business with the greatest regularity. A young Scotch trapper, Thomas Glendy, told us thirty years ago, that the Indians, with whom he had been hunting, ate but once a day, and that was early in the evening; that then, a single individual would consume several pounds of meat, smoke his pipe, lie down to sleep, get up by the dawn, hunt all day, and eat nothing until evening. An old beau of Washington city took it into his head that eating was a trouble, and that he would perform that process but once a day. On occasion of his being invited out in the evening, he felt compelled to take something, although he had eaten his regular dinner; but then he would eat nothing at all the next day. These irregularities were very rare; he died when nearly eighty years of age, a sprightly, gallant old beau to the last. On the other hand, persons who are regularly irregular, seem to live a good while. Capt. Hall lately stated to the Historical Society, in New York, the case of some Esquimax, who, being carried to sea on a cake of ice, ate nothing for the space of thirty days, when each man swallowed about thirty pounds of meat and oil, and neither died nor bursted up. But observation has shown, that both as to man and beast, regularity in the hours of eating is indispensable to a healthy thriving condition. Most articles of food require several hours to be placed in a condition to be passed out of the stomach; and if a new supply of food is introduced before this process of digestion or conversion is completed, the former food is not passed out until the latter has been brought to its own condition; the result of its being kept warm so long is that it begins to decay, gas is generated, and the whole mass is corrupted. Those who eat often and eat between meals, always have wind on the stomach: but if it cannot escape, it causes a feeling of oppression, and this is dyspepsia, that horrid hag which has a thousand ills in her trail. Half "the girls" have dyspepsia, before they are seventeen, in consequence of their everlasting nibbling at everything eatable in the house. The most natural and healthful times of eating would seem to be at daylight, noon, and sundown; the last meal being very light indeed.—*Hall's Journal of Health.*

No Waste in the Universe.—What an economist is nature, so made by God! She economizes even the light she so immensely possesses; catches it in the moon as a candle, after the sun has gone down, as we say, when he is but rising on other lands; and sends it inconceivably far from us to the stars. She economizes heat, equalizing it for the life and health of the whole world, by currents in the air and ocean and of the electric fluid. She economizes water, to answer a thousand successive important purposes, in a thousand different places, with the same drop. How nicely and carefully she sifts out its minutest portions from the briny sea, to cleanse the air and revive the plants at this season, to fill the springs, paint the sky, and support all human life! How, with her mighty elemental agencies, she crumbles and bears down the barren rock from the mountains and the hills, to fertilize, for boundless and endless crops, the valley and the plain! How she makes the ashes even of the dead spring into grass, and blossom into flowers! How, applying the same economy to crude mineral, from the very gravel in the ground she distils a curious, delicate wash to protect the tender stalks of the growing grain; though you may not think what perhaps cuts your hand to bleeding in this varnish of flint.

How she saves every hair, particle, nail-paring, and exhalation, to turn it to some account! How she converts ice, and the snow that manures the poor man's ground, into harvests of corn and wheat! How she nourishes her *vegetable* offspring, so that her *animal* may not die of hunger? The roots of a shrub, thirsty for a supply that had been drawn aside by an artificial channel, have been known, in their resolution not to be defrauded, to find their way to the aqueduct under ground, and bore a hole through its soft wooden plug, that every fibre might drink its fill, as was divinely intended. To one who looks with a careless view on Nature, it seems as if everything with her were in extravagant excess. We quote the line about "many a flower born to blush unseen," and we talk of the floods that are poured away to no purpose. But a close inspection corrects this error, and shows how frugal her utility and perfect her order, enough, but "no room to insert a particle," however Art may rearrange her forms to educate and give scope to human power.

The Usurer Caught.—An eminent artist at Lyons, while passing through the Rue des Terreaux, approached a number of persons who were gathered together witnessing the sale of the furniture of a poor workman. A woman was seated on the pavement with a child in her arms. The painter spoke to her, and was told that the furniture which was being sold belonged to her; that her husband had lately died, leaving her with the child she had in her arms; that she had struggled hard to maintain herself by working day and night, and submitting to every privation, but that her landlord had at length seized her furniture for some months' rent which was due him. The artist was much affected by this simple recital, and inquired who was her landlord. "There he is," replied the poor woman, pointing to a man who was watching the progress of the sale; and he was recognized by the painter as a person who was suspected of having amassed a considerable fortune by usury, so that to make an appeal to his feelings in behalf of the poor widow would be useless. The artist was considering within himself what other plan he could adopt to benefit her when the crier announced a picture for sale. It was a miserable daub, which in the summer the poor woman had used to hide the hole in the wall through which the pipe of the stove passed during the winter. It was put up at one franc. The artist at once conceived a plan for taking revenge of the landlord. He went over, examined the picture with great attention, and then called out, with a very loud voice, "One hundred francs!" The landlord was astounded at the bid, but conceiving that a picture of which so eminent an artist could offer that sum, was worth more than double, boldly offered two hundred. "Five hundred!" said the painter, and the contest between the two bidders became so animated, that the prize was at length knocked down to the landlord at 2,200f.! The purchaser then addressing the painter, said, "In seeing an artist of your merit bid so eagerly for the picture, I supposed that it must be valuable. Now tell me, sir, at what you estimate its value?" "About three francs and a half," said the painter, "but I would not give that for it." "You are truly jesting," said the landlord, "for you bid as high as 2,100f. for it." "That is true," replied the artist, "and I will tell you why I did so. You, who are in possession of an income of 25,000f. a year, have seized on the furniture of a poor woman for a debt of 200f. I wished to give you a lesson, and you fell into my trap. Instead of the poor woman being your debtor, she is now your creditor, and I flatter myself you will not compel her to seize on your furniture for her debt." The artist then politely saluted the astonished landlord, and, having announced her good fortune to the poor woman, walked away.—*Lyons Paper.*

Insects and their Human Prey.—Medical writers describe no less than about twenty varieties of parasites which infest the human system. Says a recent writer: "It is a notorious fact that numerous parasites crawl over our surface, burrow beneath the skin, nestle in our entrails, and riot and propagate their kind in every corner of our frames; and scarcely a tissue or an organ but is occasionally profaned by their inroads. Each has also its parasite or special domicile, one specimen of *strongle* chooses the heart for its place of abode, another inhabits the arteries and a third the kidneys. Myriads of minute worms have been found coiled up in the muscles. A little *fluke*, very much like a miniature flounder, lives steeped in gall, in the liver. If the skin of the nose be squeezed a cheesy matter will exude, and if examined by the microscope ten to one several animalcules, extremely minute, but of a complicated structure, will be seen. They are present in the majority of living persons. It is less than one hundredth part of an inch in length, has a head, chest and abdomen, it has eight legs and very moveable jaws. It is well known that a small insect is the cause of itch; the insect, by skillful management, can be caught and seen under the microscope. It seems a strange and humiliating fact that the human body should provide food and habitation for so many and such varieties of these inferior creatures.

Thirty-five $5 gold pieces, dated 1792, have been discovered in removing an old building at Fort Ann, N. Y.

Joshua Bates and James McHenry have given $5,000 each to a United States Sanitary Fund just started in London.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Meetings, Assessments and Delinquent Sales.

Comprising the Names of Companies, District or County of Location, Amount of Assessment; Date of Meeting, Delinquent Advertisement and Sale, and the Place of Business of the Corporation if it is not in San Francisco.

REVISED EVERY ISSUE.

Advertised in the Mining and Scientific Press

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also — Eds. Press,

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

WASHOE.

THE IMPERIAL MINING CO.—From the annual report of the President of this Company we glean the following: The Alta mine is now opened to a depth of 410 feet; by actual measurement there is above water 12,000 tons of ore which will yield $35 per ton. The Holmes mine is closed at present. The Rock Point mill on the Carson river has been much improved recently, and additional batteries of sixteen stamps are to be put in, when this work is completed the mill will consist of fifty-six stamps with amalgamating capacity and capable of crushing 1,680 tons per month; the cost of reducing ores at this mill the past year, including hauling, has been $10.02 per ton. The Gold Hill mill is in good working order and is successfully reducing an average of 650 tons per month; the cost of reduction in this mill has averaged for the year $13.66 per ton. The average cost of the extraction of ores has been $9 per ton, which, however, includes an outlay of $26,500 for improvements on the Alta ground. The disbursements during this period reached $517,000, including dividends amounting to $40,000. The total indebtedness of the company on the 31st of May last was less than $30,000, since which time this has been paid. The receipts of the company the current month will, it is thought, exceed $90,000.

WE extract the following from the Gold Hill News:

THE ASTOR COMPANY are driving their tunnel ahead day and night, showing they have confidence in the merit of their claim. The indications of finding a lead before long are very good indeed. The outlay of money and the efforts of this company, will soon be rewarded. The rock continues hard, but lately it has become damp, and a stratum of fine looking quartz, recently struck, pitching to the west, indicates that the main lead is not far off. When the lead is found, an abundance of water must be struck by the great depth of the tunnel (now about 350 feet below the surface,) which will be quite a prize itself, if the weather is as dry and hot as usual here, constantly increasing the demand for it, both for our town and mills. Success, we say, to every enterprise carried on, in these times, with such determined intentions to develop our valuable mining interests. A large number of the old shareholders still hold their interests in this company, and have no great desire to sell at present low prices for good prospective claims.

THE OVERMAN company will soon be taking out pay rock again. At present it is sinking its shaft, which is now sixty-five feet below water level, and that distance deeper than its ledge has ever been worked. When chambers are run from this shaft to work the ledge, at this or a greater depth, we expect to see very rich rock taken out.

THE YELLOW JACKET company is busy running a drift from its shaft into the ledge, a long distance below where the latter has hitherto been worked. The company is also sinking an air shaft down from the old chamber in its mine to connect with this drift when it shall have come into the ledge far enough. From this shaft is being taken out some of the richest rock ever taken out by the company. When the company gets the drift in and commences working the ledge through it, at that depth, it will undoubtedly take out $60, $80 or $100 rock all the time.

THE CROESUS Company has a shaft 360 feet deep at present, which becomes about four feet deeper every day.

THE OMEGA company is putting up its steam boiler. All the machinery for this company's works will be here in a few days, and will be set as soon as possible after it arrives. It will not take long to complete the construction of the works after the engine, reels, etc., come to hand.

THE MILTON Company continues taking out the rich blue sulphuret rock, which was struck in its mine a couple of weeks ago. This rock is rich in silver. Then, besides this, there is also a ledge in the west drift of brown quartz, which produces a good deal of gold.

THE SAVAGE Company has got its new shaft sunk to the depth of 158 feet. It is being carried down very rapidly. The donkey engine which is used to do the hoisting, works admirably. There is no water in the ground to give trouble in working, and will not be until the shaft is sunk down below the level where the mine is now being worked.

THE DEWITT CLINTON is taking some very good looking ore from its claim. Several tons have been taken out through its tunnel, and now lies beside the track on the dump. We know not how large the vein is from which the ore is taken. No person is admitted into this claim without permission of the Superintendent.

THE KEYSTONE Company is at work again on its claim. A drift is being run to the ledge and has been driven about thirty feet from the shaft in that direction. It is being run in very hard rock, and can be driven ahead but slowly. There has been no water struck in the shaft or drift yet, although they are both lower than the water level as it stands in several of the claims near by.

THE MINERVA Company has received its steam boiler and smoke stacks, and the engine and other machinery necessary to have to put hoisting works into operation is on the road and fully due at the mine. The engine, is of sixty horse power, and the other machinery to match.

THE YOLO Company has been driving work ahead with great activity for the past few months, and does not let up at all for the present hard times.

THE HALE & NORCROSS Company are putting up their two new engines with all convenient dispatch. The smaller of the two is 60 and the larger 100-horse power. When this new machinery is put to work the company can sink down three or four hundred feet deeper, and all that distance will probably find as rich or richer rock than has yet been taken out of the mine. The ledge is now opened and worked to the depth of about 400 feet. The greater part however would not pay, but hereafter every foot of the ledge is expected to pay largely.

THE OPHIR suspended operations in its main shaft some time since, on account of water, and are now running a drift from the Central Engine Shaft to draw the water from the same. The water is now 50 feet deep in the shaft, and the drift from the Central will relieve it until they complete the construction and erection of a powerful pumping and hoisting engine for that shaft now under way. Work will be renewed again, and prosecuted without farther interruption when that work is completed.

THE CHOLLAR COMPANY which broke the main shaft of its hoisting works, a few days since, has sent to San Francisco for a wrought iron one. The old one was of cast iron. The accident will not only throw a large number of workmen about the mine out of employment, but will probably greatly inconvenience the various mills depending on the mine for a supply of ore for crushing.

CALIFORNIA.

YUBA.—The Marysville *Appeal* of the 16th says that mining progresses steadily at Brown's Valley—stock being firm, and speculation at a dead lock. The Sweet Vengeance Co., the past day or two has been exchanging engines, the original machine being a little weak in the back for the amount of labor imposed upon it. The mill will be running again in a day or two. The Jefferson is going into the bowels of the earth, and hauling out good quartz. The Pennsylvania mill is running this week on its own rock, which is good. At present they do not get out rock sufficient to keep running for themselves, and the spare time is put in on custom work. They will run next week on Yuba rock, which is paying us well, we are informed, as any in the District. The general aspect of mining in the Valley is encouraging.

The same paper of the 20th says:

The Jefferson last week produced $4,700; the Donnehoge, about $2,000; and the Pennsylvania an amount made known to its stockholders. We understand, however, that the rock crushed was of the first quality. The Sweet Vengeance Company is still quiet, the new engine not yet being in place. The business of the town is lively, and Brown's Valley, like the Brown family, is marching on.

NEVADA COUNTY.—We clip the following items from the Nevada *Gazette*:

Mr. Robert McCutchan discovered a vein of rich quartz on Little Wolf creek, near the Canada Hill mill, which he supposes to be an extension of the old Canada Hill lead, the trace of which has been lost at the crossing of the creek. He is having several tons of the rock crushed at the Canada Hill mill, and has obtained from the coppers alone $22 to the ton. It will probably yield not less than $50 per ton when the pans are cleaned up.

QUARTZ MILL AT DIAMOND CREEK.—Mr. Oscar Palmer, of this city, has recently constructed a quartz mill at the head of Diamond Creek, near Omega, in this county. It is an eight-stamp mill, with two of Williams' pans. The ledge is supposed to be a very fine one. It is from two to four feet in width, and so far as prospected will pay from $30 to $50 per ton. The mill is a tip-top one. Mr. Palmer thinks the country in the neighborhood of this mill is full of gold bearing quartz.

The *Gazette* of the 19th says that W. H. Weeks & Co., of Gold Flat, near Nevada, cleaned up at their mill last Saturday, after a two weeks run, crushing 70 tons of rock, $2,400.

THE Downieville *Messenger* says that a great quartz excitement has broken out at Port Wine, some very promising samples of rock having been found a short distance from town.

COAL has been discovered near Salt Lake City, and the article is selling at four dollars per ton!

REESE RIVER.

We condense as follows from the *Reveille*:

BELLE SHIELS.—The Belle Shiels is one of the most convenient claims for examination in the district, being in the city. The shaft is now down more than sixty feet, with a good ledge upwards of a foot in width and producing ore of a very excellent quality.

LOUISIANA LODE.—An incline has been sunk to the depth of thirty feet, finding a well defined lode. The Louisiana is located on Lander Hill.

THE CAMARGO ECLIPSE.—The Camargo Eclipse is on Union Hill, Marshal Cañon, and supposed to be on the same ledge as the Union No. 2, and Eclipse. An incline is now down one hundred and five feet deep where the ledge is between two and three feet broad. Some excellent rock has been taken from the claim.

THE SMITH AND MARTIN LODE has produced exceedingly rich rock near the surface. They are now down 116 feet. We expect that when water is reached some remarkable rich developments will be made.

THE MAGNOLIA is one of the oldest locations on Austin Hill and comprises 420 feet. The claim has been thoroughly prospected and its value is established beyond a doubt. An incline of upwards of eighty feet in depth has been sunk, finding rich chloride rock in its whole course. The claim will now be opened for working by a shaft, now in course of construction, that will be the finest piece of mining workmanship in the district.

Furnace for Roasting Pyrites.

The object of this invention, which has been patented by M. Gerstenhofer, of Freiberg, Germany, is to effect in an economical manner the roasting of crushed pyrites, for the purpose of driving off the contained sulphur therefrom prior to its conversion into sulphuric acid. "To this end," says the inventor, "I construct a furnace or set of furnaces, into which the crushed ore is continuously supplied, and in passing through which it is effectually exposed to the furnace heat, whereby the rapid volatilization of the sulphur is effected. The furnace may be described as a vertical chamber constructed of fire bricks and fitted with a series of horizontal bearers (formed of fire-brick) distributed evenly through the body of the furnace for the purpose of intercepting and thereby distributing the crushed ore as it is discharged through the top of the furnace from suitable feeding boxes. The boxes are provided with girds for arresting the descent of large pieces of ore, and the supply is equally maintained by means of rotating feed rollers mounted in the feed passages in the roof of the furnace. The upper face of the bearers is made flat to receive the ore, and in accumulating on the upper bearers it slides off on to those lower down, and so on until it finally falls to the bottom of the furnace, at which time it is supposed to have parted with its sulphur. In a line with these bearers stoppered openings are provided in the front wall of the furnace for cleaning the bearers if they should become clogged. Their rear ends rest on a hollow partition wall which divides an air-heating flue or chamber from the furnace proper. This chamber is provided with a series of horizontal air pipes, the upper one of which is connected with the upper end of a vertical flue in the partition wall and the lower end with a flue in connection with a cold air chamber built below the furnace. This cold air chamber is fed by a blower or other suitable means, and is made capable of discharging air either into the furnace directly or into the air pipes. Level with the floor of the furnace is an opening closed by a door for withdrawing the burned ore, and a little way above this opening, a removable grate is fitted for heating the furnace. The temperature of the furnace having been raised to the desired point by the consumption of fuel on this grate, the grate is withdrawn, and the opening that admitted it, closed. The crushed ore is now supplied to the furnace, and air is forced through the system of pipes and flues described, until it enters the furnace below the fire-brick bearers. In its traverse it becomes heated, and flowing up the furnace carries off the sulphur fumes. The mingled gases then descend the air chamber before mentioned, heating in their descent the pipes containing the fresh supply of air. The gases then pass off to a large chamber where they deposit the dust which they have carried over prior to being conducted to the sulphuric acid chambers."

FREE MASONS may be curious to know their strength in the world's population. From very accurate statistics, we can state that in the New and Old World there are 8,258 lodges, with 400,000 active members. The number of non-active and those who have withdrawn is nearly 3,000,000.

NOTWITHSTANDING the immense production of quicksilver at the Almaden and other mines in this State, the article is imported from the East.

Middle Life.

It is perhaps with some shade of sadness that one comes to rank himself in middle life. Slowly it dawns upon him, reluctantly he admits it. It is no sense of growing old that touches him, no flagging of the powers of the spirit, not even the taunt of that opprobrious epithet now-a-days flippantly flung at middle life—for the *fogy* is not the old, but the middle-aged man; but one finds that, with the fuller flesh, and firmer muscle, and stronger tread, and truer poise of his faculties—while yet his sympathies are all young and fresh, while yet he waits to follow where older and wiser lead—the world waits and looks to him—pushes him forward where he hesitates, until he discovers, that no longer looked upon as young, he must take his place in the toiling and exposed van, and hew the way in which other steps shall tread.

The character of middle life is the character of the man. It is that by which he is known, that by which he makes his mark, that by which he does his good or evil; it is the character he carries with him into age and into the dread presence of his Maker. Middle life makes for us what God himself could not give. The bright visions of youth are past. Sorrows, disappointments, griefs, have overtaken us, and we are made to see how solemn and how real a thing it is to live, how vain and weak and ignorant is the unsupported soul of man. Amid trials and toils, the attendant witnesses of a Father's discipline and oversight, amid defeats which each day testify to our insufficient principle, our advancing years lend us. Shall all this pass us as the breeze passes the wheatfield, leaving it standing and smiling as before? Shall we not have gained some steadiness, some stateliness of character, some other reverence than ourselves, some other dependence? Shall the old frivolity still cleave in us—the garb of childhood on the frame of man—the old love and pursuit of pleasure—the old, often vanquished, self-confidence? Shall we be growing into years with all the frippery of childhood lingering about our hearts, our manners, our hopes, our attainments? Not so, middle life is for better things; for the casting off of the childish and unworthy, for the putting on of the whole man, even of the man after Christ. Saddest of all sad sights, is to see the probation of a human soul wearing towards its noon, while no deepening tinge to character proclaims the ripening within, while all things say how closely and wilfully it clings to its grosser delights. Old age is not of necessity, beautiful. All do not know the secret of the art of growing old gracefully. It is an art which middle life works at and perfects. The secret lies back there. Serene and waiting and beloved age is the result of honorable and virtuous middle life; and age, querulous, exacting, burdensome to itself and others, is the product of selfish, frivolous middle life.

A NEW discovery, or rather application, of photography has been made by W. S. Shirras of Aberdeen, Scotland, who is busy transferring photographs from paper to china. The portraits are quite perfect. We may now expect to see household tea-services adorned with the likenesses of our friends.

A HEAVY HAIL STORM visited Indian Valley in Washington Territory, lately, the hail falling to a depth of four inches. Barley and oat crops were beaten down level with the ground. One ranch was damaged to the amount of some $6,000.

IN Austin, Reese River, one hundred and eighty houses have been built since January last, at a cost of $365,645. If times are dull over there, Austin improves almost as fast as Sacramento.

THE Nevada Constitution, if the people adopt it, will allow the Legislature to issue $3,000,000 worth of bonds and give them to the Pacific Railroad, the company to expend the amount within the bounds of Nevada

SANITARY.—At Howland Flat, the letter of Dr. Bellows, acknowledging the first remittance was handsomely framed and sold at auction for $302 60. Howland Flat has contributed to this noble fund, $2,095.00.

LEARN how to pursue true success from the blind man, who never makes a step without first examining the ground with his staff.

THERE is a machine in Bangor (Me.) for planting potatoes. It opens the furrow and cuts, drops and covers at the same time.

THE Rothschilds it is said have made arrangements to purchase all the Italian railways.

STANTON is said to be perpetrating an official history of the war in sixty volumes.

THE total cost of the monitors built and being built, will be about $22,150,000.

THE "original pop-corn man" of Springfield, Mass., has been drafted.

Mechanical and Patent Department.

WORKING STEAM EXPANSIVELY.

So much interest is being taken, at this time, in the theory of working steam expansively, that any information, tending to throw more light upon the subject, cannot fail to be interesting to every intelligent reader. Some time since, government appointed a commission to initiate a series of experiments for the purpose of fully and fairly testing the theory. It is now about one year since this commission was appointed, and at the latest dates from New York we are told that up to that time nothing had been done, except to decide upon the method, and prepare the apparatus for conducting the experiments. The preparations are almost completed. They are to be conducted in a building on Fourteenth street, New York.

If we are not mistaken, the Engineer in-Chief, of the navy, has pronounced decidedly against the expansive use of steam, and the principle is strictly ignored by that department. The commission above alluded to, owes its origin, we believe, to a conviction on the part of many practical engineers, both in the navy and out of it, that the Chief Engineer has been too hasty in his decision, and that the experiments upon which that opinion was founded were not properly conducted. It is also more than hinted that ignorance or perverseness with regard to the proper and economical use of steam, is the great secret of the ill-success of our navy, in its efforts to rid the ocean of the rebel privateers, which have been, and are now, working such sad havoc with our mercantile marine.

It moreover appears that while the government has been pushing its slow coach in this direction, private enterprise has intervened, and actually solved the problem by a practical test on a large scale. Some New York capitalists have built a steamer of two thousand tons burthen, working on the expansion principle, known as the *Foh Kein*, and placed her in the Chinese waters, where she has had an opportunity to try her powers with a rivil steamer, the Kir Shan, owned by another Company. The two steamers started at the same time from Whampoa, for Hongkong, a distance of about eighty-five miles. The Foh Kein made the distance in four hours and forty-five minutes, beating her rival some eight or ten miles in the race, and averaging about 17½ miles per hour, a speed superior to the average made by the Sound steamers, between New York and Fall River, and using only forty per cent. as much coal. She carried from twenty-six to thirty pounds of steam, cutting off at two feet six inches, making twenty-four revolutions per minute, and burning only one and three-fourths tons of coal per hour. The cut-off arrangement is said to work beautifully. This is considered a great triumph of the expansion theory. The result of the government trial in New York will soon be made known, and we propose giving a full report of the same in the columns of the Press.

New Method of Illumination.—M. Subra, professor of mathematics, has invented a new method of illumination, or rather a method of inverting flame, by the adoption of which several advantages are expected to be realized. The apparatus consists of a syphon of glass, the open ends of which are turned upwards; a burner is placed just within the shorter branch. Before lighting the lamp, the longer branch of the syphon is heated, and a current of air established, which carries with it any flame placed at the open end of the shorter branch, the flame, consequently, becoming inverted. As soon as the current is established, and the burner kindled, the heating of the longer leg may be discontinued, the current once established, being sustained by the heat from the inverted flame. The advantages of this new arrangement are as follows: The supports of the globes or lamp-glasses are placed above the flame, and do not intercept the light; the reflectors, also, are in no danger of becoming blackened by smoke, and they collect rays that otherwise would be lost in the air. The flame has a more elevated temperature on account of the heat being concentrated by the syphon, and the carbon consequently more incandescent. The products of combustion are collected in the syphon, and may be conveyed away, instead of vitiating the air of the apartment. It is proposed to employ these reversed flames as foot-lights for theaters, the advantages, such as safety, &c., being obvious.

Induration of Iron.—The iron work of the new bridge at Blackfriars is to be indurated by a process patented by Messrs. Morewood & Co., and is alike important from the great cost which will be incurred, and the testing of a rather abstruse chemical formula for the preservation of iron from oxidation and decay. The process is as follows:—"The iron is to be thoroughly cleaned, and heated to the requisite temperature in a furnace planned by the inventors. When this temperature is attained, it is to be plunged into a bath of prussite of potash and chloride of potassium, in a molten state, so that when the iron is withdrawn it may easily part with the surplus of the aforesaid chemicals, which should run off like oil. The iron is then to be dipped into boiling water, containing a certain proportion of cyanide of potassium; from thence it is removed to a bath for a final washing, and set up on end to dry. All the processes are to be carried on under cover, and before exposure to the atmosphere the iron is to be coated with an asphaltum paint twice, at given intervals; and again it is to receive two coats after fixing. Of course, all the necessary planing, drilling, and fitting is to be done preparatory to the indurating. The time the iron is to remain in the bath will vary from one to five minutes, according to the weight of the metal to be operated upon. The elaborate character of the process to which the contractor is rigidly bound, will account for the large sum to be expended in carrying out this part of the work; £4 per ton is allowed to the contractor for the induration and painting; Messrs. Morewood will receive from the contractors 5s. per ton as their royalty, which it is estimated will be £1,000. Thus £16,000 is to be spent in this effort to prevent oxidation, no greater proof of which, in its damaging results, can be offered than the case of the cleaning of the oxide (or rust) from the Menai Bridge, from which has lately been removed about 40 tons of oxide of iron."—*London Mechanics' Magazine.*

Mode of Silvering Wood.—Take strong alcohol or spirits of turpentine in a glass vessel, and add to it a piece of phosphorus (a common corked vial will answer the purpose); the vessel must now be placed in hot water for a few minutes, and occasionally shaken; by this means the alcohol will take up about a three-hundreth part of its bulk of phosphorus. Next procure a weak solution of nitrate of silver, place it in a flat dish or saucer; the face of the wood must now be dipped in this solution, and let it remain a few minutes to allow capillary attraction to draw it into the wood. This operation being performed a small portion of the solution of phosphorus must be placed in a capsule or watch-glass, and this placed on a sand-bath that it may gradually evaporate. The wood must now be held with its surface over the vapor, and an immediate change takes place; the nitrate of glass is decomposed, and gives place to metallic silver. When the material to be acted on is not very large, fasten it to the top of a bell-glass receiver, with a bit of pitch or cement, and placed thus over the capsule on the sand-bath; the phosphorus vapor is by this means equally diffused, and not dissipated. A solution of phosphorus in sulphuric ether also answers; and a solution of gold (chloride) may be used. This elegant process as applied to wood and those substances which may be wetted with the solution of nitrate of silver, answer perfectly; but it is obviously limited in its application to those substances which will absorb an aqueous solution.

Patent Fishing Lamp.—A Mr. Fanshaw, of England, has invented a patent lamp for fishing, which is thought by practical fishermen to be of great value. It is a well known fact that light has a great attraction for fish, and that fishermen therefore use it to allure them toward their nets. But these have always been placed on the top of the boats. By Mr. Fanshaw's invention, a lamp can be let down some twelve feet or more into the water, and so allure the fish to a greater depth than has hitherto been practicable.

The fisherman on the Rhone, have long been accustomed to wade into the water at night with a knife and a water tight lamp. They place the lamp under water, and the trout will soon follow it. As the fish come up to the surface of the water, the fisherman kills them with his knife.

A Chance for Inventors.—It is said that 1200 dozen of eggs are used every week, in New York and vicinity, for albumenizing paper for photographs. It has been suggested that chemists should turn their attention to devising some economical method of separating the albumen from the blood of animals slaughtered for the markets of that city, by which this enormous loss of hen fruit might be avoided, and a great waste in another direction be turned to profitable account.

Portable Breastworks.—Edward Fay, of this city, says the Petaluma *Argus*, has exhibited to us the model of a portable breastwork which he designs bringing to the notice of military men. It is placed upon two wheels, and is designed for the protection of infantry, each section affording ample protection to four men, either in advance or retreat movement. It is certainly an ingenious contrivance, and one that in many cases could not fail to be of practical utility; but whether or no it could be rendered sufficiently general in its use to entitle it to a place among the munitions of war, of course we are not qualified to decide.

Every one will recollect the facility with which hemp bales were extemporized into portable breastworks at the siege of Lexington, Missouri, in the early part of the war, and the efficiency with which they were used on that memorable occasion. There can be no doubt but that such means of defence might be made of great advantage under certain circumstances.

English Appreciation.—Two officers of high rank in the English navy were recently sent across the Atlantic to enquire into and report upon the merits of the American monitors. It is now stated that these gentlemen have recommended to the English Admiralty the adoption of three of the principal features of our iron-clads, neither of which has as yet entered into English naval architecture, viz:—the Erriesson turret, the compressors used in working the heavy guns carried by our monitors, and the ventilating system adopted by our iron-clads.

The Human Heart as an Engine of Mechanical Power.—A learned German professor says that the human body viewed as a calorific engine simply, is capable of doing much more work in comparison with the fuel consumed, than any steam engine ever constructed. The pulsations of the heart in one hour generate a force which would raise that organ 22,000 feet high in a certain time, while the same amount of heat in the best constructed engine could not raise the weight of the engine more than 2,700.

A New Alloy, described as applicable to the manufacture of all metal articles, bells, hammers, anvils, rails, and non-cutting tools has been patented by Mr. M. H. Mieolon, of Paris. The alloy consists of iron with manganese or borax. The patentee takes 20 parts of iron turnings of tin waste, 80 parts of steel, 4 parts of manganese, and 4 parts of borax; but these proportions may be varied. When it is desired to increase the tenacity of the alloy, 2 or three parts of wolfram are added. When the cupola is ready, the iron and steel are poured in, and then the manganese and borax; finally, the vessel is filled up with coke; the metal is thus in direct contact with the fuel in the cupola, and by quickly running the fused mass into moulds, bells which possess the sonority of silver, while the cost is less than bronze, may be obtained.

Condensation on the Surface of all Solids.—Professor Magnus describes in *Poggendorf's Annalen* a series of delicate experiments made by him, from which he concludes that all substances, however different they may be, are raised in temperatures when air comes in contact with them which is moister than that surrounding them; and that they are depressed in temperature when they are exposed to air which is dryer than that by which they are surrounded. The most various vapors condense on the surface of solid bodies in such quantity as to cause an appreciable elevation of temperature; (and from this it follows that) at all times there is at the surface of bodies a layer of condensed vapor, which is larger or smaller according to the hygrometic state of the atmosphere.

Improved Pump.—Captain Harrison, the veteran Mare Island Pilot, has received from the Patent Office, at Washington, letters patent on the different improvements embraced in his caveat upon his "Eccentric Pump," an invention of great practical value to ship owners and miners requiring powerful pumping apparatus. This pump was fully described and illustrated in the Mining and Scientific Press of

Prince Alfred is very popular in England, more so than the Prince of Wales. He has a mechanical turn, and indulges in a lathe which he works with great skill. He plays on the violin and harmonium, smokes with grace and among his companions is a prime favorite.

An Ounce Weight and a Tun Weight.

An ounce weight and a tun weight of iron will fall down a pit with equal speed and in equal time. Until about 300 years ago, all the learned men in the world disbelieved and denied it. Galileo, an Italian taught the contrary to the popular belief. The University of Pisa challenged him to the proof. The leaning tower of that city was just the place for such an experiment. Two balls were obtained and weighed, and one was found to be exactly double the weight of the other. Both were taken to the top. All Pisa looked on, and crowds of dignitaries were confident that young Galileo, then obscure and despised, but honored and immortalized now, would be proved to be in error. The two balls were dropped at the same instant. Old theory and all the world, said that the large ball, being twice as heavy as the less, must come down in half the time. All eyes watched, and lo! all eyes beheld them strike the earth at the same instant. Men then disbelieved their eyes, and repeated the experiment several times, but each time with the same result. The little ball was big enough to destroy a theory of 2000 years old; and had it been little as a pea, it would have destroyed it just as well, or even more quickly.

But how was this? Did not the earth draw down the large ball, which was double the weight of the smaller, with double force? Yes, truly; but in drawing down the large ball there was a double force of resistance to be overcome, and as the two forces acted in given proportion on the large ball, and in the same proportion on the less, the velocity of the two was equal, though in bulk they were unequal. Let us suppose there was to be two wagons, one with a load of five tuns, and the other ten tuns, and that the unequal loads are drawn by an equal horse power—should not their speed be equal, though their weight is unequal? No. There must be a double horse power to draw the double weight, to obtain equal speed. Let a ten-pound weight and a one-pound weight fall at the same time, and the earth must draw down the heavier weight with ten times greater force that they may have equal speed, and it does so. A tun weight of iron, and an ounce weight, leaving the top of a pit, at the same instant, would, therefore, at the same instant fall to the bottom.

The Barometer.—Many private persons consult the barometer, and see it daily, and are surprised to find that they cannot rely on its indications, especially on those of the unscientific wheel barometer, with a face like an underdone clock. The fault, however, is not with the instrument, but with those who use it improperly; "th' ap'ratus," as Salem Scudder observes, "can't lie." A few words on the practical use of the weather-glass may be useful. It is an invaluable fact, and too often overlooked, that the state of the air does not show the present but the coming weather, and that the longer the interval between the barometric sign of the change, and the change itself, the longer and more strongly will the altered weather prevail; so the more violent the impending storm, the longer warning does it give of its approach. Indications of approaching change of weather are shown less by the hight of the barometer, than by its rising and falling. Thus the barometer begins to rise considerably before the conclusion of a gale, and foretells an improvement in the weather, though the mercury may still stand low; nevertheless, a steady hight of more than thirty inches is mostly indicative of fine weather and moderate winds.

Either steadiness or *gradual* rising of the mercury indicates settled weather, and continued steadiness with dryness, foretell very fine weather lasting some time. A *rapid* rise of the barometer indicates unsettled weather; a *gradual* fall of one-hundredth of an inch per hour, indicates a gradual change in the weather and moderate rising of the wind; several successive falls to the amount of one-tenth of an inch, indicate a storm *eventually* but not a sudden one; and a gale if the fall continues. These storms are not dangerous, as they can be foretold; but a sudden fall one-tenth of an inch betokens the quick approach of a dangerous tempest. Alternate rising and falling (oscillating) indicates unsettled and threatening weather. When the barometer sinks considerably, wind and rain will follow—from the northward, if the thermometer is low for the season; from the southward, if high. For observing barometric changes, the barometer should be placed at the eye-level, out of the reach of sunshine and of artificial heat, as of fires, and out of the way of gusts of wind. It should be set regularly twice a day by a competent person. A card should be accessible close by, and on it should be registered the indication at each setting.—*Chamber's Journal in Littell's Living Age.*

At a recent wedding in Arizona the bridegroom was in his shirt-sleeves and the bride in her morning dress. The census-taker performed the ceremony, and a great bucket of rye whisky furnished the staple of the wedding feast.

Theory of the Origin of Coal Oil.

It is probable that all instances of solid bitumen found on or beneath the surface of the earth have resulted from the hardening of drops or reservoirs of liquid coal oil. The lumps and crystals of graphite found in the oldest rocks, like the lumps of amber found in the newest, were doubtless oily substances evolved by sand and mud. Flakes of anthracite are found in the center of rock crystal. Gelatinous animals and fucous plants abounded in the ancient seas, and ought to have provided, by their death, plenty of animal and vegetable hydrocarbon for the mineral. The old red sand stone, like more modern formations, presents us, for our cabinets, innumerable flattened fish, converted into bitumen; some in so perfect a state that every scale can be counted, and every sculptured line upon them submitted separately to the microscope; others an undistinguishable mass or daub of tar. Some rocks have been so thoroughly charged with animal dead matter that they emit a fetid odor whenever struck, and are technically known as stinkstones. The bituminous limestones and shales of many different geological ages are so many reservoirs of animal and vegetable oil, produced by the death and slow decomposition of successive floral and faural creations, perhaps principally coralline. The fossiliferous black shales of the central belt of the State of New York underlie Lake Erie, cross Ohio and Kentucky into Tennessee, and return through Indiana and form the beds of Lakes Michigan and Huron. In middle Kentucky the faces of the rocks are smeared and streaked with oil, fried out of them by the sun, so that the surfaces are blackened as if with tar.

Up to the horizon of these black slates, ascending in the column of deposits, gelatinous sea organisms, both animal and vegetable, seem to have constituted the principal, if not the sole, apparatus for generating petroleum. But Dawson has lately discovered in the sandstones over them a true *angiospermous* (having seeds enclosed in a pod) *exogenous* (growing by successive additions to the outside of the wood) tree, not much, if any, lower in the scale of development than those of which our forests are composed. Coniferous trees began also to abound, and coal beds to be deposited in groups. Thence the higher we ascend towards and through the second and the third or great coal measures, the more abundant become the vestiges of fresh water and land vegetation, until in the tree stumps of the coal beds of Nova Scotia we find small land animals. The mosses and ferns, the rushes and reeds, minute and gigantic, of which the coal beds came, suggest the vegetable origin of coal oil. For it is near or between the three systems of coal measures which succeed each other in ascending from the top of the upper silurian to the coal measures proper that the amazing discoveries of subterranean reservoirs of oil had taken place. It is impossible to suppress the suspicion that petroleum is a product of the slow decomposition of vegetable tissue.

But the oil wells are not sunk in coal measures, but through them at the edge of the great coal area. The oil is never found in coal beds; nor have the subterranean reservoirs of oil apparently any connection with coal beds, nor even with coal slates, or bituminous shales or pyroschists, as they are called. Black slate, cannel, fat coal, like lignite, peat and living wood, will yield the oils and gases by distillation, but the geological distinction must be carefully preserved between the free petroleum of the rocks and wells and the distilled petroleum of the old oil works.

The connection of the oil regions with the coal basins of western Pennsylvania and Virginia, eastern Ohio and Kentucky, is, in good measure, a geographical deception. The oil creek rocks, dipping southward, pass 500 or 600 feet below the coal measures. The nearest coal bed to the more northern springs occurs on the highest hill-tops, many miles away. The hills in the vicinity of some of the wells are capped by the conglomerate base of the coal measures at least a hundred feet thick. The shales and sandstones of the valley belong to formations X, IX, and VIII descending, called by the New York geologists the Catskill, Chemung, and Portage groups, extending over all the southern counties of western New York. The southern dip carries down these oil-bearing rocks, and the wells must deepen in the same direction. Mr. Ridgeway reports (July 10, 1862) the lowest oil-bearing sand rock, as capping the hills near Waterford, on Le Boeuff creek, and the same sandstones appear on Big French creek, full of plant remains.

That there is an intimate connection between the character of these sand formations and the character of the oil which issues from them is indubitable. The rule among the miners is, as stated by Mr. Clark in the "Proceedings of the American Philosophical Society," (June, 1862, page 57,) that the harder the rock may be to drill, the lighter in color, purer in quality, and smaller in quantity, will be the oil obtained therefrom; and the softer the rock, the darker and more abundant the oil.

The chemist of the Canada survey, Mr. Hunt, insists strenuously upon the distinction between lignitic and bituminous rocks, inasmuch as some have been disposed" he says, "to regard the former as the source of the bitumen found in nature, which they conceive to have originated from a slow distillation. The result of careful examination of the question has, however, led us to the conclusion that the formation of the one excludes more or less completely that of the other, and that bitumen has been generated under conditions different from those which have transformed organic matters into coal and lignite; and probably, in deep-water deposits, from which atmospheric air was excluded."

Mr. Hunt instances in support of this view, the fact that the highly inflammable pyroschists or black slates of the Utica and Hamilton groups contain no soluble bitumen, and that the Trenton and corniferous limestones at the base of the silurian system are impregnated with petroleum, and give rise to petroleum springs, although no fossil land has been found in them. The fact that a considerable portion of the tissues of the lower marine animals is destitute of nitrogen, and very similar in chemical composition to the woody fiber of plants, forms another link in the chain of reasoning on this distinction between bituminous and lignitic rocks. The black slates, and even the coal beds are, in fact, layers of mud, charged slightly or to excess with lignitic matter, peat, or humus, part of which has assumed the form of glance coal and part the form of mineral charcoal, but almost none of which is soluble in benzole or sulphuret of carbon; whereas these liquids easily dissolve out the ready-formed bitumen from the rocks which may contain them. But whenever a coal bed became a repository of dead fish, like the eight-foot coal at the mouth of Yellow creek, at the bend of the Ohio, or as in the case of the two-foot stratum of phosphatic iron-ore deposited between the two benches of the Deep River coal-bed, at Egypt, in North Carolina—how different an aspect the mineral then wears, glossy with soluble bitumen!

Mr. Hunt argues with much force that the mere fact that intermediate strata, porous enough to absorb all the floating bitumen in their vicinity are nevertheless destitute of any, is enough to prove that the accumulations of oil now furnishing the world with light, never came from the sub-volcanic distillations of the beds of coal in their neighborhood, but that the mineral has been generated by the transformation of organic matter in the strata where it is. Mr. Wall has shown that the asphalt of Trinidad and Venezuela (belonging however to a much later—upper miocene or lower pliocene—tertiary age) occurs in limestones, sandstones, and shales, associated with beds of lignite or fossil wood, and is confined to particular strata which were originally shales containing vegetable remains which have undergone "a special mineralization, producing a bituminous matter instead of coal or lignite, and not attributable to heat, nor the nature of a distillation, but due to chemical reaction at the ordinary temperature and under the normal conditions of climate." He describes, also, wood partially converted into bitumen, when removed by solution, woody fibre remains.

The theory of the genesis of coal oil is however, far from being cleared up by such facts. It is true that the oil is not found in immediate contact with coal beds made of land or fresh-water plants; but on the other hand, coal oil regions are geographically connected with coal-bed regions, whether of devonian, carboniferous, oolitic, or tertiary age. Coal beds are said to underlie the Rangoon oil wells. Tertiary lignites abound in Trinidad, Venezuela, Lombardy, and middle Asia. The lower devonian horizon (?) of the Canada black-slate oil region yields coal beds in Pennsylvania. The structural difficulties attending the solution of the problem remain.

Fisures are filled with oil, and gas, and salt water, and different wells strike them at different depths. The oil-bearing sand rocks seem charged from top to bottom with gas and blow off at every fissure as it is passed through by the auger. Whence comes this gas, if not by subterranean distillation? It is impossible to postulate the gas first and the oil afterwards; for that order would require the generation of pressure sufficient afterwards, and the oil would be in the condition of a mechanically explosible fluid. The gas must be a subsequent expansion of the oil, as it is in the case of coal-mine fire-damp. Whence, then, comes the oil, and why has it collected in reservoirs? How are such reservoirs preserved, and what is their extent? It is easy, after these questions have been answered, to describe the mechanical propulsion of the oil to the surface, partly by gravity and partly by the pressure of the gas it has itself generated, through natural fissures producing natural springs, or through artificial auger holes. The intermittent action of most of the flowing and spouting wells is like that of the Iceland geysers, where steam is the motive power. The oil men of the Mahoning valley say that more gas is blown off in winter than summer. [The reader will find it interesting in this connection to call to mind the article in our last issue entitled "Cause of the Flow of Oil Wells."—En.]

At the Edenburg well, above referred to, the blast of gas is sometimes violent enough to stop the pumping of the engine for half an hour at a time. Mr. Clark reports a periodicity or daily maximum in the paroxysms. He noticed for several weeks that they recurred with singular regularity a few minutes after eight o'clock in the evening, when the engine was forced to stop for twenty minutes or half an hour.

Petroleum.—The petroleum oil business has assumed a magnitude almost incredible, and the amount of capital now represented by the various operatives in the Oil Creek region of Pennsylvania is immense. Petroleum during the past few years has formed quite an important feature in our exports, and has added in no small degree to pay our indebtedness abroad. The many uses to which it has been adapted has increased the consumption wonderfully, and is perfectly astonishing to those parties who first embarked in the business. American ingenuity and years of experience have assisted in developing the wells to an extent almost beyond the expectations of the most sanguine. The cost of production has been lessened of late by new and more economical machinery. The "petroleum mania" recently seized upon the people, especially of Philadelphia, and a large number of stock companies were formed to work the various wells.

Very many of these companies are under the management of honest and experienced business men, and all such are turning out to be a good investment. It may not be uninteresting to cite a few of the most successful ones. The Columbia Company, at Pittsburg, Pa., have just declared their usual monthly dividend of 50 ₱ cent. on their capital stock. This company is splendidly managed, and owns in fee between 500 and 600 acres of fine oil-producing territory on Oil Creek, extending a mile and three-quarters on the creek. The operations on their lands are quite extensive, and there are some 30 steam-engines which are used in boring and pumping the wells. A great feature of the "Story Farm," owned by the company, is that every well sunk produces oil. The Smoky City Oil Company, of Pittsburg, has declared a dividend of $24 per share, being net profits for six months ending June 1, 1864. The Noble Well Oil Company paid a dividend of 1 ₱ cent. on the capital stock for the month of May.

Interesting Metallurgical Experiments.—A New York correspondent of an evening contemporary writes as follows, under the above head:—Edward A. Kent, an assayist in an assay office in this city, has been for some time engaged in a series of experiments on ores of a pyritous nature, with a view to increase their average yield of gold and silver. Careful assays had long ago established the fact that these ores do not yield to the usual processes of miners even a fourth of the gold they contain; that metal being so blended with copper, zinc or iron, as to defy all attempts to separate even half of it. Mr. Kent, by an entirely original process, first eliminates the baser metals, leaving the gold and silver perfectly obedient to the attraction of quicksilver, and thus easily separable from the rock wherein they were imbedded. By this means, not only are the precious metals wholly abstracted, but there is obtained an ample sufficiency of the baser to pay the entire cost of mining. So signal has been the success of Mr. Kent's experiments that a company has already been formed to purchase his processes at a liberal price and commend them to general adoption. They are deemed especially valuable for Colorado, as a very large proportion of the ores of that Territory are pyritous, and have hitherto been worked with considerable difficulty and to moderate advantage. Should Mr. Kent's discoveries justify present appearances, they will add vastly to the product, and even more amply to the value of the Colorado mines.

Alkaline Stains.—These are the opposite of acid stains—they change vegetable blues to green, red to violet, green to yellow, yellow to brown, and annato to red. They are to be treated with acids. The writer once had a new pair of dark cloth pantaloons changed to a light brown below the knees, by riding on a load of fresh lime in a storm. "Oh! you have ruined your clothes!" was the exclamation; but he deliberately procured a cup of vinegar, and sponging the cloth gradually, completely restored the color, and then again sponging off the compound, left them as good as before.

A Novel Collegiate Institution.—The Rochester, N. Y., "Mercantile College" is conducted upon quite a novel plan, and which is said to operate most satisfactorily in giving pupils a practical knowledge of the routine of business operations, as well as a theoretical acquaintance with the various branches of mercantile education. The College is, in fact, a microcosm of the world of trade. Each pupil upon entering, is established in some business, and has put into his hands vouchers for the different items of property, which are to form his capital; a profusion of theatrical bank-notes, etc. He is expected to carry on various business operations, having his fellow pupils for factors and customers, and to keep an account of all his transactions in the usual style of book-keeping. Connected with the establishment is a bank, the notes of which are good in all the transactions of the college—except the payment of the principal—an insurance office, broker's office, custom house, etc., with all of which each pupil is expected to do business. Thus he learns something of the daily routine of mercantile life, while there is enough of versimilitude in his mock transactions to please his imagination and relieve the tedium of study. The idea seems to be a happy one and it is said that its successful operation is rapidly enriching the proprietor.

Bullion Will Tell.—Although heartless swindlers and crazy operators have brought our mines into disrepute abroad, we are bound to rise again Phœnix-like from the ashes of dead wild-cat. Our country stands on the firm foundation of bullion, and our bullion will tell. The mines of Gold Hill are yielding better than at any time since first opened. The Imperial mine is taking out five times as much metal as at any time in its history; the Belcher is doing much better than ever before, also the Empire and other claims we might name. Folks growl and grumble because times are not as they were last year, when everything was in an unnatural and unhealthy state of inflation. As the flow of this tide in our affairs was unnaturally high, so has the ebb been unnaturally low. The receding wave carries us back further than our proper station, but after a few vibrations—rather distressing, it is true!—we shall stand firmly in our proper position. Our bullion is a good foundation on which to build.—*Territorial Enterprise.*

Connecting the Lakes with the Seaboard.—President Lincoln has communicated to Congress the Report of Charles B. Stewart, Consulting Engineer, upon the improvements to pass gunboats from tide water to the Western Lakes. The engineer assumes that upon the connection of these lakes with the tide water depends the jurisdiction of our Government, our common defense and welfare, and that the Mississippi river should also be connected with the lakes. He gives as the total estimates for improved gunboat locks for the Erie, Oswego, Champlain, Cayuga, and Seneca canals with seven feet of water, over $18,000,000; and with eight feet of water, over $20,000,000; and the cost of a canal around Michigan Falls at from $10,000,000 to $13,000,000. The whole grand enterprise is merely a question of time.

How to Discover Small Pox.—The Electric Journal says concerning this matter: "Now we offer this secret to the profession—as soon as the eruptions appear, by pressing with the point of the finger there may distinctly be felt the small, hard substance, precisely as if a small, fine shot had been placed under the cuticle of the skin. This peculiar appearance belongs to no other eruptive disease. We have applied the term secret, here; for whilst it is, and has been known to a few physicians, it is not mentioned in any of the standard authorities; nor does the writer claim the credit of the discovery. After this all works upon practice will add this unfailing diagnostic symptom."

Returned from Boise.—C. Ralph, John Gin, Martin Cahill, John Nolan, Patrie Tye, and about thirty others, of San Joaquin, returned, a few days ago, from the Boise River mines. They report that emigration from that country will continue, as all that are able to leave are making tracks for California as fast as they can. They have, by stern experience, discovered that "all is not gold that glitters." They state that the mines were always a day's march ahead of them; but in marching far without finding them, they concluded to return to San Joaquin.

Gen. Meade says the wagon trains of the army of the Potomac would reach the distance of sixty-two and a half miles, if placed in a line close together.

Saturday Morning, July 23, 1864.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale. the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

CHANGE OF LITERARY TASTES.

Time was, even in America, when such authors as Spenser, Addison, Fletcher, Shakspeare, Jeremy Taylor, and others of like characters, formed the staple reading of the masses. The shelves of our circulating libraries were then filled, almost exclusively with such standard authors, interspersed with a few books of travel, history, poetry and science. Works of fiction scarcely found a place upon the shelves, and the few exceptions were generally those of a very high character, mostly semi-historical, and more or less instructive. But times are now most sadly changed. The shelves of our popular libraries, at the present day, are crowded with such authors as Dickens, Thackeray, James, Dumas, and others of a poorer stamp It is observable that such books are always well thumbed, and the quarterly reports of the libraries show that full four-fifths of all the works taken out are from among that class of authors; while the standard works, first above mentioned, as well as those of a later day, such as Macaulay, Carlyle, Ruskin, and others of that class, are scarcely soiled. So degenerated has the taste for reading become, during late years, that authors of real merit have, in many instances, to look to government for sinecures, with salaries, upon which they may live, while they tax their brains to produce something which shall afford substantial food for the mind. The public does not hold such world-benefactors in sufficient estimation, to give them even a living, while the authors of yellow covered literature live at ease and roll in pleasure upon the income derived from their publications.

These remarks are equally applicable to newspaper literature. While Bonner's Ledger and most similar periodicals are munificently patronized, with very few exceptions the class of papers devoted especially to useful arts and sciences, and the dissemination of really valuable information, are left to languish upon a bare support, eked out only by the strictest economy and industry on the part of their proprietors The effect of this perversion of literary taste is beginning to be felt quite materially in American society, and its final consequences, if persisted in, must indeed become deplorable.

All Secretaries are invited to send us reports of their company elections, together with any facts which may be of general interest concerning their works.—EDS. PRESS.

MINING SHARE MARKET.

The Mining Share Market exhibited a slight improvement during the first and middle of the week, but only to suffer a still farther relapse at its close. The chief feature of the past six days has been the important decline in the Ophir, which had maintained a marked firmness during the previous weeks of the panic. Savage, Potosi, North Potosi, and the Golden Age and Empire, have improved during the week, while the Imperial and Baltic have fully maintained their previous standing; all other stocks on the list have declined. Full confidence can never again be restored to the stock market, until the general management of our mines is placed upon a more economical basis, and regular reports of progress and prospects at the mines are periodically given by responsible parties, and at frequent intervals. The impression has gone out, and with much show of reason, that the principal mines known in our stock lists have hitherto been carried on chiefly for the benefit of a few managing shareholders, who have used the information which their position has allowed them to accumulate, through considerable periods of time, for their individual benefit, and at the expense of outside stockholders. More economy, and a higher standard of morality must be introduced into the management of mining operations, ere the public will again accord its former degree of confidence to that portion of our mining interest which is represented in those corporate associations which but lately bid fair to prove such an important help to the development of the great leading industry of the Pacific Coast. At present "outsiders" have no inclination to invest, not from any lack of faith in the *mines*, but from a want of confidence in their management under corporate control.

Gould & Curry has been less active, though freely offered at declining rates. Opening at $1,680@$1,700 it closed dull at from $1,550@$1,570. According to outside reports, the receipts of bullion from the mine continue large, and the appearance of the mine in the lower shaft is more promising. When a mine suddenly falls off in its monthly dividends from $125 to $50, without any intimation from its management of any change in the prospects, or any subsequent explanation, the public must necessarily lose confidence in it, as a medium for investment, and hesitate to operate in it with any other than a speculative view.

Ophir, which has steadily maintained itself through the present panic, up to the close of last week, has suddenly given way, and within the last three days, dropped from $700 to 530 cash and $500, seller 30 days. One hundred and fifteen shares were sold yesterday at from $575 cash to $500, seller 30. Work on the company's main shaft has been suspended for the present, owing to the influx of a large flow of water.

Savage has materially improved during the week. It is now held firmly at $1,100; $150 better than last week. This claim is said to be decidedly improving, and turning out a large amount of good ore, with a corresponding yield of bullion. A resumption of payment of dividends is looked for next month.

Chollar suddenly dropped on Monday from $400 to $300, failed to improve any on Tuesday, was quiet on Wednesday and Thursday, but advanced yesterday to $330 and $345, with considerable business.

Potosi was in better request at the commencement of the week, advancing from $950 to $1,050, but declining again on Thursday and Friday to $1.000 and $975. This stock has been quite active at the above figures. It is stated that the receipts of bullion from this mine for the present month are expected to reach $150,000. The mine is reported to be looking exceedingly well.

North Potosi improved materially during the first part of the week, advancing from $50 on Friday last to $70, on Tuesday; it met with considerable business on Wednesday at from $60 to $65, but still further declined yesterday to $50, its closing figure of last week.

North American has gradually declined from about $70 to $40, with a large business.

Baltimore American still further declined from $40 to $34.

Imperial is maintained with considerable steadiness at about previous figures—$145.

Burning Moscow has still further declined from $15 to 10½. It is but little enquired after.

Lady Bryan still continues very active, at a large decline. These shares opened at $8, with a small business, and closed yesterday at $2½ active; 1,817 shares have changed hands since our last issue.

Golden Age and Empire has manifested a slight improvement during the week.

Uncle Sam has been quiet during the week, until last evening, when it was offered at a decline of $75 from previous quotations. It may now be quoted at $325.

Nevada, J. G., has slightly declined from $25 to $22.

Baltic maintains its last week's figures firmly.

Empire Mining company has been heard from at $600; Bullion, G. H., at $45 to $50; California at $16; Blue Ledge at $3.

Real del Monte is quiet; 10 shares have changed hands at $13, and 20 at $9.

Utah has found a single purchaser at $22½, and Antelope one at $40.

Wide West has been heard from at from $7 to $8½, and Sheba at $50.

Live Oak, (copper,) has met with purchasers at from $16 to $22, and Index, Copper, is quoted at $12.

ELECTION OF OFFICERS.

BIG BLUE LEAD G. & S. M. Co.—Meeting, July 18th. Trustees, A. Haraszthy, A. P. Molitor, J. Landsberger, H. J. Park and L. Tickner. President, A. Haraszthy; Secretary. F. Fiedler; Treasurer, A. P. Molitor; Superintend, W. M. Donnell.

COLUMBIA GOLD AND SILVER MINING Co.—Meeting, July 11. Trustees, F. Henderson, John Ferguson, J. A. Jackson, J. D. Fry and Joseph A. Carrie. President, F. Henderson; Secretary, John M. Burnett; Treasurer, J. A. Ralston.

FRANKLIN TUNNEL AND MINING Co.—Meeting, July 15th. Trustees, Peter Johnson. W. M. Seawell, Robert Bell, Edward Cohrn and I. T. Milliken. President, Peter Johnson; Secretary, I. T. Milliken.

FORK GOLD AND SILVER MINING Co.—Meeting, July 18th Trustees, E. N. Fish, R Schultze, M. Winall, Wm. L. Boothby and George E. Crowell. President, E. N. Fish; Secretary, Charles B. Lafitte; Treasurer, S. Silverberg; Superintendent, Charles T. Harris.

GOLD HILL TUNNELING GOLD AND SILVER MINING Co.—Meeting, July 16th. Trustees, S. T. King, Chas. Sutro, P. Torre, P. G. Veuard, A. Genesy, Chas. Pioda and H. Hugnet. President, S. T. King; Secretary, R. Wegener; Treasurer, Chas. Sutro; Superintendent, F. Chappellet.

GOLDEN AGE AND EMPIRE GOLD AND SILVER MINING Co.—Meeting, July 14th. Trustees, J. B. Haggin, Samuel Purdy, E. P. Bowman, C. C. Bowman and Dr. Jno. Hastings. President, J. B. Haggin; Secretary, W. L Bromley; Superintendent, George Benson.

PRIDE OF THE WEST MINING Co.—Meeting, July 14th. Trustees, A. C. Nichols, E. V. Hathaway, Wm. Davenport, F. R. Baby, A. F. Tilden, E. Schultz and L. Herman. President, A. C. Nichols; Secretary, L. D. Ingoldsby.

SOLEDAD PASS COPPER MINING Co.—President, E. Grisar; Secretary, J. H. Rutenberg; Treasurer, H. Barroilher; Superintendent, F. Ahadie.

VEATCH SILVER MINING Co.—Meeting, July 12th. Trustees, E. D. Feusier, F. Mandlehaum, E. W. Hall, A. H. Hagadorn and I. Falkenau. President, E. D. Feusier; Secretary, S. T. King.

WASHINGTON GOLD AND SILVER MINING Co.—Meeting, July 11th. Trustees, A. Holluh, J. H. Welch, H. H. Allen, M. J. Newmark and Wm. Suhlett. President, A. Holluh; Secretary and Treasurer, M. J. Newmark; Superintendent, F. A. Miller.

IRON SHIPS AND IRON CLADS.

We are not aware that any authentic record exists with regard to the time when wrought iron plates were first used for building vessels. Iron barges were certainly used on canals, in Europe, previous to 1800. In 1824, a small iron steamer was built in England, and sailed up the Seine to Paris, under the command of Sir Charles Napier. We notice some authorities have dated this voyage as early as 1821. A paper read by Sir William Fairbairne, Esq., before the Royal Institution, London, in the summer of 1862, dates the occurrence in 1824, and is no doubt correct. This vessel was built by Mr. Manby, of Staffordshire, and is thought to have been the first iron vessel that ever attempted a sea voyage.

From that time to 1830, we hear of no further attempts at iron ship building. In the year last mentioned, a series of experiments was instituted by the Forth and Clyde Canal Company, to ascertain the laws of traction of light boats, at high velocities, on canals. These experiments led to the adoption of iron, instead of wood, as the material of which to construct their boats. Considerable attention was drawn to these experiments, which eventually led to a more extended application of iron in nautical construction.

Lightness being one of the chief points to be gained by the use of wood, steel was soon introduced, as being a material combining the best qualities of both iron and wood—great strength with comparative lightness. The first steel vessel, we believe, was the small steam launch constructed for the Livingston exploring expedition up the Zambesi river, in Africa. The next was the Rainbow, of 160 tons burthen, launched from Mr. Laird's shipyard, in June or July, 1858, and intended for the navigation of the river Niger.

The economy of the application of the principle of iron construction to merchant vessels, of even the largest class, was fully established previous to the experiments with steel; but though often suggested, its application to war vessels, either as as a material of construction or defense, was for some time after held in suspense. It was argued that an iron war vessel must be more dangerous than a wooden one.

The casing of the sides of war vessels, as a means of defense, was first suggested by the present Emperor of France, and put into actual execution in 1854. Iron plated war ships, however, never were looked upon with much favor until Ericsson completely revolutionized the architecture of war vessels, by producing his "Monitor," which, in its famous contest with the Merrimac, fully established the success of this style of vessels, and inaugurated a new era in maritime warfare. As a consequence of that experiment, the huge three-deckers of former days, with their hellying canvass and stately bearing, have been compelled to stand aside and give room for the long, low, black-looking nondescript, "like a cheese-box on a raft," wireing its way along through the water like a sneaking demon, intent upon a covert attack on its enemy. The transformation is not of a very heroic or poetic nature, but it is one of those changes in the progress of the arts which no nation can afford to ignore, and one which, more than anything else, by its very terribleness, will tend to equalize the naval power of nations, and drive war from the seas.

THE BLUE LEDGE.—The stock of this company is still very much depressed. We understand that the new superintendent thinks they have not hitherto had any vein at all but have merely been at work upon small spurs which have now been abandoned. He is now engaged in explorations which he thinks will lead to the true vein. The managers of the company have evidently been very much misled heretofore by the old superintendent, but strong hopes are entertained that under present auspices a workable vein will eventually be developed.

GOLD IN RICHMOND.—According to Richmond papers of June 11th, gold was at that time selling at the rate of sixteen dollars in Confederate currency for one of gold.

HUNTER'S NEW GOLD SAVER.

Mr. Andrew Hunter, of this city, has just completed a working model of a machine for saving gold and pyrites, that presents some novel features which certainly recommend it to favorable notice. The machine combines the characteristics of an amalgamator, a concentrator and separator. It consists of two separate machines, which may be worked together or separately. The first, and that which, when both are used, is placed next the battery consists of a square shaped flat wooden box, into which the pulp is first received. In this box are two sets of rollers of six each made to act backward and forward with reverse motion in close contact with the bottom; the object of which is to rub the quicksilver together, as miners often do in a pan to produce more ready amalgamation of the gold, or to bring the quicksilver and amalgam, from a finely divided state into a collective mass. This, we believe, is something quite new, and we see no reason why it should not become a valuable adjunct to the process of amalgamating.

The pulp is automatically discharged from this into the second machine, which is a modification of the percussion table. The pulp is received near the center, upon a mercurialized copper plate, which is made to swing backward and forward with a kind of percussive motion, derived from a crank in combination with a stiff steel spring. By the peculiar operation of this table, as soon as the pulp reaches it, the heavier portion, consisting of amalgam, fine gold or sulphurets, immediately commences moving up a slight incline, until it is dropped over the edge from the back of the table, while the lighter portion, consisting of the finely pulverized quartz, etc., mostly held in suspension in the water, is made to move in an opposite direction, along a perfectly level portion of the plate until it passes over the front of the machine, accompanied with the chief portion of the water.

This part of the machine has been in practical operation for some considerable time, near Oroville, by the Oroville Mining Company, by whom it is pronounced a complete success. The utility of the first described portion is as yet a theory, never having been tested, but numbers of old quartz miners who have examined it speak confidently of its practicability. It will soon be put to trial by the Oroville Company, in connection with that portion of the apparatus which has already given them the fullest satisfaction. The capacity of one of these machines is considered equal to the separation of the quartz discharged from one battery. The machine is simple in construction, and can be furnished at a moderate price. The frame work in which the machine operates is five feet wide by seven in length and five high, having about eighteen square feet of mercurialized copper plate to each machine. This model has been constructed for the purpose of being exhibited at the approaching Mechanics' Fair, and will in the meantime be placed at some convenient point for public exhibition, of which due notice will be given.

"The Mathematics of Mining."—We shall next week commence a series of articles under the above head, which will be prepared by a well known scientific writer of this city, who has long made the mines of the Pacific coast a study, and who will undoubtedly be able to communicate much which shall have a practical value to all persons engaged in the business of mining.

For the Colorado.—Mr. I. M. Blood, who is largely interested in the Henry & Barnard Copper Mining Co., on the Colorado, leaves on Monday, by the overland mail, on a visit to that mine, and to take a look at the mines generally. He will return by steamer and bring with him another shipment of ore from the mine.

Alpine Silver.—The Alpine *Chronicle* states that the first silver brick from ores worked in that district, made its appearance in Markleeville on Friday the 15th inst. The ore was worked by mill process, and yielded at the rate of $165.39 per ton.

Scorpion Silver Mining Company.—The claims of this Company are located on Scorpion Hill, about half a mile north of Virginia City, and just east of Cedar Hill. The claims of the company consist of thirteen veins, running parallel, and from 300 to 4000 feet distant from each other. The work thus far done consists of a tunnel running into the hill at right angles with the direction of the veins for a distance of 900 feet. Three of the ledges have already been intersected at a depth of about 100 feet from the surface. Several shafts have also been sunk on different portions of the claims for the purpose of developing the several ledges.

The company have recently employed Mr. Cummings Cherry, a mineralogist and mining engineer, to examine and report upon the nature and condition of their claim. Mr. C. has done so, and submitted a lengthy and well written report, in which he gives his reasons, founded upon scientific facts, for the correctness of the company's assumption that the northern extension of the Comstock vein must pass through the ground held by this Company. Whether the theory which Mr. Cherry attempts to establish is correct or not, it appears quite evident that the Scorpion company have a large extent of most promising ground, presenting indications which fully justify a thorough and careful exploration.

The work which has been commenced has thus far been conducted in the right direction. It is the only practical, and decidedly the most economical manner in which the ground can be opened. The character of the ledges already developed, is pronounced by the company's expert as exceedingly favorable, and lacking only depth to give them a working value. As the tunnel progresses the other veins will be opened at a greater depth. The location of the ground is favorable for mining and milling operations. A valuable stream of water has already been developed in the tunnel, which is now selling at the rate of $100 per month.

Important Improvement.—The Sacramento *Star*, of Saturday last, says that in consequence of the great rush of freight, the California Steam Navigation Company will proceed at once to raise the platform at the head of the steamer landing, in Sacramento, preparatory to laying a permanent railroad track through their freight shed and down the bridge to the steamer. A portable track will also be made to connect therewith, to be laid on the steamer, through the gangway. The motive power will be a steam engine, located at the south end of the freight shed. As an index of the amount of freight which is being received by the company, it is stated that the Antelope took up on Friday last, about seven hundred tons, and the Chrysopolis about one hundred and fifty tons. This, of course, was in addition to the Washoe's freight on the same night.

The Excess of Specie Export, this year, over last, is thus far within a fraction of $6,500,000; an increase of about twenty-six per cent. These figures afford a most remarkable commentary on the present panic in the mining stock market. They prove two things:—First, that our *mines* were never in a more healthy condition than at the present time; and second, that the existing panic is simply the result of a reckless system of speculation in mining stocks, without a particle of forethought, involving a single element of ordinary business calculation.

Bullion from Nevada.—During the week ending July 16th, $205,471 worth of bullion was shipped from Nevada. During the week previous $304,750 was shipped. Total for the two weeks, $510,221. This heavy shipment of bullion, under present circumstances, when so little, comparatively, is being done in the two leading mines of the district, is certainly a most gratifying indication of the progress of mining enterprise in Nevada Territory.

Treasure from the North.—The steamer John L. Stephens, which arrived from Victoria and Portland Monday evening, brought treasure to the amount of $263,367 91.

First Manufacture of Humboldt Silver.—Mr. J. H. Neale, of Unionville, has shown us two beautiful silver forks, manufactured, this past week by Mr. Otto Weidero, jeweller, on Montgomery street, from a bar of silver taken from three lbs of ore from the Moonlight ledge, of Humboldt. This we believe, is the first Humboldt Silver, which has been manufactured into any article of use or ornament. The work is creditable to the artificer, and the material highly indicative of a valuable mine of that precious metal. Mr. Neale also brought down several sacks of copper ore, from a copper mine in Humboldt. The ore was from the croppings, where two or three tons a day can be taken out by two men. This ore assayed $21.25 to the ton. Each a mine would be very valuable, if a furnace for reducing the ore to a *regulus* could be erected and worked upon the spot. We understand the proprietors have each a project in view, as material for building the furnace, and an abundance of wood for making charcoal for operating it, can be readily obtained in the immediate locality of the mine.

The La Favorita Mining Co., of Sonora, Mexico, received per steamer Oregon, 47 sacks of choice ore from their mine, also 34 bars of metal, and a quantity of *regulus*, which they will ship to-day per steamer Constitution to Liverpool. Another shipment of the same article is now *en route*, from the mine, to arrive here per next steamer. The company's ledge, running nearly perpendicular, is gradually widening, and the ore is growing richer the deeper the shaft is sunk. Assays of the above, made by Kellogg, Hewston & Co., give the following results:

Bars—Gold, Silver and Copper, per ton of 2000 lbs....	$478 00
Regulus.....	315 30
Ore.....	227 55

An advance on the shipment has been obtained on favorable terms from a private banking house.

The Harmon which was recently quite active in this market, and at one time readily commanded from $40 to $50, can now be bought for $1.00. We understand that the works were neglected by the old Superintendent, and allowed to fill with water. The management has been placed in efficient hands, the mill will be moved from its present location and placed directly at the mine, which will be freed from water and active operations be once more resumed. An assessment of $5 has been levied to meet the expenses of removing the mill and free the company from debt.

"From the Front."—Mr. McMurtrie, one of the California delegates to the late Baltimore Union Convention, writes to a friend in this State, that when he was at the White House he was in hearing of the artillery; but strange to say could not get as reliable news there of the operations of the army, as we get here in the San Francisco papers. In fact the most satisfactory news to be obtained in Washington City of the army operations is from the New York papers.

The Veatch Silver Mining Co., located at Clifton, N. T., have their incline down 60 feet, with a pay streak in the bottom of the same two feet thick. The incline will be carried down 200 feet, and connected with the upper tunnel. We understand that the prospects of the company are very flattering.

No More Racing.—The Commanders of the Sacramento steamers, Chrysopolis and Washoe, have so arranged that there will hereafter be no further provocation for racing. A very sensible course.

The Real del Monte.—An order has been granted to J. J. Robbins, plaintiff, requiring the Real del Monte mining company to show cause why it should not be enjoined from selling stock for the collection of an assessment levied for the purpose of further improving the mine. It appears that stockholders are becoming dissatisfied with the management of the concern, and want to see the end of assessments for "further improvements." The desire is certainly a very reasonable one.

THE INDUSTRIAL EXHIBITION.

We feel that we cannot too often or too earnestly urge upon our mechanics, and all others interested, the importance of prompt and personal exertion to render the forthcoming Exhibition that which all desire and expect to see it—a perfect success, and an important stimulus to California industry. Those who have the preliminary executive management are doing everything reasonable within their power, to make it so; but all their efforts will be powerless unless properly aided by those for whose especial benefit the Exhibition has been planned. Every one who can, should feel it his duty as well as privilege to contribute whatever he can in aid of the enterprise. Let our mechanics and manufacturers and our tradespeople of whatever class or order, begin in season to make their arrangements and preparations. It is none to early to commence now. The Institute appeals to "all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and to forward for Exhibition such articles as they may invent, discover, or make that may be useful, instructive, curious or suggestive."

The invitation is broad and comprehensive, and the object in view to be attained, is noble and useful in an eminent degree. The rules and regulations of the exhibition will be found in our advertising columns, and any farther information, which may be desired on that point may be obtained by addressing William Paton, Corresponding Secretary.

Mining Companies and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

Our Illustration.—We are indebted to the proprietors of the Miners' Foundry for the illustration of "A Model Quartz Mill," which we give upon our first page to-day. The plate has been prepared for their "Annual Circular," and has been kindly loaned to us. It constitutes the best illustration of what the interior of a quartz mill should be, of any engraving which has yet been presented to the public.

The Roads over the mountains are now in most excellent condition, and the stages are making remarkably quick trips. The travel, however, has greatly fallen off, and there are but few teams on the road. Freights are unusually low—from 2½ to 3 cents per pound.

A Bank for Virginia City.—A project is on foot for the establishment of a bank in Virginia City, to be called the "Bank of Nevada." Fifty of the leading merchants, says the *Herald*, propose to subscribe $10,000 each to the enterprise.

The French Coal Mines.—The yield of the French coal mines for 1863 amounted in round numbers to 10,000,000 tons.

Dividend.—The Belliagham Bay Coal Company has declared its monthly dividend, of $38 per share, payable at the office in San Francisco.

Gen. Grant set type sixteen years ago in a printing office in Ohio; Gen. Wadsworth, who was killed in one of the recent battles in Virginia, was a printer; the rebel General Zollicoffer was a printer; in fact the "art preservative" can boast thousands of distinguished participants in this rebellion.

The White Swallow, from New York a few days since, brought about 4500 kegs of blasting powder, the bulk of which was to the Hazard Powder Company.

The mines of Aurora have shipped $669,300 worth of bullion, up to the 1st instant, for this year, being an increase of half a million over last year.

It is said that the Rothchilds are to open a bank in Mexico, with a capital of $60,000,000.

The Masons of Sacramento are taking initiatory steps towards the formation of a stock company for the erection of a Masonic Hall.

DENTAL GOODS!

Dental Importing House.

R. H. McDONALD & CO.,

DRUGGISTS,

Corner Pine and Sansome streets, SAN FRANCISCO.

R. H. McDONALD & CO., DRUGGISTS,

SACRAMENTO.

We respectfully invite the attention of the Dental Profession to our large and complete assortment of Dental Goods,

DENTAL AND SURGICAL INSTRUMENTS, TEETH,

Gold Foil, Forceps of all kinds, Dental Chairs, Hand and Foot Lathes, Brush Cotton and Corundum Wheels, Pluggers, Scalers, Files.

ROSEWOOD DENTAL CASES,

Vulcanite material, Vulcanizers, Vulcanite Base and Impression Gutta Percha. A large variety of VULCANITE TEETH, Scrapers and Packers; together with a large and complete assortment of all articles of the latest and most approved styles of Vulcanite Work.

Dental Books.

We keep constantly on hand a supply of all the most approved Standard Works on Dentistry. Our efforts will be to keep a large and well selected stock of all Dental Material, so that the Dental Profession may confidently rely upon having their orders filled in the best possible manner.

3-3m R. H. McDONALD & CO., Druggists.

R. H. McDONALD. J. O. SPENCER.

WHOLESALE DRUGGISTS,

SACRAMENTO.

R. H. McDonald & Co.,

Cor. of Sansome and Pine Sts.,

SAN FRANCISCO.

THE INCREASING BUSINESS OF OUR ESTABLISHment, together with the wants of the Trade, have made it necessary to establish a House in the City of San Francisco, where we will be pleased to see as many of our old friends and customers as can make it convenient to call upon us. We shall keep at both places a large and well selected stock of

DRUGS AND MEDICINES,	PAINTS AND OILS,
SURGICAL INSTRUMENTS,	PATENT MEDICINES,
DENTAL GOODS,	HERBS AND EXTRACTS,
FANCY ARTICLES,	BREWERS' AND SODA
BRUSHES AND COMBS,	STOCK,
SHOULDER & BODY BRACES,	CORKS, large variety;
LADIES' BANDAGES AND	ASSAYERS' MATERIAL,
SUPPORTERS,	BURNING OILS & FLUIDS,
GUM ELASTIC STOCKINGS,	PLASTER PARIS,
TRUSSES,	MARBLE DUST,

Together with a large and complete assortment of all Goods kept in a well supplied Wholesale Drug Store.

We respectfully solicit those dealing in our line to examine and price our stock before purchasing elsewhere.

3-3m R. H. McDONALD & CO.

D. O. MILLS, Pres't. WM. C. RALSTON, Cash'r.

Correspondents in New York, LEES & WALLER, No. 33 Pine street.

Correspondents in London, BANK OF LONDON.

THE UNDERSIGNED GIVE NOTICE THAT THE ABOVE named corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and with the interior of this State, the neighboring States and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with ample facilities, and in conformity with articles of association will commence operations on the fifth day of July next, at the Banking House now occupied by DONOHOE, RALSTON & CO., corner of Washington and Battery Streets.

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in all business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members:

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each Certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Trustees:

NOTICE

To Marble Quarry Owners.

A PARTY HAVING A COMPLETE SET OF MACHINery for Sawing and Polishing Marble, would like to make arrangements for placing the same upon some good Quarry, as near San Francisco as possible, and become part owner of the same.

THE MACHINERY CONSISTS OF TWENTY-FIVE HORSE POWER ENGINE AND BOILER, A TWELVE FOOT RUBBING BED, TWO GANGS SAWS, &c.

If not otherwise disposed of, will be sold low for cash. Enquire at this office. 3-tf

WM. T. COLEMAN & CO.,

70 WALL STREET,

NEW YORK.

BUY AND SELL, ON COMMISSION, STATE AND CITY BONDS, Bank and Railroad Stocks, and other prime securities.

Buy and sell Exchange on California, Oregon and Western Cities.

Grant Letters of Credit, available in any part of the United States.

Receive moneys on deposit, and allow interest on special deposits at such rates as may be agreed upon.

Receive consignments of produce from California and Ports in the Pacific.

Make advances upon approved merchandise consigned to our San Francisco house.

Fill orders for staple goods of all kinds, for the California and Oregon markets, and effect Marine and Fire Insurance in the best offices.

Buy and sell and charter Vessels for all trades.

AGENTS FOR "COLEMAN'S CALIFORNIA CLIPPER LINE," loading and despatching regularly, every month, two to three first class clippers for San Francisco. Goods forwarded from any part of the United States or Europe, will be received with care and shipped immediately at lowest current rate of freight. Bonded goods carefully attended to.

Orders for purchase of merchandise should be accompanied with a remittance of about 20 per cent. of the cost, or satisfactory arrangements can be made with our San Francisco house. On order for Bonds and Stocks, 10 per cent. of the par value is always required.

We beg to say, no house has superior facilities for the transaction of all this business, and parties intrusting their interests to our care may rely upon our most faithful and watchful attention.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

Lloyd's New Amalgamator
Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. E. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 60 pounds of tailings the original ore having been worked by Professor Ryerson's Supercharged Steam Machine, was obtained 15¾ ozs., Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. R. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 75

The assay being made by Messrs. Molitor & Co.

From 20 pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Newston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $15 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 34.2 per ton; and over the works at the mill, $62 34.2 per ton. Result from 15 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $2.19; silver, $1.52, amounting to $3.71—the—equal to $361.33-100 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $154 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. O. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2 6.18-100. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Newston & Co., yielded $7.58-00—equal to $111.60 to the ton. Difference in favor of Lloyd being $114.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and is certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kustell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8 3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the trituration process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Mines' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS, NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to HUNGERFORD & PRATER, Proprietors.

Motherless!

What a sad, sorrowful word! How it quivers every tendril of the heart, and darkens the very recesses of the inner being! Motherless! Can a mother hear that word, and not feel a chill creep through her frame? Does it not carry a volume of sorrowful truths with it? Let us go down the hill of life, and read the shadows of the motherless heart—read them in their sternest form; and who can press the dreadful reality to the soul without a shudder? The tiny one waiting for the maternal sympathy, in its little sorrows and disappointments; or stilling its heart cravings by settling down in the cold ways of the world, with impoverished affections, and blunted sensibilities. No mother to answer to the calls of the little tender heart, or banish the blights of life in their early coming; and the life principle develops into maturity, cold, sordid and sinful, and goes forth into the world to be judged by its fruits, none asking if there is beauty in that soul, or dreaming that it was ever susceptible of aught but the laws of sin and erring mortality.

The fragile young girl, just verging into womanhood—stepping forth into the world to grapple with its realities, and no mother to counsel or check the wayward fancies, and lead the heart and affections in the channel of truth and right—who shall condemn rashly the childish errors of the motherless girl? O, no, reader! be gentle. Would your path have been thornless, or unmarked with condemnation, had the wise council and kind precepts of a mother been early called from you? Ah! deal gently with the erring one! Add no dregs to the already bitter cup. Remember that harshness and unsympathizing coldness chills, and "comes down upon the soul like an incubus." By the memory of your dead mother—by the possibility that your child may be motherless, be gentle; and lead tenderly and kindly the youthful, erring heart along the upward path of life, that when she goes forth into the world, your influence may have stamped upon the soul no misery lessons, no memories of saddened childhood, with its blighting effect and impoverished developments. Let her not go forth to mingle in the great drama of life with "motherless" written upon the tablets of her heart and stamped upon her soul.—*Red Bluff Independent.*

MONARCHY OF SLEEP.—The most violent passion and excitement cannot keep even powerful minds from sleep. Alexander the Great slept on the field of Arbela, and Napoleon on that of Austerlitz. Even stripes and tortures cannot keep it off, as criminals have been known to give way to it on the rack. Noises which at first serve to drive it away, soon become indispensable to its existence; thus, a stage coach stopping to change horses wakes all the passengers. The proprietor of an iron forge who slept close to the din of hammers, forges and blast furnaces, would wake if there was any interruption to them during the night; and a sick miller, who had his mills stopped on that account, passed sleepless nights until the mill resumed its usual noise. Homer, in his Illiad, elegantly represents sleep as overcoming all men, and even the gods, except Jupiter.

MR. COE, the Engineer, as he is styled, of the Bank of England, has recently invented a bank note for that institution with a filagree pattern which could not be counterfeited, but it costs too much to be introduced into use. The notes of the Bank of Bengal are covered on one side with what appear to be mere lines, but under the microscope they are found to be repetitions of the value and denomination.

IMMENSE DOCK.—At Birkenhead, opposite Liverpool, England, there is a great float, or dock, which has a water area of 120 acres, and is approached by three great entrances. The principal entrance has gates with a clear opening 100 feet in width. It is not quite finished yet, and the cost thus far has been enormous, being no less than $20,000,000, half of which was wasted in mistakes committed in the early stages of its construction.

MARSEILLES has suddenly become a great cotton market. From the increased cultivation of cotton in Egypt, Turkey, Itsly, and other countries in the Mediterraneau, it seems to supersede Havre, and to become a second Liverpool.

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. We congratulate our cotemporary on this sign of prosperity, which we need hardly say, is well merited.—*S. F. Argus.*

RICHARD WEGENER,

Accountant, Mining Secretary,

AND GENERAL AGENT.

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCES

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)	$5.00
Six Months, (one volume)	3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

NOTICE.

THE COPARTNERSHIP IN THE BANKING BUSINESS heretofore existing between Eugene Kelly of the city of New York, and Joseph A. Donohoe, Wm. C. Ralston, and Ralph S. Fretz, of San Francisco, under the firm name of EUGENE KELLY & CO., New York, and DONOHOE, RALSTON & CO, San Francisco, will cease on the 1st day of July 1864, Eugene Kelly and Joseph A. Donohoe withdrawing from the copartnership.

The business will be settled in New York by Eugene Kelly, and in San Francisco by Wm. C. Ralston and R. S. Fretz.

Depositors are requested to hand in their books for settlement at the banking house of Donohoe, Ralston & Co.

EUGENE KELLY,
(Per J. A. Donohoe, attorney,)
JOSEPH A. DONOHOE,
WM. C. RALSTON,
R. S. FRETZ.

San Francisco, June 13, 1864.

THE UNDERSIGNED, CALLING ATTENTION TO THE above card, give notice that on and after the first day of July next, they will continue the business of the above copartnership without interruption, at the old banking house of Donohoe, Ralston & Co., in this city, under the firm name of FRETZ & RALSTON, and in New York through the agency of Messrs. LEES & WALLER, No. 33 Pine street; and that on and after the 5th day of July next, they, together with D. O. Mills, J. B. Thomas, Louis McLane, Asa T. Lawton, Wm. E. Barron, Thos. Bell, Jno. O. Earl, Wm. Norris, J. Whitney, Jr., O. F. Giffin, A. J. Pope, Herman Michels, Frederick Billings, Geo. H. Howard, H. F. Teschemacher, A. Haywood, Moses Ellis, A. B. McCreary, R. M. Jessup, Samuel Knight, A. C. Wimerding and Wm. Alvord of San Francisco, and Jacob Korn, of Portland, Oregon, having become for that purpose duly incorporated under the laws of this State, will carry on the business of banking in all of its various branches at the same place and through the same agency, and upon the basis of a Gold and Silver currency, under the name of

THE BANK OF CALIFORNIA.

D. O. MILLS and WM. C. RALSTON will be charged with the management of the business of the Corporation.

WM. C. RALSTON,
R. S. FRETZ.

San Francisco, June 15, 1864. 25-1m.

JUST PUBLISHED,

By H. H. BANCROFT & CO.,

MINING LAWS AND FORMS,

THIRD EDITION, REVISED AND ENLARGED,

COMPILED BY H. B. CONGDON.

This edition contains all the Laws of the State of California and of the Territory of Nevada, relative to

MINING CORPORATIONS,

Canal Companies, Assessments, Transfer Agencies, Changing place of Business, Mineral Lands, Actions respecting and conveyances of Mining claims, Taxation, Foreign Miners, Etc., Etc.

TOGETHER WITH THE

Mining Ordinances of Mexico

—AND—

Recent Decrees of the Mexican Gov't,

Forms for the Incorporation of Mining Companies, and a Digest of the decisions of the SUPREME COURT of the State of California, Relative to Mining Corporations and Mining Interests.

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

IMPROVED WATER-WHEEL,

—PATENTED BY—

JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—it can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

OTIS V. SAWYER,

NOTARY PUBLIC,

And Commissioner for Nevada Territory.

Office, 608 Montgomery street, San Francisco.

Having resigned my Notarial Commission, I solicit for my late partner, OTIS V. SAWYER, from the community, and particularly from my individual friends, their patronage in all things that require the services of a Notary Public. [23 4t] W. W. WIGGINS.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs, Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY,
Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

NEW VOLUME.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Instituta appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other brauch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interests will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

Mining Notices.

Advertised in Previous Issues.

Animas Silver Mining Company, Ventanas, District of San Dimas, State of Durango, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 14th day of July, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, at the office of the company, No. 623 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEORGE A. HILL, Secretary.
Office, No. 623 Montgomery street, San Francisco, California. 3-4t

Amador Consolidated Silver Mining Company.

Amador District, Lander County, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 21st day of June, 1864, an assessment of Four Dollars per share was duly levied, upon the capital stock of said company, payable on the 27th day of June, 1864, in gold coin of the United States of America, to the Secretary, at the office of the Company, No. 623 Washington street, in the city of San Francisco.

Any stock upon which said assessment shall remain unpaid on the 27th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 8th day of August, 1864, to pay the delinquent assessments and cost of advertising and expenses of sale. F. S. CARTER, Secretary.

26-5t Office, 623 Washington street, San Francisco.

Augusta Gold and Silver Mining Company, Augusta District, Lander County, N. T. Office, 406 Front street, San Francisco, June 22d, 1864.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held November 2d, 1863, an assessment, No. 1, of twelve and a half (12½) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No 2, of twelve and one-half (12½) cents per share was levied upon the Capital Stock of said Company. Both assessments, Nos. 1 and 2, payable immediately, in United States gold coin to the Treasurer, at the office of said Company, or to John Moffet, Superintendent of said Company, at the mine, in Nevada Territory.

Any stock upon which said Assessment shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with costs of advertising and expenses of the sale. JOHN SHAW,

26-5t President.

Arizona Consolidated Mining Company, Eureka District, Arizona Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on tha 29th day of June, 1864, an Assessment of 20 cents per share was levied upon the capital stock of said Company, payable immediately in United States gold coin, to the Secretary, at the office of the company in San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 13th day of August, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of tha sala. By order of the Board of Trustees. N. G. FRENCH, Sec'y.

Caution.—All persons are cautioned against purchasing Certificates No. 43 for 20 shares, and No. 435 for 3 shares, (unassessable) in the Great Consolidated Boise River Gold and Silver Mining Company, the same having been fraudulently obtained from the subscriber. Transfer of same has been stopped on the books of the company.

J. W. REED.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

A Good Canvassing Agent Wanted at this Office, immediately, for the interior. None but an active business man with good references, need apply.

Great Western Tunnel and Mining Company, Aurora, N. T.

Notice is hereby given that a Stockholders' Meeting of the above company will be held in this city, in the office of the Company, No. 20 Exchange building, corner Washington and Montgomery streets, on Saturday, August 6th, 1864, at 2 o'clock P. M. By order of the Board of Trustees.

JOSEPH C. FORD, Secretary.

San Francisco, July 1st, 1864. 1

Great Western Tunnel and Mining Company, Aurora, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 27th day of June, 1864, an assessment of 25 cents per share was levied upon the capital stock of said Company, payable immediately, in United States Gold Coin, to the Secretary.

Any Stock upon which said assessment shall remain unpaid on Saturday, the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 17th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees. JOS. C. FORD, Secretary.

Office, No. 20 Exchange Building, corner Washington and Montgomery streets, San Francisco. 1

Illinois Gold and Silver Mining Company, Smoky Valley District, Lander County, N. T.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 11th day of July, 1864, an assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States gold coin, to the Secretary, or to Ralph Brown, Superintendent, Carson City, Lander County, N. T.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 2d day of September, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

M. A. WHEELER, Secretary.

Office, No. 1 and 2, Government House, corner Sansome and Washington streets. 3-4t

Imperial Gold and Silver Mining Company, Location, San Francisco District, A. T.

Notice is hereby given that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the above named company, there will be sold at public auction, at the office of the company, No. 410, Montgomery street, San Francisco, on Tuesday, the 2d day of August, 1864, at 2 o'clock P. M., to the highest bidder for Cash in United States Gold Coin, so many shares of the Capital stock of said Company, standing in the names of the following persons, as will be necessary to pay the assessment now due and delinquent thereon, together with all costs accruing for advertising sale, etc.

Assessment No. 1 of 50 cents per share, Levied March 17, 1864.

And in accordance with law, and an order of the Board of Trustees, made on the 30th day of May, 1864, so many shares of each parcel of said stock as may be necessary will be sold at the auction rooms of Messrs. Jerome Rice & Co., No. 327, Montgomery street, San Francisco, on Wednesday, the 13th day of July, 1864, at One o'clock P. M. of said day, to pay the delinquent assessments thereon, (being fifty cents per share) together with costs of advertising and expenses of the sale.

J. F. MILLER, Secretary.

Office, 416 Washington Street, San Francisco, June 25th, 1864. 26-3t

POSTPONEMENT.—The above sale is postponed until Saturday, July 23d, 1864, at the same place and hour. By order of the Board of Trustees. J. F. MILLER, Secretary.

2-2t

Sistera Gold and Silver Mining Company, Augusta District, Lander county, N. T. Office, 406 Front street, San Francisco, June 22, 1864.

Notice is hereby given, that a meeting of the Trustees of said Company, held October 17th, 1863, an Assessment, No. 1, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Also at a meeting of the Trustees of said Company, held March 9th, 1864, an Assessment, No. 2, of fifteen (15) cents per share was levied upon the Capital Stock of said Company. Both Assessments, No. 1, and No. 2, payable immediately, in United States gold coin to the Treasurer at the office of said Company, or to John Moffet, Superintendent, at the mine, in Nevada Territory.

Any stock upon which said Assessments shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 31st day of August, 1864, to pay the delinquent Assessments, together with cost of advertising and expenses of sale.

26-5t J. FRANK MILLER, President.

Silver Age Mining Company, Amador District, Lander county, Nevada Territory.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 25th day of June, 1864, an Assessment of One and Fifty Hundredths ($1.50) Dollars per Share was levied upon the Capital Stock of said Company, payable immediately to the Secretary in United States Gold Coin, at the office of the company in this city.

Any Stock upon which said Assessment shall remain unpaid on the 30th day of July, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 13th day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale. By order of the Board of Trustees. SAM. P. HOWES, Secretary.

Office, 42 and 43 Government House, N. W. cor. Sansome and Washington streets, San Francisco. 1-5t

Schmeltzer Mining Company, American District, Humboldt County, Nevada Territory.

A Stockholders' meeting of the Schmeltzer Mining Company will be held at the office of the company, 621 Clay st., on Wednesday, the 3d of August, 1864, at 7½ P. M., for the election of officers, and such other business as may be presented. M. G. ELMORE, Secretary.

San Francisco, July 2, 1864. 1-4t

Tellurium Gold and Silver Mining Company, Pine Grove District, Amador County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 13th day of July, 1864, an assessment (No. 7) of $1 per share was levied upon the Capital Stock of said company, payable immediately, in gold coin of the United States of America, to the Secretary, at the office of the company, 627 Clay street, in the city of San Francisco, California, or to J. H. Bradley, Esq., at Pine Grove, Amador county, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. WM. H. MARTIN, Secretary.

Office, 627 Clay street, San Francisco, Cal. 3-4t

Wellington Gold and Silver Mining Company, Wellington Ledge No. 2, Santa Catalina Island.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of July, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable on the 16th day of July, 1864, in United States gold coin, to the Secretary, at his office, No. 605 Sacramento street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Wednesday, the 17th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay said delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. G. GARDNER, Secretary,

Office, 605, Sacramento Street, San Francisco.

POSTPONEMENT.—The advertisement of delinquent stock on the above assessment, is postponed until August 20th, 1864, and the sale thereof is postponed until September 3d, 1864. By order of the Board of Trustees.

3-5t S. C. GARDNER, Secretary.

Wide West Copper Mining Company, Copper Canon District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 14th day of July, 1864, an Assessment of 20 cents per share was levied upon the Capital Stock of said Company, payable immediately, in U. S. gold coin, to the Secretary, or to J. M. Pike, Superintendent, at Copperopolis.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent Assessment, together with the costs of Advertising and expenses of the sale. By order of the Board of Trustees.

Rules for Advertising Assessments on Saturdays.

Levy your Assessments upon any day Except Friday.

Advertise the Assessment Notice on the First Four Saturdays succeeding the day upon which the assessment is levied.

Appoint the day for advertising the Delinquent Sale on the Fifth Saturday succeeding the date of levying the assessment.

Appoint the Day of Sale on the Seventh Saturday succeeding the date of levying the assessment, or on any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 57 Government House, corner Washington and Sansome streets, San Francisco.

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the Press upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

Mining and Scientific Press Patent Agency,

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for each patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their cases properly conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way is to remit by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceed with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, groups, designs or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 y'rs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	60
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer to an injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and validity of patents covered by them, and direct what legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the Judges of the Court of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Vol. 9—Volume IX.—July 16, 1864.—The Industrial Exhibition; The Art of War; Power of the Magnet; The Conflagration of the World a Scientific Possibility; More about the Theory of the Mines of the Sierra Nevada; How to Detect Adulterated Quicksilver; The Cause of the Flow of Oil Wells; The World's Drought of 1864; The Salt Trade of Washoe; New Era in Portraiture; Formation of Iron by Metallurgical Insects; Old Without Knowing It; Eating when Sick; Weather and Health; Efficacy of Onions; Boiling Water; Shareholders' Directory; Stock Reports—Sales and Prices Bid and Asked; Inventors and Inventions; The Lenoir Gas Engine; The Rivet Process; Improved Hoop Fastening; A New Journal Box; Value of Evening Hours to Mechanics; Value of Skillful Stoking and Firing; Iron Ore in Reese River; Our Summary of Mining News—Humboldt, Washoe, Reese River; Washoe Coal Co.; Volcano in Butte Co.; Gold in a Corner; Looking Eastward; Esmeralda; Mining Share Market; From Owensville; Songs of Birds; Items of Interest; etc.

The Mining and Scientific Press is published every Saturday morning. Each number contains sixteen pages of sixty-four columns. Terms, by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very fair.

Notice of Dividend.

At a meeting of the Trustees of Crescent Quartz Mining Company, held June 20th, 1864, a Dividend of Fifty dollars per share was duly declared, payable on July 1st, 1864, at the Office of the Company, Indian Valley, Plumas County, Cal., or in San Francisco, at the office of Isaac Glazier & Bro., 311 Clay street. [26-4t] WM. A. BOLINGER, Sec'y.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the Mining and Scientific Press on application at the office.

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "slight cold" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. *"Brown's Bronchial Troches"* give almost immediate relief. *Military Officers and Soldiers shou'd have them, as they can be carried in the pocket and taken as occasion requires.* Agents for California,

FAILING EYESIGHT.

The eye-sight generally begins to fail at from forty to fifty, and is noticed by an instinctive preference for larger print; a seat near a window, for reading, is unwittingly selected; there is an effort to place the paper at a convenient distance from the eye, or to turn it so as to get a particular reflection of the light; next the finger is involuntarily placed under the line read, or there is a winking of the eye as if to clear it, or a looking away at some distant object to rest it; or the fingers are pressed over the lids in the direction of the nose, to remove the surplus water caused by straining. When spectacles are first used, they should not be kept on steadily, only in the early morning, or a cloudy day, or dim light, or with fine print, or sewing. Favor the failing eyesight, especially while reading, as much as possible, by sitting in such a position as to allow the light to fall upon the page obliquely over the shoulder, and by not reading or working in the twilight of the morning or evening. It is an excellent plan, and one which will greatly strengthen the eyes, by devoting a short time each day to looking at distant objects; relief, when the eyes are weary, will come quicker by so doing, than by closing them entirely. Sailors, who are constantly on the lookout for distant land or ships, seldom have poor eyesight. The same is true of people who spend much of their time abroad, in the fields, etc. It is a lack of this exercise for the eyes, rather than an over use of them, that makes poor eyesight so common among students and sedentary persons. Sore eyes are as common, and perhaps more so, among out door than in-door people.

It is a good plan to pass the balls of the fingers occasionally over the closed eyelids, in a downward direction. This action carries off any excess of water into the nose. Wash the eyes freely every morning. If cold water is used, do not allow it to enter the eyes, but wash the closed eyelid. It is beneficial to immerse them in warm water, and open and close them several times, the warm water acting as a solvent upon any particles of hardened matter that may have collected about the lids, and is soothing and grateful to the eye generally. The temperature of the feet affects the eyes, as well as every other part of the body; always keep them dry and warm, so as to prevent an undue accumulation of blood on the brain, as it always seriously affects the eyes. The moment the eyes feel tired, give them rest; you cannot overtask them with impunity.

A Daily Press Glutted Even to Blindness.

"Better is the poor man that walketh in his integrity, than he that is perverse in his lips, and is a fool."—*Proverbs.*

The question often arises to my mind, why will people kill the goose that lays the golden egg? The fabled eagerness of him who gutted his bird is explained by his thirst after riches being so great that he could not wait for the slow goose to lay the eggs that were to bring him wealth, but wanted many eggs or great riches at once. Our modern goose killer, with less judgment or discrimination than the fabled one, guts his bird, having apparently no object to attain by so doing, excepting, perhaps, the gratification of his propensity for ridicule or destructiveness.

This idea has been suggested by the thoughtless course pursued by many of our people and also frequently, too frequently, by the daily press. We find the moment a mining enterprise is mentioned in the hearing of many they ridicule it at once, setting down the originator as visionary in his undertaking or as a dishonest speculator in wild cat stocks. Almost any article burlesquing the great industrial pursuit of our coast, readily finds a place in the columns of our daily press, and an article describing the works of a profitable mine would scarcely find a paper to print it; a suspicion that the article was written for speculative purposes would debar it at once. Local-itemizers, and half-fed Bohemians gobble up with rapidity any trifling occurrence upon which they can base a sensational article "ventilating the stupendous swindling transactions" of mining corporations. In most of these articles directors, secretaries and superintendents are "handled without gloves," and represented as growing fat on assessments filched from the pockets of gullable shareholders. All varieties of gross ridicule and caricaturing are indulged in, and generally the reader is left to infer that ALL mining incorporations are South Sea Bubbles or grand swindling schemes, and that most mines exist only in the imagination of the shareholders, and furthermore that most assessments are divided, *pro rata*, or otherwise, among the sharp "insiders." From this class of shallow writers nothing better can be looked for, they never having an idea beyond a few far fetched puns, at a penny a line, and as for understanding the resources of a country or the chief pursuits from which a people derive their wealth and prosperity, that must not be expected from them; their education having been neither commercial nor financial. They are not fit to criticise any schemes tending to the advancement and general benefiting of a community. Their forte is to announce. It is a more serious undertaking to instruct and substantially benefit a people. Flippancy of style in the construction of newspaper items, caricaturing, punning and *badinage*, all have their effect on readers whose minds are not well balanced, and often prove a powerful lever in overthrowing the most beneficial of industrial enterprises.

We most assuredly have the right to expect that the proprietors or chief editors of the press on this coast should understand that we owe our very existence, as Californians, mainly to our mines, and that to discourage mining undertakings, indiscriminately, is seriously sapping our vitality. If it is their aim to encourage our people in their legitimate vocations, they should rigidly adhere to a course tending to the rapid development, rather than the retarding of our mining interests. They should learn to discriminate between Montgomery street gambling, and honest mining, and in no instance to condemn in so general a manner, by ridicule or otherwise, all mining enterprise.

Stock gambling is an unavoidable evil that all communities will sometimes indulge in, and particularly should it be an object of our press to discourage all such gambling without mistaking it for the gains or losses to be derived from mining and thereby tending to keep capital from our mines. Look over the columns of our daily papers and you will find them filled largely with mining advertisements. After having noted this fact, examine the reading matter and you will scarcely fail to find articles of various kinds tending directly or indirectly to discourage the very parties assessed to pay for these advertisements. The paper solicitor was anxious to secure these very advertisements, and will dun a poor secretary to death, if any of the companies are unable to pay. Pursuing such a course is killing the goose that laid the golden egg, from mere wantonness, and after the reading of such suicidal articles or squibs on mining, as appear daily, well might one be convinced of the truth of the proverb, "He that answereth a matter before he heareth it, it is folly and shame unto him."

Our great misfortune is that we have in our zeal undertaken to develop more mines than we have capital to go on with. Very few really "Wild Cat," or bogus mining companies have ever enforced their assessments in California or on this coast; but to read our papers, Eastern and European capitalists, whose aid we require, might infer that the majority of our mines are "Wild Cat" speculations and that we possess only a few really valuable ones. Give us more capital to lubricate the working of our mines and this mad dog cry of "Wild Cat" will soon be hushed.

Judicious investments, backed by the proper amount of ability and perseverance will pay large returns. This fact should be promulgated, all legitimate mining undertakings encouraged by it, and as we are only now in the primary class, as miners, *the founding of mining schools* in this State should be strongly advocated by our press, that the rising generation may have graduates and professors of the arts of mining and reduction of ores, to enrich our community. When this shall have been done we may look for the brightest period in mining history. I would ask some of these scoffers at mines and mining enterprises if the silver regions of Washoe, Reese River, Humboldt, Mono, Coso, Kern River, Catalina Island and others from the mouth of the Colorado, and along the western slope of the Sierra Nevada, and the auriferous states and territories are objects of humbug and ridicule, or if they are not the living reality of the day dreams of the hardy miner, awaiting only the magic touch of capital to yield a flow of untold wealth into the lap of commerce? If there are skeptics who doubt this fact, they will be answered by the present and future prosperity of California and neighboring states and territories, and in their shipments of coin and bullion by each steamer. With a proper perseverance in our mining operations, and faith in our own undertakings, we shall never again be annoyed by a crisis or panic such as now depresses our community.

DON AUGUSTINE.

THE CHIEF LOCAL EXCITEMENT of the week, in this city has been the arrest of C. L. Weller, formerly Postmaster here, and chairman of the Democratic State Committee. The arrest was a military one and Mr. W. has been sent to Fort Alcatraz.

[Written for the Mining and Scientific Press.]

THE MATHEMATICS OF MINING.

EDITORS MINING PRESS:—The business of mining, the world over, is looked upon as precarious and uncertain and in view of the experience of the past two years the all but universal sentiment of the people of this city is in perfect accord therewith. Periodically we are afflicted with some new excitements. We who have been here since '49 can recall "Gold Bluff" where there were reported millions lying around loose upon the shore. There were nineteen members in the company, and the secretary estimated there was just $43,000,000 apiece at a low figure. We had a mining mania then, sure, for a time. We also had the "Gold Lake" excitement, Kern River, and Frazer River, with an occasion relapse between, and of late Washoe and Reese River, and a final explosion of the bubble, bringing desolation and poverty to many a hitherto happy home. As an intelligent people we are now asking ourselves if this business is inevitably thus precarious? If there are not some definite principles which are to be depended upon, to guide us in this pursuit?

The aim and scope of these articles will be to show that there are some first principles, on which we can depend for guidance. That the maxim of the uneducated miner that "where it is, there it is" is unjust to himself and his calling, inasmuch as it is virtually folding of the hands and declaring that nothing more can be done to divest this calling of its precariousness. It may not be said that our ill success is all ill success for the result of this amount of labor done will doubtless result in such an elaborate array of facts pertaining to the metals and the rocks that we shall be able as I think to so arrange the facts pertaining to successful and unsuccessful mining, as to be able to educe correct principles which will be our safe guide in all our future mineral explorations; and if in time to come we can point to successes as the result of the discoveries of these principles, then all our present labor will not have been in vain.

The business of mining, in its very nature, is dealing with earth and matter, and hence we need to know all that is known or may be known about the earth's surface, its rocks and their chemical composition, and their various relations, all of which is included under the general head of geology. As the word implies, *geo*, the earth, and *logos*, a discourse or reasoning, even so we need to reason about the rocks and metals and their uniform relations; and if from facts we can establish any uniform, fixed principles on which we can depend, even as two and two make four, or even approximate thereto, we may conclude that we have made a beginning of the science of mining, and that the day may come when we may be able to place it upon a basis somewhat mathematical.

It must be confessed that the exponents of the science of geology have done very little to advance the interests of mining. Miners have looked to geologists to answer difficult question, and to achieve successes, in view of their

superior knowledge; but their achievements have failed to be commensurate with their pretensions, until the miner now is but too ready to scout and ridicule all the proffered aid of geology. What we in reality need is practice and theory conjoined, geology or rather geognosy applied to mining.

Geology is a reasoning about the formation of the earth and the materials of which it is composed, and their order and position and relations, and the result is a knowledge of facts or geognosy, and as a mining people we need to know the self-evident relations of rocks and metals or the geognosy of mining.

I purpose in these articles to examine gold, silver and copper mining and their associate rocks, true and false ledges, topography, geology, and shall somewhat describe the rocks of the slope of the Sierra Nevada from the summit to the valley. Shall describe the rocks and metals of Mt. Diablo and the Coast Range, show the geology of coal, where it is to be found and how, and the outward indications of metals and coal, and shall, as needed, illustrate the various points of importance by diagrams.

The rocks of the earth's surface may be divided into three general classes, viz.: primary, volcanic and secondary. The primary rocks are deemed only those which composed the earth's crust when it cooled down from its supposed original molten state. I shall waive all discussion of this question of cosmogony, and accept this view as true. The volcanic rocks or traps are called intrusive as they are supposed to have come up at a later period, intruding themselves, by volcanic force from below, through and among the primitive and secondary rocks of the earth's surface. The secondary are presumed to be composed of the debris of the other rocks modified in their appearance by volcanic heat and aqueous action and possibly by other collateral causes.

First, the primitive rocks are of various kinds. If we examine them in the field, among the minerals, we find granite, talcose slate, hornblendic slate, micacious rock, serpentine and many modifications of these rocks or traps. We find greenstone, porphyry, marble, granitic, black and talcose traps and their modifications, basalts, obsidians, &c.

The secondary rocks will be described with coal. With these primitive and volcanic rocks, everywhere, we find the metals, gold, silver and copper. If we examine the rocks from the summit of the Sierra to the valley, we find on the summit, granite. A few miles west, say 30 miles (I am quite sure there are changes in that 30 miles, but cannot verify them now) we find micacious rock, (primitive) next a belt of marble (trap) 1,500 feet wide and beside it, on the west, a mine of peacock copper ore one of the finest mines in the State and then granite (primitive) for miles in extent; then still proceeding westerly we find hornblendic slates, marble again, a very wide belt, and probably copper with it again—a few weeks will determine—then talcose slate, for two miles, then talcose traps, a narrow belt, beside which is found a true gold mine. Passing on west one mile, over talcose slate, we find greenstone trap, and as we advance it changes gradually to granitic trap. It continues for four to six miles, when granite appears again and continues on westerly for several miles, and so on, greenstone trap and talcose slate and marble with copper; and thus on through various changes of primitive and trappean rock to the valley, and with these rocks, all the way from the summit, gold and copper are constantly found at certain points of contact of certain rocks. Here then is an intimation of system, method and order in the arrangement of the rocks and metals which will be more fully illustrated as we proceed.

To make my subject fully understood I need to make an explanation, right here, concerning traps. The word trap is derived from the Swedish word *trappa* signifying step or stair, and is applied to those volcanic rocks which lie in a step form, as we see anywhere through the mining regions. Now all traps, while they have the same conceded volcanic derivation, are not true traps lying in this step form, so that the rock can be taken right out in blocks with two flat sides fit for building stones; but some are massive, that is, without any fracture, or it may be amorphous, that is, they are fractured irregularly or without regular form. Greenstone is found as a true trap, massive and amorphous. Porphyry is amorphous, and possibly massive at times, as the Egyptian sarcophagi were formed of it. Marble is massive: black trap, massive and amorphous, talcose is massive, granitic trap is amorphous and not massive. There are several other peculiarities about this class of rocks which we need to keep carefully in mind so as to know our latitude and longitude at all times in the field, when searching for metals.

The true traps, that is, those lying in true step form, are not immediately associated with the metals, gold, silver or copper, but are barren of the metals, and lie in wide belts. The traps with which the metals are formed are in narrow belts and are either massive or amorphous. By narrow I mean, say 1,500 feet wide and less, whereas the true traps may extend for miles. I have classed marble among the traps for the reason that it is found throughout El Dorado and Placer counties, associated with the primitive rocks and metals (copper) just as we find amorphous and massive greenstone trap, in Amador and Calaveras counties, associated with gold and copper in the primitive rocks. I am aware that marble is ordinarily considered a metamorphic limestone, changed by heat and therefore should be found in connection with the sedimentary rocks which do not lie within thirty miles of the locality. Nor is there only one belt of marble, but three certain, if not four, between the summit and the valley of the Sacramento. Any one who will examine the marble and associate rocks, *in situ*, will see that there is no evidence of sedimentary deposition. All the surrounding black slate rocks have the true volcanic dip, that is, they dip toward the Sierra, as all the sections of rock show at their lines of contact and all the lamination of the slates also. These black slates have been commonly considered clay slates. Now the clay slates belong to the anthracite coal and are only found in a particular location in the sedimentary series, and are quite limited in extent; whereas these slates extend for miles upon the flank of the Sierra, probably forming the bed rocks of the "Black Slate Range," so called. Moreover were the slate and marble both sedimentary then they should be always found together, whereas the marble is found on the Middle Fork of the Cosumnes, sixteen miles east of Placerville, in a belt of about 1,500 feet wide, from east to west, with a micaceous rock (primitive) on its eastern side and granite, five miles in width, on the west, with quartz and peacock copper ore between the marble and granite. Here then is a beautiful, pure, massive saccharoid marble, 500 feet high above the level of the river, between two rocks, the geological character of which is not for a moment supposed to be sedimentary, but conceded on all hands to be primitive, and has the true volcanic dip to the east as all other primitive and volcanic rocks, and with it in the same relative position that the metals are found with other traps and primitive rocks we find the metal, copper ore, situated. Can any thing be more plain than that if greenstone is a trap that marble is also.

The course of the traps and the sections of primitive rocks is the same as the axis of the mountain chain N. N. W., S. S. E. At Marble Valley, ten miles from Folsom, copper and marble are found associated with primitive slates. At the alabaster cave, a few miles from Auburn, in Placer county, the marble lies against the primitive slates, as can be seen at the entrance of the cave. One can insert a knife between them so plainly are they defined and separated. There can be plainly seen the dip of the rocks to the east. In the cave can be seen portions of the slate imbedded in the marble, apart from the east slate wall, and in the wall overhead, in the cave, is to be seen the green carbonate of copper. Taking the hint they put a shaft down beside the west wall of the marble and found a fine copper mine. If marble is a trap then it was the place to look for it as a mathematical truth. At a locality, say ten miles northeast, in the Excelsior and Nyman copper mines, both have marble hanging walls. At the Lancha Plana mine, Campo Seco, there is some marble taken out of the shaft, and at the Newton mine of Amador, carbonate of lime, a few inches wide, accompanies the ore on the east wall, I think, between the metal and amorphous greenstone trap. At the Nip and Tuck mine they have marble. The hanging wall and foot wall of the marble at Alabaster, Cave, is black slate. Above Placerville, about three miles, are two belts of marble, one, the most eastern, a wide belt between hornblend slate and probably barren of copper, and a narrow 500 feet wide belt between hornblend slate and talcose slate, which is now being prospected for copper, it having the true iron hat in the right position.

There are many other points in the questions of trap which will find explanation and elucidation as we proceed. Are these belts of trap continuous from end to end of the flank of the Sierra? This is a very important question if we concede what I assume, that the metals are invariably associated with this class of rocks and that to find the metals we have only to walk across the country crossing the measures at right angles and if we can find the traps developed, then at certain points in the topography we will infallibly find the ledge which is metal bearing. My opinion is that these belts of trap are quite limited in extent. Thus the gold belt of Amador extends, I think, from the vicinity of Jackson westerly to Clarksville near Folsom, and I doubt at present if it extends any farther. The belt of traps of Copperopolis mines may extend four miles northerly, but I do not know how far it may be found southerly, my time not permitting the examination; but if not there, it is in vain to look for the copper.

The Copper belt on which the Newton mine is situated extends from Ione or Jackson Valley, to near Folsom, I think. That it is not on the continuation of the Copperopolis belt is very evident from the country primitive rock. I shall pursue this subject in my next.

O. W. Easton.

The Mines of Lower California.

We find the following account of the condition and progress of the mines of Lower California in *El Mexicana* of the 2d inst., a paper printed at La Paz, in the immediate vicinity of that rich and interesting mining district. It will be read with much interest.

The want of reduction works is a sad drawback to our prosperity. Our metals which do not pay more than fifty dollars per ton will not pay to export. The Mexican Co. have thousands of tons of such metal thrown over the dump. The Triunfo Co's mill has within the past few days commenced work. Everything working satisfactorily, and we hope, the next steamer will carry some of their silver bars to San Francisco. One hundred and fifty tons of rich ore are at the Ventana awaiting the arrival of the "Sunny South;" the greater part of this ore is from the "Marronena" mine. The smelting process lately undertaken at the Franco American Companies' works proved a success as far as the operation was concerned, and when pursued on a more enlarged scale will prove profitable. A number of steam pumps are also in active operation on the following mines, namely: Las Chureas, Santa Cruz, San Jose, Gobernadora, and Nacimento, all of these mines will produce metal in a few weeks, having all been prospected and known to contain good metal, they are also owned by wealthy companies in San Francisco who will push the work forward with vigor. The Triunfo Co. have three mines all in metal and can supply an unlimited quantity. The Maria Co., has abundance of rich ore, but for some reason are working but few men. The Marronena and Codocia although on good metal and in abundance, have ceased work altogether. The Fortuna, San Pedro, Espinosena, Nacimiento and Guasave are also on good ore; all the last named mines are on the same vein, and not troubled so much with water as the first above named. The work on the San Nicolas has been discontinued although in abundant and rich ore. On the Mina Rica vein several tunnels are progressing rapidly but up to this time the vein has not been tapped. The Raucheria has just struck metal in large quantities which promises well. There are many other mines in which good prospects have been found. Those spoken of are on the two large veins that traverse the Triunfo and San Antonio Districts.

In Cacachila and Ranchita the developments are not so flattering, with one exception, the Libertad mine. This mine appears to have fine prospects; the vein has been struck in the tunnel, and large quantities of rich metal is now being extracted. Mr. Joseph Prisk the Superintendent, with only one man to aid him the largest portion of the time. Although an intelligent and scientific man, he is not above tackling the face of the drift himself. This mine has been worked in the most systematic and economical manner, and we believe few can boast of having done so much work at so little expense.

El Tesoro an old and famous mine of this district, seems pursued by an obdurate fate. It is years ago the bright, rich and shining ore was found below the old works at a depth of two hundred feet, although the mine has been worked almost constantly since then and many thousands of dollars have been expended; its Tesoro as in our magic stories, always, seems to elude the pursuers' eager grasp. The works on the Bella Vista mine are progressing steadily. In a drift from the shaft an hilo containing good metal has been struck which gives promise that when the vein is reached, which cannot be far off, this will be well rewarded for their enterprise. The tunnel of the "Del Forte Co.," is now about two hundred feet in length; in crossing a seam of wet clay lately, and before timbers could be got in place, an extensive cave occurred, fortunately, without doing any further damage, than loss of time. A stream of fourteen inches of water is now continually running from the mouth of this tunnel.

The San Rafael mine in Ranchita is owned entirely by residents of this Territory. It has been worked steadily, with few intervals, for the past four or five years. The projected works on this mine are the most extensive in the Territory. It requires a tunnel five hundred feet in length to reach a depth of three hundred feet underneath the old works; already three hundred feet of the tunnel have been completed, a portion through some of the hardest granite ever encountered in this territory, the cost of which in some places has been no less than one hundred dollars per vara with Mexican labor at seventy-five cents a day. The tunnel was commenced before the breaking out of the Washoe excitement by men of moderate means. This company, includes among other well known members, Don Teodoro Riveroll, formerly governor of this Territory, and Don Felix Gibert collector of customs at this port. The members of this company deserve credit for their outlay, and there is no doubt but that they will, if fame speaks truly, as many living witnesses can testify to the riches of this mine. It is known, that from an old shaft some ninety feet in depth large quantities of ore were extracted from a vein about one vara in thickness and another of eight inches. None of this stock we understand has yet been hawked about in the San Francisco market.

Editing a Newspaper.—Many people estimate the ability of a newspaper, and the industry and talent of its editor, by the editorial matter it contains. It is comparatively an easy task for a frothy writer to pour out daily columns of words—words upon any and all subjects. His ideas may flow in one wisby-wasby everlasting flood, and his command of language may enable him to string them together like bunches of onions, and yet his paper may be a meager and poor concern. But what is the toil of such a man, who displays his leaded matter largely, to that imposed on a judicious, well-informed editor, who exercises his vocation with an hourly consciousness of his responsibilities and duties, and devotes himself to the conducting of his paper with the same care and assiduity that a sensible lawyer bestows upon a suit, or a humane physician upon a patient, without regard to show or display. Indeed, the mere writing part of editing a paper is but a small portion of the work. The care, the time employed in selecting, is far more important, and the tact of a good editor is better known by his selections than anything else, and that we all know now is half the battle. But as we have said, an editor ought to be estimated, and his labors understood and appreciated by the general conduct of his paper, its tone, its temper, its uniform consistent course, its principles and aims, its manliness, its dignity and propriety. To preserve these as they should be preserved, is enough to occupy fully the time and attention of any man. If to this be added the general supervision of the newspaper establishment, which most editors have to encounter, the most wonder is, how they can find time to write at all.

The Private Soldier.—If there is a being in the world who is deserving of private affection and public gratitude, it is the soldier who marches as a private in the ranks of the army to fight for his country and offers his blood and life as a sacrifice for the maintainance of the Union and Constitution. And yet how seldom it is that they get the honor and reward their services entitle them to. It is the private who carries the gun; it is the private who marches on foot through the mud, frost and snow; it is the private who erects bridges over swift rivers, and rears massive fortifications; and it is the private who, with bayonet set, charges on the deadly rifle-pits and against squared columns of the enemy; and yet, how seldom it is that he receives the honors and the rewards of his noble conduct!

The Big Trees.—There are at least four groves of the so-called "Big Trees" in this State; and it is thought there are others yet undiscovered. One sees the Calaveras Trees and, full of wonder, thinks their like is not to be found. He is told, however, that a yet finer grove, inconvenient of access, has been discovered seven miles away, on the borders of Tuolumne county. In Mariposa, too, is a cluster, much more numerous, of the same mammoth species. There is also a grove in the county of Fresno. It is rather pleasant to know that this wonder of the forest is not confined to one spot in our State, and that California not only has one but several grand companies of these giants, of which the rest of the world furnishes no equal.—*Evangel.*

Linen Exports from Great Britain have nearly doubled in three years. This is one of the many results growing out of our civil war, and the stoppage of cotton supplies. Linen factories are also rapidly springing up in our own country, and the article of linen, in its various forms of manufacture, will soon occupy an important position in our home industry. Nearly fifty thousand acres of land, in Canada, have been sown with flax this year—ten times as much as last.

Kindling Wood.—It is said that 200.000 cords of pine wood are brought into the city of New York, annually, 50,000 cords of which are converted into kindling wood.

Treasure List.—The Pacific Mail Company's steamship Constitution, sailed for Panama on Saturday last, taking away treasure to the amount of $1,658,587.

The dummy engines are to be introduced in Boston for the street railroads.

ABOUT FLIES.

The common fly supplies an interesting object of study. Poets have sung of them, and besought the humane to

Save drowning flies that float along the stream.

Good "Uncle Toby," of whom all have read, never could kill one of these busy little insects. "Go," said he one day, to an overgrown one that had been tormenting him. He threw up the window sash and said, "Go; why should I hurt thee? This world is surely wide enough for both thee and me." The fly is the most intrusive of all insects. He drops into our cup of tea just as we put it to our lips. He intrudes himself into our most secret places. He is ever with us except when our surroundings are held in the frosty grip of winter. His humming is heard alike by the poorest son of toil and the gravest philosopher. Woman's temper is often sorely tried by his intrusive presence upon picture frames, furniture, and whitened walls. Flies commit suicide by hundreds in honey pots, cream cups, and all other nice tasting fluids. Indeed they appear to have a peculiar nicety of taste at times, and are often venturesome in the extreme.

Academies and learned societies have devoted much time to inquiring into their peculiarities, and inventors, time and again, have called all their genius into action to devise ways and means for exterminating the insect. Still the flies remain. They are here, there, and everywhere. If we examine one of these curious little insects, we shall certainly find much to admire in their construction, even if we cannot sing stanzas to their existence, or set the humane part of Uncle Toby toward them. Not having a microscope at hand with which to get up "original observations," we will clip a brief description from one who has enjoyed that privilege:—

Flies do not breathe through the mouth, but through a set of holes in the abdomen, called stigmata, or spiracles. By these, the air passes into beautifully constructed tubes, called tracheæ, or wind-pipes. The spiracles are furnished with a curious contrivance to prevent dust entering. The hole is closed by a sort of seive or screen, which must be seen to be appreciated. A drawing gives you some idea of its nature, but the real thing is far better; and as every one is not up to such minute manipulation, recourse should be had to micro-scopic preparations. In addition to the spiracles and the antennæ, the eye and the foot, with a description of which most readers are familiar, the proboscis of a fly is a thing to wonder at. It is more complicated than the trunk of an elephant. A portion of this proboscis acts as a lip. In addition to its lancets, a fly has teeth—yes, real teeth, like notched chisels, and as plain as pike-staves, if you only know where to look for them.

Death of Vegetation.—Some weeks ago the Union Copper Mining Company erected concentrating works near their mine at Copperopolis, for the purpose of ridding inferior ores of enough base and foreign matter to make them transportable. The smoke from these works was so charged with sulphur and arsenic that the grass and vegetation all around within the circle of 150 yards was killed, and the leaves on the oaks and buckeyes withered and dropped off. A few weeks since these works were temporarily suspended, and since then the oaks and buckeyes have put forth new buds which are now unfolding into young leaves, imparting to the surrounding woods all the appearance of early spring. One would suppose that the fumes thus fatal to vegetation would be also deleterious to human health, if not fatal to life; but such is not the case. Experience in other countries proves that the people living within the daily influence of these poisonous vapors are about as healthy as those of other neighborhoods where they are not felt. —*Stockton Independent.*

At the last sitting of the Paris Academy of Sciences a paper by M. Loir was sent in by the Minister of the Interior, in which the author endeavored to show that a quantity of electricity was produced in large factories, and might be turned to account by means of the straps which generated it by the friction in communicating motion to the machinery.

Death from Anger.—A woman at Windsor, England, lately got into a violent passion and threw her children about the floor, when a lady with whom she was living, remonstrated with her; she stamped her foot and spoke in a very loud voice. Suddenly she gave a loud scream, fell to the floor and almost instantly expired.

Hieroglyphics—Who made them?—The following description of hieroglyphics in the Sierra is from the correspondence of the Sacramento *Union*.

In our ride over our new road we had arrived at the "Yuba Bottoms," distance from Dutch Flat twenty miles. The railroad survey comes in at the same level and place, and from it I learn that the altitude above Sacramento is 5,520 feet. Pure air, more genial breezes or more delicious water than can be found here in summer one must go a long way to find. But I promised to describe a curiosity, which is very remarkable at the point of our traveled route. A friend at Donner Lake just told us of these, and how we might find them, which we did on our return, and without difficulty. He also informed us that a large flat rock near the road side on the way down the summit, is covered with the like. As, however, we did not stop to examine, or even search for these last, I can say no more about them. Leaving our vehicle at "Rock Point, No. 1" (described in my last), and going about two hundred yards toward the river, we come to a plateau of smooth and almost flat rock, covering a space as large as our new Capitol, extending to the river bank itself. Of these rocks we found a space of about two hundred feet square almost literally covered with hieroglyphics of various forms, but most of them looking like the hideous nondescripts which will be found in some of our old Indian histories, attached to treaties as the signatures of the various Chiefs. These were made many years ago, for they have become dimmed by age, and in places the rock has scaled off for yards and thus destroyed them altogether. But hundreds of them are as perfect and complete as if made but yesterday. They look as if they had been cut in the rock by a slight blow from a cold chisel. There were snakes, and these things that looked like lobsters, and then many others unlike aught that civilized man knows anything about. Our informant said he saw one that was not a bad representation of the "square and compass." But this one, though himself "on the square," "Q. S." failed to discover. They are a great curiosity, and advising all of my readers, who can, to stop and examine them, I leave it for older and wiser heads than mine to answer this question: "Who made them? and for what?

Mammon in France.—A manufacturer who has enriched himself by the most useful, and therefore the most noble, of industry, believes that, in marrying his daughter to a marquis, he elevates himself a rank higher in the social scale. The older the family of the man, the more exulting the father-in-law. Only think! for four hundred years no person in the family of my son-in-law has ever made any use of his ten fingers. If a gentleman cannot be got, a son of a burgeois family is selected. His parents have worked; it is unfortunate; but thanks to heaven! they have retired from business now upwards of ten years. We are quite easy as to him, he shall never do anything. An official is another advantageous selection. Officials do so little in our admirable country. They go to their offices to ease their consciences, their duties are so slight that they have almost the right to call themselves pensioners of the state. The most sought after amongst them are naturally those who gain the most money with the least fatigue. For instance, a receiver-general leaving college. That is what is called a very deserving young man. A hundred thousand francs to earn, and nothing to do! At the most a few signatures to make; a white negro, his representative, does all the rest. And this person is a somebody!—the third authority in the department. What father would hesitate ten minutes between an official and a man of business, even were the latter much the richer and more intelligent of the two? The official is almost a gentleman; he does so little. When a young girl is unfortunately reduced to marry a handsome young man, rich, well educated, honorable, well brought up, and gaining twenty thousand crowns a year, in business, she is a long time in explaining her fall to her school friend. 'My husband is in business, but in a very large way; a great deal of it is wholesale. He does very little in it; indeed, he scarcely goes to his office for more than half an hour a day. However, we think of giving it up altogether shortly.' The friend, who is going to marry a sub-prefect with four thousand five hundred francs a year, embraces her warmly, and says, 'Poor dear little thing. I shall always feel the same towards you. My husband has no prejudices; you must present your husband to us when he has retired.'—*About's Progress.*

A cargo of human bones, shipped from Genoa, has been seized at Hull, England. It is supposed that a large trade is carried on secretly in this kind of goods. The bones have probably been used to make knife-handles, toothpicks, and the like.

London now includes 8 parliamentary cities and boroughs, 186 parishes, covering 130 square miles and its population numbers 3,000,000.

The Value of Sunshine.

A New York merchant noticed, in the progress of years, that each successive book-keeper gradually lost his health, and finally died of consumption, however vigorous and robust he was on entering his service. At length it occured to him that the little rear room where the books were kept opened in a back-yard so surrounded by high walls, that no sunshine came into it from one year's end to another. An upper room, well lighted, was immediately prepared, and his clerks had uniform good health ever after.

A familiar case to general readers is derived from medical works, where an entire English family became ill, and all remedies seemed to fail of their usual results, when accidentally a window-glass of the family-room was broken, in cold weather. It was not repaired, and forthwith there was a marked improvement in the health of the inmates. The physician at once traced the connection, discontinued his medicines, and ordered that the window-pane should not be replaced.

A French lady became ill. The most eminent physicians of her time were called in, but failed to restore her. At length Dupeytren, the Napoleon of physic, was consulted. He noticed that she lived in a dim room, into which the sun never shone; the house being situated in one of the narrow streets, or rather lanes of Paris. He at once ordered more airy and cheerful apartments, "and all her complaints vanished."

The lungs of a dog became tuberculated (consumptive) in a few weeks, if kept confined in a dark cellar. The most common plant grows spindly, pale, and straggling, if no sunlight falls upon it. The greatest medical names in France, of the last century, regarded sunshine and pure air as equal agents in restoring and maintaining health.

From these facts, which can not be disputed, the most common mind should conclude that cellars, and rooms on the northern side of buildings, or apartments into which the sun does not immediately shine, should never be occupied as family-rooms or chambers or as libraries or "studies." Such apartments are only fit for "stowage," or purposes which never requires persons to remain in them over a few minutes at a time. And every intelligent and humane parent will arrange that the family-room and the chambers shall be the most commodious, lightest and brightest apartments in his dwelling.

Earthquakes.—The last number of the medical *Press* contains the following comments on earthquakes:

Earthquakes on the Pacific coast are likely to take a place in Etiology. We have known a number of instances in the past year, in which the effect of the shock on the nervous system of sensitive females has been distressing if not serious. In one case labor was prematurely induced, and in a second the same result was threatened. There is no such thing as getting inured to them. On the contrary, the dread of them rather increases. The Mexicans and South Americans, who have had sad experience of earthquakes in their own country, suffer the most from them here. There appears to be no serious ground for apprehension, however. In a few localities, especially in the southern counties of California, there have been undulations of the earth sufficient to endanger or destroy buildings of a certain class. But we have no authentic account of earthquakes capable of doing serious mischief having occurred in the locality of San Francisco, or anywhere to the northward.

There's Light Beyond.—When in Madeira—writes a traveler—I set off one morning to reach the summit of a mountain, to gaze upon the distant scene and enjoy the balmy air. I had a guide with me, and we had with difficulty ascended some two thousand feet, when a thick mist was seen descending upon us, quite obscuring the whole heavens. I thought I had no hope left but at once to retrace our steps or be lost; but as the cloud came nearer and nearer, and darkness overshadowed me, my guide ran on before me in the mist, ever and anon calling to me, "Press on, master, press on—there's light beyond." I did press on, and in a few minutes the mist was past, and I gazed on a scene of transcendent beauty. All was light and cloudless above, and beneath was the almost level mist, concealing the world below me and glistening in the rays of the sun like a field of untrodden snow. There was nothing between me and the heavens.

O, ye, over whom the clouds are gathering, or who sit beneath the shadow, be not dismayed if they rise before you. Press on—there is light beyond.

Passing Away.—The number of revolutionary soldiers borne upon the pension rolls had dwindled down to eighteen on the 30th of June, 1863, of whom only ten had made application for their stipends on the 4th of March of that year.

Children in Japan.—A Japanese Missionary, in the Sabbath School *Star*, speaking of the Japanese children, says:

During more than a half year's residence in Japan, I have never seen a quarrel among old or young. I have never seen a blow struck, scarcely an angry face. I have seen these children at their sports, flying their kites on the hills, and no amount of intertangled strings or kites lodged in the trees, provoked angry words or impatience. I have seen them intent on their games of jackstones and marbles under the shaded gateways to the temples, but have never seen an approach to a quarrel among them. They are taught implicit obedience to their parents, but I have never seen one of them chastised. Respect and reverence to age is universal. A crying child is a rarity seldom seen or heard. We have nothing to teach them in this respect out of our abundant civilization. I speak what I know of the little folks of Japan; far more than any other foreigner have I been among them. Of all that Japan holds, there is nothing I like half so well as her children. I shall always remember their sloe-black eyes, and ruddy brown faces, with pleasure. I have played battle dore with the little maidens in the streets, and flown kites with as happy a set of boys as one could wish to see. They have been my guides in my rambles, shown me where all the ponds and streams were, where the flowers lay hid in the thicket, where the berries were ripening on the hills; they have brought me shells from the ocean and blossoms from the field, presenting them with all the modesty and a less bashful grace, than a young American boy would do. We have hunted the fox holes together, and looked for the green and golden ducks among the hedges. They have laughed at my broken Japanese and taught me better; and for a happy, good natured set of children, I will turn out my little Japanese friends against the world. God bless the boys and girls of Niphon!

Flesh in Vegetables.—All vegetables, especially those eaten by animals, contain a certain portion of flesh; for instance, in every hundred parts of wheaten flour there are ten parts of flesh; in a hundred of Indian corn meal there are twelve parts of flesh, and in a hundred of Scotch oatmeal there are eighteen of flesh. Now when vegetable food is eaten it is to its fleshy constituents alone that we are indebted for restoring to the body what it has lost by muscular exertion. "All flesh is grass," says the inspired writer, and science proves that this assertion will bear a literal interpretation. No animal has the power to create from its food the flesh to form its own body, all that the stomach can do is to dissolve the solid food that is put into it; by-and-by the fleshy portion of the food enters the blood and becomes part of the animal that has eaten it. The starch and sugar of the vegetable are either consumed (burned) for the production of warmth or they are converted into fat and laid up in store as future food when required. Grass consists of certain fleshy constituents, starch and woody fiber. If a cow, arrived at maturity, eats grass, nearly the whole of its food can be traced to the production of milk; the starch of the grass goes to form fat (butter).

Skeleton of a Mastodon Discovered in Michigan.—A correspondent of the Detroit *Tribune*, writing from Adrian, Michigan, says that Uriah Decker, a farmer near that town, had discovered the remains of a mastodon while digging a ditch in a field. Nearly all the bones have been discovered—including the skull, greatly damaged; all but one of the large leg bones; one of the smaller leg bones; a number of ribs, some nearly perfect, and others not far from it; a broken tusk and its mate; several remarkably perfect teeth; shoulder and hip bones in good preservation; vertebræ and foot bones, knee-caps and supplementary bones in great variety. The teeth were in wonderful preservation, the brown of the molar teeth presenting conical fasercles covered with enamel. The enamel is still perfect.

Plaster of Paris for Paint.—A writer in the *Register of Rural Affairs* recommends the use of plaster or ground gypsum instead of white lead, to mix with oil for paint for outside work. If, as he says, it is equally, in fact, more durable than white lead or zinc white, it deserves to be widely known, as the plaster is very cheap and easily obtained. Take equal parts of the plaster and white lead, with oil enough to make it the consistency of cream, and run it through a paint mill. This will have a good body and very serviceable. For painting the roof of buildings, the plaster and oil answers a good purpose, and it is durable, and when rain water is collected in cisterns, it will be found to be purer than when it comes in contact with lead. Plaster is sometimes found ground very coarse, and it should therefore be run through a paint mill before it is used.

A statue of Christopher Columbus is to be erected at Madrid, Spain.

Our Summary of Mining News.

GLEANED FROM VARIOUS EXCHANGES.

WASHOE.

We condense the following from the Gold Hill *News*:—

The Gould & Curry.—The Washoe *Herald* says this company, despite the depreciation of their stock, are making extensive improvements and additions to their works, among which are the erection of a shaft house and machinery on Flowery street, near the mouth of their lower tunnel, for the purpose of pumping water out of the shaft they are sinking there below the tunnel. The engine connected with this new operation will be put up inside the tunnel, and will be set in motion by steam led in pipes from the boilers, which will be set up in the shaft house. It is said to be the intention of the company to sink this shaft from 500 to 1,000 feet below the level of the present lowest tunnel, and to drift from it into the ledge to test the value of the ores at that depth. The result of this prospect shaft will doubtless be watched for with great interest by thousands in this Territory, and in nearly all parts of the Nation.

Machinery Arrived.—The new machinery for the Omega mine arrived on the 20th inst., and will be put in place immediately, when the work of developing their claim will be pushed ahead with energy.

Kentucky Company.—The work on this company's claim continues to be driven steadily ahead. Until quite recently, work has been carried on day and night, without any intermission, by three shifts of miners. The company's tunnel is now upwards of 630 feet in length, and with the exception of the Baltimore American is the longest one on American Flat. It is now in very near to the main ledge which the company claim.

The drift from the North American shaft to the Baltic and Uncle Sam mines, is being steadily driven ahead. The drift which is being run to connect with the Baltic is so near the drift which is being run from that company's shaft to meet it, that the sound of the picking in the one can be heard in the other very plainly.

The Empress company has recently had its whim taken down, and a place graded around its shaft, where machinery is to be put. As soon as the steam engine, boiler, etc., can be obtained from San Francisco, the work of putting up the hoisting gear will commence.

Work on the Globe claim continues to be driven ahead. The company will soon be into the ledge at a place as much as 150 or 175 feet deeper than it has ever been opened before. At that depth it will probably find pay rock, and that which will pay well. Where the ledge was opened by a tunnel, run from the ravine a few rods west of where the shaft was started, several tons of rock were taken out which were crushed and yielded at the rate of $22.50 per ton. This was taken out at, or not more than fifty feet from, the top of the ledge. The drift now being run will open the ledge at a depth of at least 250 feet. At that point the company expect to take out rock which will yield at twice the rate that the rock which was taken out of the tunnel did.

The Uncle Sam keeps at work sinking its shaft. It is now down to a much greater depth than it has ever been in its mine before. A drift will be run into the ledge, and rock will be taken out soon. We expect to see rich rock from this mine as soon as a new drift is run in, and the ledge fairly opened.

The Fair Play company has struck into rock with its shaft, and is making great exertions to drive the latter down rapidly, but its progress is nevertheless slow. The shaft is now sunk about 100 feet, and is timbered down to near the bottom.

The Central Hawkeye continues sinking its shaft on the side hill west of the Midas' hoisting works. It has got down with it about thirty five or forty feet, and is now making good headway.

The Overman continues to sink down its shaft. It is now deep enough for another chamber, and probably before long another one will be opened.

Machinery.—The Minerva company has received its engine, reels and other machinery for its hoisting works, and is now busy putting them up.

The Hale & Norcross is hurying up the work on its new machinery.

The Eureka company is again at work on its claim. Some considerable quartz has been taken out, and lays along side the car track and around the top of the shaft. None has yet been worked, that we are aware of, but we have seen some taken out that looked as though it might pay.

Branch Mint.—The Branch Mint company continues the work of opening its mine at the level from which it took the rock it had crushed some time ago. The rock crushed did not yield as well as expected, and none has since been taken out to work.

Making an Addition.—The proprietors of the Succor Mill are putting an additional battery of five stamps in their mill. They are also increasing its amalgamating capacity by adding two of Hepburn's Amalgamators and one Separator.

The Chollar company is making thorough repairs on its machinery while it is waiting for its new shaft.

The Milton company is now taking out pay rock all the time. It furnishes the Union Mill with all the rock which it crushes. And we believe furnishes rock to other mills down the cañon.

REESE RIVER.

Bullion Shipments.—The amount of $27,604 was shipped by Wells, Fargo &c., from Austin during the first half of the present month.

Money Coming In.—Money is already reported as becoming quite plenty at Reeso River, in return for the Bullion sent out.

Austin's Prosperity.—The best evidence of the prosperity of Austin may be derived from the fact, that during the six months preceding July 1st, 180 houses, costing 400,000, were erected in that place; in addition to which at least $100,000 was during the same time expended in remodeling their quartz mills and putting in new machinery.

We condense the following items from the *Reveille*:—

The Big Creek mines, eighteen miles, from Austin, Reese River, are said to be paying well. The Whitlack company recently remitted two thousand ounces to their creditors in California to pay for their mill and supplies.

The three arastras being erected by Messrs. Brees, Bowes & Co., were completed and ready for operation at latest dates. They are located in Reese River, eight miles from this place, and will be run by water power.

The Oregon Mill left at the assayers 2,391 ounces of crude bullion on the 30th inst., and held about the same amount in their safe. They expected to take out the further amount of 3,000 oz. the next day. This is considered but a beginning of the bright and glowing future in the way of precious metals that will be taken out by their mills in the early future.

The George company is about to put in steam hoisting works at the mine. [This we believe is the first steam hoisting works in Reese River.—Ed.]

The Esther Claim has had two tons of rock crushed which yielded 2,400 oz. of crude bullion.

The Chinese.—These people of both sexes have already made their appearance in the towns along Reese river, where they do not appear to meet a very hearty welcome from the press.

HUMBOLDT.

The Humboldt gold diggings, says the *Register*, continue to attract many prospectors. Antelope and the cañons neighboring show rich in good smooth gold. There is considerable excitement there, at present, caused by the return of some prospectors from the new gold diggings in El Dorado District. A great many are going over.

The De Soto mine is fast growing in public favor. They have increased their force to twenty-two men, and expect to put on more as they make room for them. They are running two drifts in a southerly direction, parallel to each other, one along the foot wall and the other following the hanging wall. Another set of men are drifting from a gallery overhead. They are taking out about forty tons of rock per week. Two men on the outside are assorting and sacking the ore for shipping.

The Sheba has changed its Superintendent and Foreman. McDonald, the well-known Druggist, of the firm of McDonald & Thorne, has succeeded T. F. Moss, in charge of the office, and Prescott is back in his old place as foreman of the mine. Their mill is almost completed, and it is expected that it will be running in a few weeks.

The American Basin company is in over 300 feet with a straight tunnel, working three shifts of men.

Trinity is pushing ahead, expecting to strike the ledge in about twenty feet more.

Ore that will Pay.—At Fall's mill, ore of twenty-one ledges has been worked, which ranged in yield from $85 to $550 to the ton. From nine other ledges, unselected ore has been worked, yielding from $35 to $80 to the ton. Where is the other county where the average will show us well?

CALIFORNIA.

Sierra.—The Downieville *Messenger* furnishes the following items:

Matters in general are moving on serenely at Alleghany, and all interests thriving in an eminent degree. The Manhattan Gravel Mining Company, at Cumberland, are reported as doing well. The Winnicfred Company, near Union, and the Cal. Prospecting Co., of Washoe, have consolidated. The ledge at the works appears to be well defined, three feet thick, and is reported as very rich. This company has lately been sued by the Fac Simile Co., which claims that the Winniefred is on their ledge with their lines, and they bring suit for ejectment. The Union Co., have done little else of late than run a lower tunnel; but when they are in, it is generally expected that more big things will be heard of.

Large Sale.—The celebrated Hooper quartz lode, in Amador county, was lately sold for the sum of $350,000. This is one of the best mines in California. The revenue stamps on the deed amounted to $680.

Copper.—The Cosmopolitan Company, at Genesee Valley, had several men employed in taking out ore from their ledge. They average about eight tons per day. The ore is to be smelted by the Genesee Copper Works.—*Quincy Union.*

Copper in Los Angeles County.—The Los-Angeles *News* learns that measures are in progress to open and work the Tehunga copper lode, situated about twenty-six miles from that place. It is a rich lode, and is eligibly situated for a speedy and paying development. The "Kentucky" Company—situated in the same vicinity, are also making preparations to commence opening their mine.

Union District.—This mining district, which is situated on the east side of Indian Valley, and includes all of Light's Cañon, is according to the Quincy *Union* an excellent mining section. No less than twelve companies are at work upon different quartz and copper ledges, taking out rock for shipment, and in prospecting their lodes. During the past two weeks, over thirty tons of copper ore have been forwarded from the Superior ledge to San Francisco, with the intention of having it shipped to Swansea, England, to be smelted. If the smelting works, now in process of construction at Genesee Valley, should prove that the ore can be smelted in this State, there are several companies who will, in a short time, put up works to smelt their own rock.

More Quartz Mills.—Several parties in Sacramento will shortly erect quartz mills at Silver King which is said to be turning out to be one of the wealthiest mining districts in the State.

New Discoveries.—A prospecting party have discovered rich lodes of iron and silver, and also good coal veins, twenty-eight miles from Monitor, Alpine county.

Mining in Butte.—The *Record* at Oroville says, under date of July 23d:

Faulkner & Co., have been employed for the last two months in constructing works with the object of reviving an old and heretofore lucrative enterprise by sinking into the channel whence the river had receded and running the gravel through sluices in the ordinary placer style. To exhaust the water from the shaft, a costly pump has been fitted and a quarter of a mile of flume, tapping the Ophir ditch, fetches water to the works. The claim employes some sixty hands and is said to pay a handsome dividend upon the investment. There is ample scope for further enterprises of a like kind.

Five Persons Drowned from a Water Spout.—A party of ladies and gentlemen, who left Aurora, a few days since, in a four-horse thorough braced wagon, met with a fearful accident about twelve miles from that city. It seems as they were about crossing a ravine a water spout burst on the mountains and came down upon them before they could get out of the way, sweeping them before it. A Mrs. Medbury, and Mrs. Glen and three children were drowned. Their bodies were recovered and conveyed to Aurora. The gentlemen, four in number, were saved, but badly bruised. The four horses were drowned, and the wagon was dashed to atoms.

Treasure Receipts.—The receipts of treasure at this city, from the interior, from the 11th to the 23d of the present month were about $1,800,000, of which the Branch Mint has taken some $650,000.

Fifteen Tons of Bullion.—The quantity of bullion shipped from Virginia City from the 1st to the 23d of July inclusive, was a fraction over *fifteen tons*, valued at $735,836.

The scientific writings left by the poet Uhland are about to be given to the world.

BOISE RIVER.

Quartz Mills For Boise.—Col. Raymond, who recently took a ten-stamp mill from this city to the Boise country, has located the same on the Pioneer Ledge, near the town of Placerville, in that region.

A five-stamp mill, with all the appurtances and fixtures complete, was shipped for the Boise country, by the Oregon, on Thursday. The mill is owned by the "Great Boise Consolidated Mining Company," and will be put in operation on rock from their ledges as soon as it reaches its destination.

Messrs. Coombs & Co., of the Gambrina ledge arrived in this city on Tuesday last, from Boise. They come for the purpose of purchasing a mill and machinery for their ledge. They will purchase and return as soon as possible. This ledge is pretty thoroughly prospected and ranks with the best in that region. It is well situated upon a hill side, and stands dipping at an angle of about sixty-five degrees, and almost parallel with the surface of the hill. The peculiarity of this location renders it an easy matter to lay a great deal of the ledge bare by stripping. They have already stripped and in sight probably five hundred tons, not a particle of which will not prospect well. Some five or six tons of this rock was worked by an arastra the latter part of spring, which yielded from three to five hundred dollars per ton.

The proprietors of the Landon ledge have a mill contracted for. They have sunk on their lode about thirty feet, but owing to the delay of the machinery, which they have contracted for, they have stopped operations in their shaft for the present, and are working rock from near the surface for convenience. They are working pestles with spring-pole hammers, and by this rude method, are averaging, from selected rock, from ten to fifteen dollars per day to the hand, crushing from one to two hundred pounds each. Common Quicksilver flasks, with the top cut off are used for mortars.

The Medical Press.—The July number of the *Medical Press* has come to hand. Though rather tardy in its appearance it is nevertheless replete with matter of the highest interest to the medical fraternity. The present number is entirely original, and contains several very valuable articles, having a local as well as a general interest. This publication is well worth its subscription price ($2 in advance) to the general reader—of course no physician on the Pacific coast should be without it.

Bullion from the North.—The steamer Pacific, Capt. A. M. Burns, arrived on Monday from Portland and Victoria, with a large number of passengers. The treasure list amounted to $316,278, of which $301,278 came from Portland, and $15,000 from Victoria. The shipping of dust from the placer mining fields of Boise region is steadily increasing.

An Editorial College.—Some one has suggested the idea of establishing a college for educating young men to the editorial professsion. We doubt whether any better institution can be devised for such a purpose than a printing office. Editors, like poets, are born, not made.

Our Congressional Delegation is now on its return. Senator Conness and Congressman Shannon were to have left New York on the 13th inst. Congressmen Higby and Cole are probably now on their way hither by the overland route.

Silver in Bannock.—The explorations of Professor A. K. Eaton, of New York, in the Bannock country, have disclosed the fact of the existence, within fifteen miles of Bannock, of rich silver leads, and have incited a very general prospecting for that metal.

Fine Showing.—We have examined some very good specimens of copper ore from the Mount Zion company's lode, Mount Diablo, containing a liberal quantity of yellow sulphurets. Our readers, ere long, may expect to hear more about Clayton District.

Legal Tender Notes.

San Francisco, Friday, July 29..... 41 per cent.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

Mechanical and Patent Department.

PORTABLE BREASTWORKS.

Mr. Fay, of Petaluma, to whom we alluded last week, as having invented a novel arrangement which he styles "portable breastworks," has brought a model of his invention to this city, and submitted it to the inspection of quite a number of gentlemen, both civil and military. The invention has elicited no inconsiderable interest and comment. Many of the civil, and some of the military gentlemen, who have examined it, have expressed a decidedly favorable opinion with regard to its utility; but generally, the latter have held their opinions somewhat in reserve, evidently restrained by the influence of omnipresent red-tape.

One military gentleman, whose opinion should carry great weight in this community, as well as at the East, acknowledged that under certain circumstances this invention might prove of the highest value, and sometimes might even turn the tide of battle. The same gentleman, however, subsequently remarked that it would probably meet with little favor either from the War Department or the common soldier; that it would not be of sufficient service to warrant the expense and trouble of transportation, and would in all probability be abandoned to the enemy on the first reverse. The cost of transportation, in his opinion would prove an effectual barrier to its introduction. We confess our inability to reconcile these two opinions. It appears very much like "wireing in and wireing out;" but regular military officials are proverbially slow in the adoption of anything new pertaining to their profession.

The cost of transportation appears to be the chief objection to the practical use of this new invention. As its effectiveness, when on the field in an open country, does not appear to be called in question, let us examine into the real merits of this objection. Now, the power required to move a twelve pound cannon will move twelve of these machines, and they are far more readily handled on any kind of a field than the lightest field piece—excepting only a field covered with brush—and when in a line of march, from point to point, may be taken to pieces, and a dozen of them so transported, occupying no more space than a heavy field piece.

Military authorities have spent much time in calculating the immense weight of iron or lead expended on the field of battle in the killing of one man, resulting in an estimate that the weight of a man in lead, or the weight of the cannon in iron, was necessary to place one of the enemy *hors du combat*. Now from the admissions already made with regard to its utility, we think we may fairly assume that in ordinary conflict one of these machines will at least save as many lives as admitted estimates show that an ordinary field gun will destroy. Then in point of transportation the comparison stands as twelve to one in its favor—that is, a given amount of power brought into requisition to transport these portable breastworks, would save the lives of twelve of our soldiers, while the same power, applied to the transportation of cannon, would only result in the killing of one enemy. We presume no military officer who has examined this invention, will question that it would have been of great value to the attacking party at the seige of Lexington; to Grant at Vicksburg; or that they might be of great advantage in the open country around Atlanta or south of Richmond.

In offering his invention to the country, Mr. Fay is actuated by none but the most patriotic motives; he only desires that the government may give it a fair trial, and allow our brave soldiers such protection as it may and will afford them against the fire of the murderous rifle-pit and concealed sharpshooter. Bodily infirmities alone prevent him from taking the field, rifle in hand, with or without his invention, and he will feel himself amply repaid for any time or money expended in the invention of this, in our opinion, invaluable auxiliary to our repeating rifles and brave soldiers. Asking and expecting no pecuniary benefit from this invention, and only desiring to aid, in any way open to him, in the deadly struggle for the life of our glorious nation, he has boxed up his model and will forward it, by express, to the President, hoping that at headquarters it may receive that careful consideration which appears to be denied it in the Department of the Pacific.

We presume not one civilian in a hundred who would carefully examine its merits, would fail to pronounce a favorable judgment upon it. Government, in considering its utility, will do well to reflect upon the fact that our navy have already suffered severely from the effects of an invention which was first tendered to that department and by it pronounced worthless, but which afterwards, owing to the lack loyalty of the inventor, found its way into the harbor of Charleston, and its projector into Fort Lafayette.

The invention of Mr. Fay consists simply of a shield of the best steel plate, jointed in two pieces, placed upon two wheels, and capable of covering the persons of four or five combatants, or a much greater number when moving in column. The shield is carefully balanced on its support, and is moved very much as an ordinary hand cart. It is placed at such an angle as, when constructed of a quarter-inch plate, careful experiments have proved will be a perfect defence against the most destructive rifle ball which can be projected by any class of arms now known. A slight modification of construction and increase of weight, will render it effectual against ordinary field artillery.

A NEW PROCESS FOR WORKING ORES.—The Washoe *Herald* of the 21st says that Mr Frink, proprietor of Frink's Mill, has received intimation from the Patent Office that he has been granted a patent for a process for working ores of silver. The *Herald* further states that "the process, which will be made public in a few days, effects a great saving in the cost of working ores, besides obtaining a larger percentage of metals than by any other process now in use. Mr. Frink is well known as an experienced, practical man, and there is therefore every reason to believe that his patent possesses what he claims for it."

IRON FOUNDRIES IN OREGON.—The *Oregonian*, of a late date, in alluding to the iron works of Messrs. Jones & Co., of Portland, says:—

We doubt if there is a better establishment of that character on the coast, and the large number of men employed attest the work already commenced to be done in Portland for the surrounding country. Besides the business of manufacturing quartz mills, engines, arastras, etc., for the mining regions, orders for machinery for saw mills, steamboats and different other enterprises are crowding upon our foundries. The establishment of Mr. Monnastes has just turned out some very important castings for business purposes, and will in a few days commence on a very heavy piece, for pile-driving. At the Oregon Iron Works several quartz mills are in the course of construction, and among them one to be manufactured for a company in the Santiam mines. This will be the first mill for that locality, and will be in operation by the 15th of October, when it is anticipated Santiam will "pungle" pretty largely. We have great facilities in Portland, at the present time, for supplying orders for machinery.

IMPROVED AMALGAMATING PAN BOTTOMS.—Messrs. Mathews & Lowell, of Virginia, according to the Washoe *Herald*, have recently invented a new substance for the bottoms of amalgamating pans, for which an application for a patent has been made. This substance is formed of calcined quartz, put through some peculiar process by the inventors. Those who have used it say that it effects a remarkable saving in both quicksilver and the precious metals.

NEW WINDMILL.—Dr. E. F. Hough, of Martinez, says the Contra Costa *Gazette*, has invented a novel form of windmill, and erected one for his own use which seems to possess several advantages over those commonly employed In point of safety, degree of power and facility of control, as well as cheapness, it is thought to be so useful as to induce the inventor to get out a patent for the same.

A FOUNDRY AT DAYTON.—Geo. B. Taylor and John Hardinge, says the Dayton *Sentinel*, have completed their arrangements for the immediate construction of a Foundry in this place. The site of the same is near the river, on Mineral Rapids street. Both gentlemen are practical and experienced workmen.

Engineers' Association.

An Engineers' association has recently been organized in Gold Hill, N. T., the purpose and object may be inferred from the following extract from a communication recently furnished the Gold Hill *News*:

It is a well known fact that many of the engineers who are now employed in this Territory, are not, nor never were competent to take charge of machinery, and run it in a safe and profitable manner. This being taken into consideration by many well known engineers, and widely known for their skill and ability, resulted in the formation of this association, which was formed as much for the benefit of those owning mills and steam mining works, as themselves. It was not formed for the purpose of a "strike," or to conflict with the present rate of wages, but to prevent, if posible, incompetent persons from ruining and destroying the machinery which they are placed in charge of, and to assist mill owners and superintendents in procuring good and reliable engineers; a thing which is almost impossible at this time. The association admits none who are not competent and who cannot pase the examination of a committee of five master mechanics and engineers, who are elected by the association for this purpose. Their constitution differs materially from all other such associations, as this excludes none who are competent to pass, whether they are superintendents, mill owners or foremen. By admitting such men, it gives the association a good and solid foundation, and creates a desire to see it live and flourish, which otherwise could not be expected or looked for. So far their meetings have been public, in order to give all an opportunity to hear the reading of their Constitution and By-Laws, which none can find fault with, and which are said to be one of the best which has been adopted by any society of mechanics. It is to be hoped that those having charge of mills and mining works, will look and inquire into its objects, and give the society such encouragement as it really deserves.

IRON SMELTING IN COLORADO.—The Denver (Colorado) *News*, says that Messrs. Marshall & Co., have their furnaces for smelting iron ore in successful operation. The iron made is of a very superior quality; exceedingly strong, tenacious and easily worked. The yield of metal from the ore is about forty per cent. Though not very rich, the cheapness with which it can be worked, fully compensates for a deficiency in the yield. The ore is all picked up upon the surface of the ground; consequently there is scarce any expense for mining.

Mr. Marshall thinks that about two months run of the furnace will supply this years' local demand for iron. If so, operations will cease about the first of September. Those who want to see the works in operation should visit them before that time.

This is one of the most important manufactories yet started in Colorado. It should be made to supply every want in that line. A large share of the iron for the Pacific railroad should also be made here, where the best of iron ore is found in inexhaustible quantities.

QUARTZ MILL—NEW INVENTION.—H. A. Gaston, says the Reese River *Reveille*, is the inventor of a new arrangement of stamps in the battery of a quartz mill, and has applied for a patent on the improvement. This invention consists in combining the principle of the trip-hammer and the old-fashioned battery. Mr. Gaston has constructed a working model of his invention, which may be described as follows: Standing on a bed frame are three upright frames, in one of which is the battery of four stamps; in the center frame are pivoted the levers, that act similar to trip-hammers; in the next frame is the cam-shaft. By turning the shaft the cams here down upon the levers, raising the stamps at the other end. The action seems to be very easy and regular. It is claimed that the stamps can be made to run with much greater rapidity by this method than by the old one of the cams acting directly upon the stamps.

CARD'S AGITATORS.—The new Agitators, recently invented by Mr. Wm. L. Card, and lately put in operation at the Ogden Mill, according to the Gold Hill *News*, are proving all that was anticipated for them. The stuff that runs through them is the same that formerly passed off as waste. The apparatus is cheap and but little power is required to run it. So far as tried, the agitators have proved capable of saving per day about ten pounds of quicksilver and about half a pound of dry, well strained amalgam. This is certainly worth saving. Their value as concentrators has not yet been tested.

VOLATILE SOAP, for removing paints, grease spots, etc., may be made as follows: Four table spoonsful each of spirits of hartshorn and alcohol, and a table-spoonful of salt. Shake the whole well together in a bottle, and apply with a brush or a sponge.

HOW TO MEASURE AN AMOUNT OF LIGHT.

In the multiplicity of the various mediums for illuminating purposes, some convenient and approximately reliable method of measuring the illuminating power of various substances, may be considered a matter of some importance at the present time. We find a great difference, not only in candles, but also in various kinds of oil in use. It is a matter of no inconsiderable importance as well as interest to learn which gives the most light for the least money. The cheapest oil or candle is not always the cheapest light. The proportion of light giving power of any material, can be measured with a very great degree of exactness, in the following manner:—

Take two lamps, the wicks of which are of equal size, place them upon a table which stands a few feet from the wall, and place a stick between the lamps and the wall, in such a way that the lamps will cast a shadow of the stick upon the wall. The lamps being at equal distances from the object, the strongest flame will cast the strongest shadow upon the wall; turn down or raise the wicks until both lamps throw an equal shadow. The lamps having been weighed at the beginning of the experiment, and being so adjusted that they give an equal amount of light, are determined by the stick, are allowed to burn for some hours and then weighed again. Of course the lamp which has lost the least, contains oil of the greatest illuminating power. Candles can of course be tested in a similar manner.

SOMETHING NEW UNDER THE SUN.—We were yesterday shown the model of a novel and ingeniously arranged quartz mill. The model is one-twelfth the size of the working machine, and is very neatly constructed. The machine of a size for actual working of ores will be 22 feet in diameter, and 24 feet high, circular in form. It is calculated to be driven with horses, and the inventor claims that two horses will be able to run thirty stamps with ease, though this is but one fourth the number of stamps calculated to be placed in the complete machine. There will be one hundred and twenty stamps, each weighing three hundred pounds, standing in a circle around the circumference of the main driving-wheel, which is twenty two feet in diameter. Fixed upon the circumference of this huge wheel are inclined planes filled with friction-wheels, by means of which the stamps are lifted. When all the stamps are going, eight fall every second. The mill can be started with ten or fifteen stamps, and others can be added as required. Eight horses will run the whole one hundred and twenty stamps, and drive the whole of the amalgamating machinery, which is inside of the circle of stamps and below them. The amalgamating machinery is unlike any in use in the Territory, or in the world. We know of no way to explain it in words. We may say, however, that the pulp is stirred by agitators fastened upon the same wheel that drives the stamps. There is absolutely no machinery about the whole mill. Nothing but an upright shaft with a large wheel upon it, just like a common whim. It is upon the top of this wheel—which is well represented by the drum of a whim—that the inclines are placed which lift the stamps. The crushing part is like a Howland rotary battery on a huge scale. We were also shown by Mr. Wilkins the model of a most ingenious furnace, or rather furnace and steam boiler. The furnace is for roasting ores preparatory to crushing. It is upright, standing sixteen feet high, and is eight feet in diameter at the bottom and six feet at the top. The same fire which roasts the ore generates the steam in the boiler, which surrounds the roasting furnace, there being a space of two feet on all sides for the water. Mr. Wilkins says a boiler of the size mentioned above will generate sufficient steam to drive a forty-horse power engine. It is a most ingeniously contrived affair, and, besides roasting ore and generating steam, does all the retorting, and condenses and saves all the sublimated metals escaping from the furnace.—*Territorial Enterprise.*

IMPROVED HOISTING APPARATUS.—We notice in the *Scientific American* a cut and description of an improved hoisting apparatus, for which a patent is being taken out by the inventors, McIntyre and Reeves of Central City, Colorado. From the paper before us we judge it to be cheap, convenient, and complete. By its use two buckets can be operated at once, hoisted or lowered as the shaft is thrown into communication with one or the other set of gears alternately; thus two shafts may be worked by having a line of iron shafting extending over the mouths of both pits, one man being able to care for both buckets.

HEADACHE.

Headache is not generally a disease in the head itself but a sign or symptom that something is wrong in some other part of the body. In almost every case it is accompanied by cold feet, costiveness, disordered stomach, or a derangement of the nervous system in general—this last induced by over-mental exercise or some local irritation in a distant part of the body. In all these cases, an application to the head itself is only palliative, eradicates nothing, cures nothing. If the feet are cold they must be made permanently dry and warm, thus drawing the excess of blood away from the head. If the bowels are costive they must be made to act once every twenty-four hours, freely and habitually, without the use of any medicine. If headache comes on at regular times after eating, then indigestion is the cause, and such food should be used, both in quantity and quality, as will not be followed by this symptom. But if the feet are habitually warm and comfortable, if the bowels act once regularly every day, and if it is clear that the headache is not connected with the eating, then its cause must be found in some part of the system remote from the head itself, and it is safest and best to take competent and medical advice, if trouble, anxiety, or over-mental exertion is not the palpable origin of the ailment In most cases, very severe headaches will disappear in twenty-four hours, by giving the scalp, face, and whole body a most thorough cleansing with soap, warm water, and a scrubbing-rag; taking nothing but cold water and some kind of soup into which has been broken the crust of cold or toasted bread, and some out-door activities for several hours in the forenoon and afternoon also. Headaches in children should always be promptly attended to, as they indicate the approach of serious diseases, as scarlet fever, small-pox, measles, and other grave skin affections. Billious headache is caused by the liver abstracting too much or too little bile from the blood, giving pain in the shoulder, sick stomach, loss of appetite, depression, pain in forehead. Hysteric headache gives pain in a small spot over the eye-brow, as if a nail or wedge were driven in. Pain on the top of the skull often arises from exhaustion or debility. A pain over the brow, coming on at a regular hour daily, not lasting long, is in the nature of fever and ague, and sometimes feels as if the skull was opening and shutting. The *Megrims* are of this nature, the pain beginning at the inner corner of the eye, making it tender and red, sometimes affecting half the head, perfectly disappearing and returning at irregular intervals Sometimes hereditary. A dull aching or rather soreness, especially on pressure, at the back of the head, brow, or temples, is rheumatic headache, caused by uncovering the head while perspiring; cured by light diet, dry feet, warm clothing, free bowels, and moderate out-door exercise in clear, dry weather.

Washoe Pottery.—Mr. Lowell, proprietor of the Washoe Pottery, has been at work for two years in perfecting his arrangements at that useful institution. According to the *Herald*, he has now so far accomplished his purpose as to be able to turn out most articles of earthern ware in great perfection, and at a cost which enables him to sell at prices less than the freight usually charged upon such merchandise. He manufactures milk pans, bread pans, water coolers, jars, pots and pans for domestic purposes, in brown stone ware of really excellent quality, besides fire-bricks, crucibles, muffles, mullers, filters, and other stone ware for mills and merchants, burning a kiln of wares about once a month.

A California Enterprise.—S. G. Elliott, Chief Engineer of the California and Oregon Railroad, says the *Flag*, visited the battlefield of Gettysburg, as a matter of curiosity, and it occurred to him that an accurate map of that historical ground would be a source of public interest, and following up this idea, made a survey and map which he has just had engraved in Philadelphia. This map shows the location of the Union and rebel breastworks, where the batteries were placed, and also locates all the graves of the killed in that fearful encounter. This latter feature is something new in map making, and it shows the intensity and deadliness of the struggle at the various points as the killed of both sides were buried on the spot where they fell. On examination the map becomes of absorbing interest, and it is invaluable as a record of those three days' battles, and preserves for all future time, the vivid outlines and features of that sanguinary struggle, where the life of the American Republic hung for days suspended in the balances of a doubtful issue. The map will soon be for sale in California.

There is a species of grass indigenous to localities around Austin, Nevada Territory, which poisons horses and other animals which eat it. Many valuable horses have died from its effects.

A Long Fall.—While the workmen in the Michigan mine, at Gold Hill, a few days since were engaged in hoisting up water in a large mine bucket, the iron ring, being an inch in thickness, and which connects the same with the cable, suddenly broke, just as the bucket reached the top of the shaft—letting the bucket fall down to the bottom of the shaft, a distance of four hundred and eighty feet, breaking it into a thousand or less pieces. The bucket was a large iron bound one, and there was scarcely a piece the size of a man's hand. The *Enterprise* thinks it very fortunate that there was no one within range of the bucket during its descent, as in such a case there must certainly have been some bones broken.

Scientific Exploration.—According to the Colorado *Mining Journal*, Gov. Gilpin, of that Territory, accompanied by a small party of scientific gentlemen, has started on a tour of observation through the region known as "The Parks." The Governor, says the *Journal*, is as enthusiastic as ever in his study of the great physical characteristics of the interior. His lecture last winter, in New York, on the "System of the Parks, is pronounced, by those who had the pleasure of hearing it, very able and interesting. The present expedition is undertaken with a view of bringing into more prominent notice the peculiar features of that section, and proving up its availability as the supporter of a dense population.

Talent vs. Money.—Who ever heard of a statue being erected in memory of a man of wealth, merely. Men of learning, of talent; men and women who have become noted for deeds of charity or patriotism are often immortalized in enduring marble, and their images are gazed upon by future generations with feelings of profound respect and veneration. But what would be the feelings with which we should regard him whose only claim upon the memory of posterity was his wealth? His statue, if one should be erected, would be spit upon and reviled, and his memory would be a by-word and reproach among men.

Sliding Out.—It is a curious fact, said to be noticeable along the city front, east of Drumm street, that the filling in above is gradually pushing the piling, on which that portion of the city is built, further out into the harbor. Sometimes the piles hold at the bottom, and are merely pushed over, outwards; at other times the entire mass of earth, into which the piles are driven, is pushed bodily along, carrying with it the superstructure. Real estate has generally been considered permanent property, but here, in some parts of San Francisco, it seems to take legs and walk away.

Salt Well Near Stockton.—The Stockton *Independent* says that parties digging a well for stock water on the Sears ranch, between that place and Manley's Ferry, a few days since, after going down six feet, struck a vein of water which filled the well almost to the top, but it was as salt as the waters of the ocean. This well is on the plains, and must be thirty feet above the level of the San Joaquin river. There are five or six other wells on the ranch, all furnishing drinkable water but this one.

Gold, that fancy article of modern speculation, especially in the hands of New York brokers, has, in a measure, ceased to be a standard of value in the United States. It no longer represents the price of flour or pork, or indeed of the staple articles of home culture or home manufacture, but has become, itself an article of merchandise, being bought and sold in store, like so much flour or bacon, only in safer quarters.

The New Sugar Refinery, located at Clark's Point, on Sansome street, fired up on Wednesday, for the first time. They expect to be in full operation on Monday next. Efforts have been made by the San Francisco and Pacific Refineries to bring about a combination, with a view to a uniform tariff of prices, but as yet without success. Combinations are the curse of California, and it is to be hoped a sugar monopoly may not be added to the list.

The Keokuk Copper Mining Co., located on Mount Diablo, have recently sent an expert to examine and report upon the character and condition of their mine. That report is now before us and speaks most encouragingly of the character, present condition, and future prospects of the mine. It appears that the company has a tunnel driven in which intersects the lode at a distance of almost fifty feet from, it shows a ledge about four feet wide with a very favorable appearance of copper for that depth. The report says:—

From the innermost end of the tunnel I find that you have a shaft sunk to the depth of seventy-five feet, following the course of the lode. The combination of the lode is sulphurets of copper, and I should say that you have silver, which is of the most favorable indications for large deposits of copper, but would remark that I do not think you have enough silver to be worthy of your attention at present. The lode or vein in the bottom of the shaft is of a most favorable character, and producing good stones of copper, and has much improved in sinking the last 20 feet both in width and character. The vein is composed of the most congenial material that copper can exist in, and is at this point about three feet wide with two good and well defined walls.

The inclination of both lode and strata is dipping at an average angle of about 40 degrees to the west. This is as good an angle as any copper lode can have for large results.

I would recommend you to continue sinking your shaft until it reached 100 feet below the level of your tunnel, and then to drive north and south on the course of the lode, as I am satisfied you will find something at the depth which will pay you for the development of such levels as may be required.

After a careful examination of the strata of the neighborhood for some miles around, I find that the strata is quartzite chlorite shales, and this bed belongs as much to the sedimentary series as the shales themselves, and belongs to any system of copper lodes or veins enclosed by walls in fissures or rupture containing rock.

You have now at the surface quite a quantity of copper ore to be dressed, which will pay well for dressing if it is properly done.

In conclusion, I beg leave to state that I consider your Keokuk mining property well worthy the attention of any mining company, and think that you will soon get some good results.

Ants.—A correspondent furnishes the Marysville *Appeal* the following dissertation on ants. The experiment is worth trying: "The season is at hand when these little busy bodies enter on their labors. It sometimes happens, in spite of the great care of the housekeeper, that these pests find their way into something, such as a bowl of sugar, or a dish of meat, fruit, &c. Penetrating into every crack and cranny, and stinking most villainously when disturbed. It is a matter of some moment to know how to remove them without exciting their ire. This may be effectually done by the following means, the result of careful observation of the habits of these gentry: Ants do not desire to remain in any article of food they may invade, any more than the rebels wish to stay in Maryland. They are simply raiders—loading themselves with plunder, and then trudge off to their nest with it and return for more. It is only necessary to move the infected dish or jar from place to place, taking care not to let it remain in one spot long enough for the ants to establish anew their line of communication from it to the nest. Thus the loaded ants will be continually leaving, while there will be no reinforcements arriving. The quantity carried off will be trifling, and the rest will be unharmed. In this way I have saved whole sacks of sugar and dried meat, which would otherwise been worthless.

Good at Expedients.—In anticipation of a night assault, Gen. Baldy Smith recently ordered a large quantity of telegraph wire to be intertwisted among the trees and undergrowth which lay in front of his position. When, therefore, the rebels charged the entrenchments in the dull light, hundreds of them were tripped down unable to tell the cause. As they lay upon the ground our musketry fire kept many of them from ever rising more. As with the first line so with the second. They met the same fate. The third fared no better, and this simple agency of a telegraph wire, interlaced among the trees, played more havoc in the rebel ranks than anything else.

An old bachelor in New York offered a young lady a pony for a kiss. She gave him the kiss. He refused her the pony. She sued him. He pleaded "no consideration." The court decided that a kiss was a legal consideration.

There are complaints in Utah that the mountain streams are all drying up, and apprehensions that the late crops will not all mature.

Report on the Live Oak Copper Mine.

To the President and Board of Trustees of the Live Oak Copper Mining Company:—

Gentlemen: It is with much pleasure I receive your instructions for a report upon this mine, because months ago, during my official tour of inspection in Calaveras county, you will find the Live Oak claim, in my report to the Mining and Scientific Press, most favorably mentioned as a true and reliable vein.

At that time it seemed difficult to impress upon those concerned, the fact that vigorous working upon your present plan would result in developing one of the best mines in the district. Knowing I then spoke honestly and truly in the matter, I was willing to bide my time, being convinced my judgment would be vindicated in the end. The activity you now display in thoroughly opening a mine of which, from the first, I entertained so high an opinion, and in which I have unbated confidence, is a source of gratification to me.

My attention was first drawn to the "Live Oak" from finding such an admirable formation at the Tecumseh, the claim adjoining on the north. On afterwards visiting the Live Oak, I found the formation and rock even better than at the Tecumseh, with the additional advantage of a magnificent cast of mundic. Although you have been a long time in finding out the truth, there can be no doubt in the mind of any competent judge, that an eminent mining engineer, whose report is also before you, is right in saying "the Live Oak shows immensely on the surface, with such other indications as safely predicate final success."

To parties desirous of investing in the great copper interests of the State, which will in a few years be far in advance of all others, the Live Oak presents opportunities which cannot be questioned. The location is also favorable, affording good facilities for working, with an abundance of wood, and other requisite materials.

I have no hesitation in saying that a comparatively small expenditure of capital and labor will make this mine as safe a mining investment as any in the State.

Leon Harnett.

San Francisco, July 27, 1864.

The Hole in the Sky.—More remarkable, perhaps, on account of its singularity, is the hole in the sky (for it appears to be nothing else)—the dark space known to sailors as "the coal sack." It is well known, even to those who have never seen them, that one of the peculiarities of the southern heavens are dark and starless specks, but the "coal sack" may be termed black in comparison with the surrounding sky. It lies on the left of the cross as it faces an observer, and nearly touches the lower part of its major axis, which it equals in hight. The curious abruptness and freshness of the broken and oval-shaped outline of its entire circumference, suggests the idea of its having been formed by violence. It looks as if the canopy of heaven had been shot through. The edges of two or three folds or strata, so to speak, are seen on the left side more particularly in receding perspective, and gradually leading to and blending in what appears to be black, lightless space beyond. Placed at the south pole, and so unlike anything else in the sky, it has an aspect of special design where all around is for design. It can be imagined to be a place of exit or ingress for mighty rushing forces; the adit from light to a Tophet of outer darkness, or a "black Gehenna," with the cross shining before it.—*Vigne's Travels in South America and Mexico.*

Effect of Light on the Magnetic Needle.—Few persons are aware of the fact that light exerts a perceptible effect on the action of the magnetic needle. The Swedish philosopher, Wrede, totally excluded light from his magnetic observatory, with the exception of a subdued light at a considerable elevation vertical to the horizontal needle, while the arc was read off by a telescope, at a distance of several yards from the instrument. Means, with the same end in view, ought to be adopted in every magnetic observatory, otherwise no reliance could be placed on the observations. It was evident that the more deliberately the magnetic needle was suspended, the more obnoxious it would be to the effect of artificial light in the operation of reading off the instrument. In proof of the effect of every description of light on the magnet, Sir John Ross mentioned that, during his last voyage in the *Felix*, when frozen in about 100 miles north of the magnetic pole, he concentrated the rays of the full moon on the magnetic needle, when he found it was five degrees attracted by it.

A passenger line has been established between Umatilla and the Boise mines. The travel from Oregon to the upper country has greatly diminished.

Springfield Armory has on hand 265,000 guns—the largest number this arsenal ever held.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

San Francisco:
Saturday Morning, July 30, 1864.

MINING SHARE MARKET.

The Mining Share Market is flat and spiritless beyond all precedent. But one single instanee of improvement, and that of minor consequence, has been noted sinee our last issue; while some of the leading shares have manifested a most remarkable want of stability. Quite a number of members of the Stock Boards have beeome delinquent during the week, which, no doubt, has exerted an important influence in still further increasing the general distrust and depression which is now so prevaleut among dealers in shares. The time of returning confidence is douhtless quite in the future, and will only he reached hy a more general introduction of economical reforms coupled with a higher tone of morality than has hitherto obtained in mining management and mining stock transactions. On and after Monday hut one session of the S. F. Stock and Exchange Board will he held and that at noon.

Gould & Curry has still further and largely declined from $1,500 to $950 cash, and $940, seller 30 days.

Ophir is still on the decline, and has dropped since last issne, from $530 to $415, at which figure it sold yesterday morning. We understand from a gentleman who has just reached this city from Washoe, that the developments at the north end, hetween the 6th and 7th galleries, are highly favorable, and such as, if continuous, indicate an early resumption of dividends hy this company. The working expenses of this mine have also been largely decreased of late—nearly one half—while about the same amount of work is heing done as under the former management.

Savage has been quiet; no transactions are noted. Holders are offering it at $975, with hidders at $875.

Challar, which was steady on Saturday last at $350, dropped to $300 before yesterday's board.

Potosi is firm at 980@985, with a fair amount of husiness.

North Potosi has dropped dnring the week from $56 to $35.

North American has still further declined, $40 to $32½, but with less husiness than last week.

Imperial still remains firm at ahout previons figures. It may he quoted at $143.

Burning Moscow is still quiet, and held at about last week's figures.

Lady Bryan still maintains its activity; shares to the number of 1929 having changed hands since our last issue. This stock dropped as low as $2 on Saturday last, since which time it has gradually improved to $4¼, at last evening's board.

Yellow Jacket has been firm during the week. at from $425 to $500.

Melones again made its appearance in the quotations of Thursday and Friday, at from $8 to $10.

Golden Age and Empire is quoted at $10@$13; Daney, at $25; Mount Davidson, at $3¼; Blue Ledge, at $2½; Buckeye, at $3.

Bullion (G. H.) has met with considerable husiness at from $42½@55.

Nevada (G. H.) has still further declined; dropping from $20 to $11½.

Uncle Sam suddenly dropped, on Wednesday. from $250 to $225. The prospects of a call for heavy assessments to liquidate the indebtedness of the company, is assigned as a reason for this decline.

Michigan is quoted at $12½; Crockett at $2½; Utah at $19; and Sheha at $30.

El Dorado which sold at $4 on Saturday, gradually declined to 50 cents before yesterdays' hoard, at which figure 174 shares changed hands.

Real del Monte has met with but a single transaction and that at $1½, assessment unpaid.

Baltic which was firm last week at $25, sold at $20 on Monday and Tuesday, at $15 on Thursday, and yesterday it dropped to $10.

MANAGEMENT OF MINING COMPANIES.

The public, at the present time, is particularly sensitive with regard to all mining reports which reflect mismanagement upon any particular mine, and possibly may he too ready to receive, as truthful. reports which have found their way to the public ear through irregular channels. As a general thing, however, if any companies or the officers of any mine are thus unfairly dealt with, it is hecause of their own neglect in making their stockholders acquainted with the true condition of the miue, and its finanees.

The latest case in point is the *expose* of the officers of the Grass Valley company at Washoe, which recently appeared in the Virginia *Union*, and the substance of which we give below. In re-producing that artiele, it is hut justiee to the secretary of that company that we should state that he has made an emphatic deuial of the whole matter in a card, which he published over his owu signature, in the Territorial *Enterprise* of Wednesday last. It is noticahle, however, that while he puts in this denial, he makes no effort whatever to show what has been done with the money which has been drawn from the stockholders, farther than to intimate that the company is engaged in a lawsuit with the Potosi, and that lawsuits cost money. Why does not Mr. Hopkins give the stockholders the figures at once, and quict the public mind, whieh is now so feverish and easily excited in matters of this kind. There certainly can he no good reason for witholding them. The more public the affairs of a corporate company are made, the better it is for all who look only to honest dealings with regard to the affairs and stock of such companies.

Until the figures and proofs are given we fear it will he very difficult for Mr. Hopkins to satisfy the puhlic that the management of his company has heen honest and straight forward. Evidences are very strong of mismanagement, unfairness and corruption.

The people have become fully impressed with the idea that they have been most outrageously swindled in the management of, at least, some of the mining companies, which have of late heen prominently hefore the puhlic, and it is only hy bringing out to the world and holding up to righteous scorn all such swindling transactions that the mining community can wipe away the reproach which certain known and self evident swindling operations have heaped upon the great leading and truly important interest of the Pacific Coast. Let all who would see that interest once more placed upon a healthy hasis unite in exposing swindling operations of every description which are carried on in the name of mining. Let the guilty actors in all such transactions he held up to the puhlic scorn and indiguation which they deserve; let them he regarded as the worst of theives and robbers.

It is high time that mining operations were carried on with more prudence, economy and honesty; and the advice we have time and again given should be more carefully heeded, that stockholders should closely scrutinize the characters and anteeedents of trustees and officers. The hest way to keep them honest is to require frequent reports of the condition of the mine and the finances of the company. We append the article alluded to from the Virginia *Union*:—

C. N. Felton and S. M. Atchinson are stockholders in the Grass Valley Mining Company, and heing of an incredulous nature, and not placing entire faith in the integrity of human nature generally, and trustees in particular, they refused to pay their assessments, and in order to prevent heing "sold out," applied for an injunction to restrain the eompany from the act. An order was granted by the Court for the examination of the company's books. Such an examination has been made by an expert accountant. The result as reported to B. C. Whitmau, the referee in the case, has been plaeed in our possession, and for the purpose of enlightening those stockholders who may he lahoring under the delusion that their assessment money has been wasted, we will give a brief synopsis of the receipts and expeuditures of the company, merely remarking that figures of arithmetic, unlike figures of rhetoric, won't lie.

The total amount of assessments levied by the company amounts to the sum of $109,200. Of this sum, $39,062 03 is still delinquent, leaving $70,137.97 of cash received. Of this amount $3,837.48 still remains in the cash till of the company, and $66,309.50 has heen expended in the following judicious and economical manner.

For labor, $5,280.74; crushing ore, $379.34; Stewart & Baldwin, attorneys' fees $5,000; Stewart & Baldwin, loaned, $2,130; A. W. Baldwiu, loaned, $2,625; Judge Hall, attorney's fees, $2,500; salary of G. D. Roberts, $6,000; paid to the order of G. D. Roberts, in small sums, $2,300.50; G. D. Roberts, loaned, $397; M. C. Hillyer, salary, $3,000; M. C. Hillyer, loaned, $1,414; M. L. Sloss, salary, $2,000. Loaned to the following gentlemeu who were witnesses for the Grass Valley Company: G. W. Humphrey, $3,589.56; William Chollar, $2,885; L. Wardle, $3,754.88; J. Anderson, $1,092.10; M. R. Williams, $1,000; W. E. Goodrich, $570; Louis La Page, $50; W. Henderson, $100. Loaned to the following gentlemen, not witnesses: A. B. Dibble, $920; A. Meyer, $214.75; Jessie Barney, $30; A. B. Dibble, $200; and to various other parties of whieh no particulars are given, $6,990; paid to John Doe, (!) $500; paid attorney's fees (no name given) $500; paid out. nobody knows where or how. no aeeount heing made of the same, $10,587.58. Total sum expended, $66,300.50.

It will be observed that of the sum of $66,300.50 expended, only $5,280.74 has heen devoted to developing the mine, and $769.34 for crushing rock, *no results being given for the crushing.—Virginia Union.*

New and Ingenious Quartz Crusher.—Dropping in at the Golden State Foundry a few days since, we notieed the working model of a neat and ingeniously contrived quartz crusher, designed for hreaking up the rock preparatory to its going under the stamps. It would he impossihle to give an intelligent description of it without an illustration. We can merely say that it does its work hy means of a moveable jaw working against a stationary one, the motion heing communicated by a novel and ingenious arrangement, quite different from anything else of the kiud in use. A slight grinding motion is given to the lower portion of the jaw, which adds greatly to its efficiency. The inventor thinks that hy using two of these machines, making the first so as to feed into the second, the quartz may he reduced fine enough to pass directly to the paus. He is now constructing a working machine, which will require ahout six horse power for driving it which he designs to place in the Mechanics' Exhibition, where it will douhtless attract great attention. The inventor is Mr. W. W. Hanscom, draughtsman at the Golden State Foundry, on First Street. To all appearances the new machine promises to he of much importance.

New Machinery.—The Golden State Foundry, in this city, are now manufacturing a splendid 40-horse power engine for the Belcher, Baldwin & Abernethy company, Washoe, which will he completed in ahout six weeks. Also a 25-horse power engine with hoisting gear, for the Challenge mill, Amador county, which will be finished in a couple of weeks. This foundry is also manufacturing Blake's stone breakers, one of which machines will be in operation at the coming exhibition. The proprietors of the Golden State intend setting up one of their steam engines in the Pavillion.

River Mining throughout the State is commencing with unusual briskness, giving promise of an unusual gold harvest from now till the middle of Decemher at least. The streams have never heeu lower since the advent of white people in the State, and the only fear on some streams will he the prohability of their running light for washing purposes.

ELECTION OF OFFICERS.

Alta Coal Mining Co.—Meeting, July 27th. Trustees, J. E. Jorgensen, Romeo Mauvais, A. Expert. President, J. E. Jorgensen; Superintendent, Romeo Mauvais; Secretary, A. Martinon.

Baltimore American G. & S. M. Co.—Meeting, July 23d, 1864. Trnstees, Geo. B. Reeve, B. F. Sherwood, A. E. Head, Benj. Price and Wm. M. Stewart. President, Geo. B. Reeve; Secretary, J. H. Sayre.

Dios Padre G. & S. M. Co.—Trustees' Meeting, July 23d. President, John Sime; Seeretary, E. C. McComb.

420 Silver Mining Co.—Meeting, July 19th. Trustees, Joseph Grant, E. F. Stone, Joseph P. Thomson, Joseph Woodworth and Thos. Findley. President, Joseph Grant; Secretary and Treasurer, Thos. J. Lamb.

Whitlock & Sherlock M. Co.—Meeting, July 26th. Trustees, C. D. O'Sullivan, Richard Tohin, Patrick Hussey, M. Cody and John Sullivan. President, C. D. O'Sullivan; Secretary, John M. Burnett; Treasurer, Hugh Dimond; Superintendent, Frank Maxon; Secretary, J. M. Burnett.

Note.—Secretaries are invited to send us reports of their elections, together with any facts or information which may be of general interest concerning their works.

Dunbar's Patent Self Adjusting Piston-Packing is now being successfully introduced on this Coast. It is so constructed as to require no springs or serews; is always steam tight, with hut little friction, and never hecomes loose or leaky. It can he applied to any engine, old or uew. Mr. Charles Minturn introduced this packing in the cylinders of the ferry boat Contra Costa, in Novemher, 1863, and after a thorough test and trial of six months, adopted the same to the engines of the Clinton. It has heen in successful use on the locomotive of the Oakland railroad, since August, 1863. We are aware of numhers of others in the city and interior who are using it with universal satisfaction. It appears to he equally well adapted to large or small cylinders. Those of the Contra Costra and Clinton being 28 inches with 9-feet stroke; Chase's hoisting engine, which is also using the packing, possesses a 5-inch cylinder with 10-inch stroke. For cylinders which have become loose from wear, Dunbar's patent is the practical remedy. The agent's advertisement will be found in another column.

The Wanhoe Stock Market.—The cause of the absence of our nsual "Washoe Stock Report," for the past two or three weeks, will he discovered in the following item, which we clip from the Washoe *Herald* of the 21st inst:

Many of our suhscribers at a distance write to inquire why we do not record the transactions in the stock market in this city. For the information of all such "anxious inquirers" we will state, that for the last thirty days there has not heen half a dozen *bona fide* sales in this city. The Stock husiness is absolutely dead. We observe, however, that there is an attempt heing made to galvanize the present inanimate carcass of the stock market; hut whether it will succeed it is heyond the power of the "oldest inhahitant" to tell at present.

French Silver Coinage.—Silver hullion is so scarce in France that the government finds it almost impossihle to keep up the silver coinage in that country. The people will melt it up. As the only resort, to remedy this evil, the government has determined to reduce the commercial value of its silver coin, hy adding ahout seven per cent of alloy. The French chemists are recommending zinc instead of copper for an alloy, its cost heing less—only one fifth that of copper—also from the fact that it tarnishes less readily with sulphureted hydrogen, than copper. The absence of verdigris under the action of acidulated liquors is also spoken of as another advantage.

Large Charcoal Pit.—A coal pit is, or was recently, huruing in Genesee Valley, which, when the fire is put out, will produce about ten thousand hushels of charcoal.

The Pony express over the mountains has now been discontinued; letters are carried through, however, by the regular stages in the same time, and without extra charge.

THE MECHANICS' INSTITUTE FAIR AND PAVILION.

Active progress is being made toward the completion of the pavilion for the approaching Fair of the Mechanics' Institute. The large dome, which forms the most conspicuous portion of the structure, is nearly ready to be raised to its position, on the supporting columns which rise to a hight of forty feet from the central portion of the floor of the main structure. The dome will have a diameter at its base of 100 feet, and at its highest point will be 110 feet from the ground. Some idea of its hight, when placed in position, may be inferred from the fact that the tower of St. Mary's Cathedral, on California street, might stand beneath it without touching its skylight. This immense structure weighs sixty tons and will be raised to its place by means of jack screws. When put in position it will present a light and graceful appearance of itself, and entirely relieve the main building from the low and "squatty" appearance which it would otherwise present.

The structure as a whole, when completed, will present a most notable specimen of architectural skill and design. The chief points aimed at by the architect have been gracefulness of outline, lightness with strength, and inexpensiveness of construction. These three ideas have been most happily combined, and the building itself will form one of the chief and most imposing displays of mechanical skill connected with the exhibition. It covers 43,000 square feet—equal to an area of 430 feet long by 100 wide.

It will readily be inferred from the above that the Pavilion will form a most commodious and convenient room for exhibitors, giving ample space for avenues by which visitors may pass from one point to another without jostling or annoyance. The central space under the dome, and directly in front of the main entrance, will be devoted to the Floral Department. The horticulturalists of Alameda and Santa Clara counties have signified their willness to unite with those of San Francisco in rendering this department the most magnificent and complete witnessed upon the continent. In no other spot within the Union can this be more successfully attempted than in this city. We have here the materials at hand to eclipse, if possible anywhere in the world, the Garden of Edon itself, and no more fitting place for such a display can be found than beneath the converging arches of this magnificent dome, the largest that has ever been framed on the American Continent!

This floral display will be made upon a succession of circular benches rising from the circumference to the center, and reaching far into the dizzy hights surmounted by the dome. On all sides around, radiating avenues will lead out into the various departments of the exhibition, taking the visitor forth into a maze of industrial exhibitions, chiefly of California product, which will there be most appropriately clustered around and in close proximity to the great central display of the varied and beautiful productions of nature brought into existence and nurtured beneath the genial skies and balmy breezes of our Golden-Gated State.

The Exhibition will open on Tuesday, the 30th day of August. The management could scarcely have been entrusted to abler or more energetic hands, by whom nothing within their power will be left undone to make it, as an exhibition of art, science and industry, as nearly Californian as possible, and every way worthy of the genius and industry of the Pacific Coast. Already, we are told, the larger portion of space has been taken up and applications are coming in every day.

The most gratifying feature which has yet appeared is the fact that the evidence is fast accumulating that about every available foot of room can be filled with articles of California and Pacific Coast manufacture, without the admission of anything foreign or from the Eastern States. The array of mining machinery, will comprise about every article of Californian invention in use, including amalgamating pans, separators and concentrators, stamps, crushers, etc., also improved water, steam and magnetic engines, of California invention. Tons of ore will be there from the various mining districts, with which to test the capacity of the mining machinery. The proprietors of the Pacific Foundry have proffered a fine, improved steam engine for motive power. The great wool interest of California will be fully represented, from the raw material through all the grades of quality up to a manufacture which for fineness would do credit to any of the older states. Glass, pottery, paper, cordage, sugars, liquors, wines, fruits fresh and preserved, and numerous other manufactures and productions of interest and value will be there, to testify to the wonderful industrial progress which our young State has made during the last decade.

The Art exhibition will not be neglected. Our home artists can now take an honorable position with their brothers at the East, and have very generally promised to do their part to add value to the exhibition by furnishing some worthy specimens of California art. Many of our citizens will lend their aid in the same direction, and give interest to this part of the exhibition, by loaning numerous gems of art of home and and foreign production, to grace and ornament the gallery of the pavillion.

The "art preservative of all arts" will also find a place in the exhibition. The executive committee have awarded to the publishers of the Mining and Scientific Press the privilege of a small space for a printing office, where we shall print and publish a daily paper, which will be made a fair and full expositor of the exhibition, and in the columns of which will be put upon permanent record a faithful description of whatever new may be exhibited in the way of machinery, manufacture or art.

There is fair promise, also, that one of the chief features of the exhibition will be found in the mineral display of rare and choice specimens, of all the rich and varied regions contributing to San Francisco as their commercial center. In this connection, we cannot do better than clip the following appropriate remarks from the Reese River *Reveille*, which would be equally pertinent, coming from any other of our mining districts:

"Much can be learned by attending the fair, both of the minerals of the different districts, and the various modes of working them. Many of the miners of Reese River are at all times stopping in San Francisco, while there are thousands of residents interested in the mines or other property of this section, and all would like to have the country well represented with mineral productions at so general and important an exhibition. At the present time there is a great depression in mining, and a feeling of doubt as to their value and the safety of investments in them. To dispel these doubts, and by placing our ores where they may be compared with those of other boasted sections side by side, we may thus show to every one the great superiority that we have boasted that our mines possess over all others. It is to be expected that all the mining sections of the Pacific will be represented, and should the miners of Reese River fail to properly represent their mines, the neglect would be criminal. There are a number of cabinets of minerals in the city that would do our mines justice were they to be sent to the fair and kept on exhibition. There are also several cabinets from single mines gathered and arranged by the owners of the claims, containing the different varieties of ores with bars of silver and rock that had been burned, showing the silver dew on the surface; with a description of the mine and the rock. Such a series of cabinets, forming a Reese River collection, whether from Cortez, San Antonio, Washington, Ione or Egan Canon would have a great effect in reassuring the people of the Pacific coast of the superior value of our mines. At the exhibition, the minerals will be seen by people from all the different mines and the most distant cities, who of course will carry home reports of what they have seen, and if we do our duty by ourselves, the report will be of great advantage to us. The people of California are deeply interested in our mines, and we are at present in a great measure dependent upon them, and we should on that account make as good a show as possible."

Those who have not already made application for room in the pavilion, and who intend to exhibit, should lose no time in doing so, as the classification and arrangement for the exhibition is a work of considerable time. Those who delay must necessarily find a less favorable situation for display than those who made application early.

A Terrible Boiler Explosion at Silver City, Nevada Territory.

About two o'clock Monday morning last the huge boiler of the Union Mill, at Silver City, exploded, tearing the whole mill to atoms and instantly killing Joseph Wilde, the engineer. Never before has there been a more tremendous boiler explosion on the Pacific coast. There is absolutely nothing left of the mill. The whole frame and everything connected with it was blown clear away. Had a ton of powder been exploded under the mill it could not have been more utterly wrecked. There were three persons besides the engineer in the mill at the time of the explosion, neither of whom received the slightest scratch. Mr. E. D. Smith, who had charge of the amalgamating department, was standing within ten feet of the boiler when the explosion occurred. He says that for several seconds there was a perfect rain of iron bars about him, all of which appeared to have been blown to a great hight in the air. When the explosion occurred his first thought was to rush for the door. When he discovered that there was no door, and that he was standing in the open air, he was so astonished that he could only stand still and wonder. The boiler was an immense one, being 40 feet in length and about 56 inches in diameter, with two ten-inch flues. Some of those employed about the mill think there was water in the boiler at the time of the explosion, but the majority are inclined to think it contained no water, and that the explosion was caused by gas generated in the highly-heated empty boiler. The boiler had been cleaned out the day before—Sunday—and there had only been fire under it about two hours. About the time the fire was started the engineer remarked that the boiler contained two much water, and that he would draw part of it off. It is thought that he was mistaken, and drew it down too low. There certainly could have been little or no water in the boiler when it exploded, as not a drop was felt by any of them in the mill, nor was any sign of water to be seen. The explosion resembled that of a large quantity of closely confined gunpowder, and must have been caused by the gas within the boiler. At the moment of the explosion the engineer was standing between the furnace and the engine. He was sent with such force against the engine bed that both of his legs were cut off just above the knee as smoothly as though done with an ax. His body went some feet further and fell in the amalgamating room, where his head came in contact with some of the iron machinery, mashing the top of his skull nearly off. His legs both lay above the engine bed, where they were cut off. The engine bed (which weighs about five tons, and which was fastened down by eight bolts of 1½ inch iron, ten feet in length, reaching down through solid masonry,) was turned up on its edge, and the engine was so twisted and warped as to be ruined. The boiler was torn into several pieces. A piece of the front end, two or three feet long, was thrown eastward and fell about twenty rods from the mill. The steam drum and a piece of the boiler were thrown northward from the mill and fell some rods away. Other small pieces fell in various places about the spot. Everything appeared to have been thrown nearly perpendicularly upward. The largest part of the boiler, some twenty feet in length, was thrown to a great hight in the air and fell on the hill west of the mill and about five hundred yards away from it. Part of the flues were still in it. It struck on the hill with such force that the rocks upon which it happened to fall were driven through its end. Where it lies on the hill is between one hundred and fifty and two hundred feet higher than the mill. The fly-wheel was broken to pieces, and nearly everything else in the mill on a level with or above the floor on which the boiler stood. The governor was wrenched from the engine, flew over Mr. Smith's head and landed on Grizzly Hill to the southward. The smoke stack is supposed to have been driven upward to the hight of *over a thousand feet*. A man living in a cabin near by was aroused by the shock of the explosion and came out of doors to learn the cause. He says that after he had been at the door some seconds he saw the smoke stack fall. It fell quite near the mill. There was a well at the west end of the boiler, of solid brickwork, four feet in thickness; against this was a retorting furnace of brickwork, seven feet through, making eleven feet of brick wall; not a sign of this remains to tell where it stood. About all that remains of the building is a section of the roof that rests on a battery frame, and another little piece that fell on the agitators. The battery frame appears to have been all that saved the men who were in the amalgamating department. As it was, bars and plates of iron flew over their heads and rocks and timbers rained down on every side of where they stood. The mill contained a thirty-five horse power engine, ten stamps and eight pans—nothing but the stamps and a portion of the pans are left. The loss must be at least $30,000. The mill was owned by George Hudson, of Silver City, but was being run by parties to whom he had leased it. An inquest was held on the body of the engineer yesterday. We are told that in giving in his evidence one of the parties who had a lease on the mill said he did not consider Wilde a good engineer, but thought he knew enough about the business to run the mill. Let this be a warning to mill owners against hiring persons who by their incompetency will not only endanger their property, but imperil the lives of all about their works. It is almost a miracle that a single man was left alive in the building; they undoubtedly owe their escape to the fact of their being near to the heavy timbers on the floor of the amalgamating room, which is some feet lower than the floor on which the boiler stood, so that most of the splinters and flying iron and rocks passed over their heads. It would be almost impossible for any person who has not been on the ground to believe that such a total wreck could be made of a mill—that a whole first-class quartz mill could in a second be blown away with hardly a timber left to show where it stood—but such is the fact. The explosion shook the whole town, as though an earthquake had occurred, and nearly all the inhabitants started in alarm from their beds.—*Territorial Enterprise.*

An inquest was held upon the body of Joseph Wilde, on Tuesday, and a verdict rendered that the explosion was occasioned by an insufficiency of water in the boiler, and the introduction of cold water upon the heated surface. No one was to blame for the accident but the engineer, the poor victim of the disaster.

The above careless accident and fatal explosion claims more attention than we are able to devote in this issue, and we shall give full comments at a future time.

Good Investment.—A friend and a constant reader of the Mining and Scientific Press remarked to us, the other day, that he got the value of his year's subscription out of the paper every month. Five dollars invested in the Press will yield a better dividend than ten times the amount invested in anything else that can be named. A new volume commenced four weeks ago, and now is a good time to subscribe. Back numbers furnished when desired. No miner or mechanic in California should be without it.

Artistical.—We had the pleasure, a few days since, of examining a beautifully colored photograph of a little four year old cherub, which excels in artistical finish and lifelike appearance, anything we had ever before seen in this line. The artist was Mr. Robert Winter, at the corner of Sacramento and Montgomery streets. We understand that Mr. Winter has but lately come among us. If the picture we saw is a fair specimen of his work, he has no superior on the Pacific coast.

Consider Your Interests.—Secretaries and shareholders, who believe in conducting the business of mining with prudence and economy, are respectfully and reasonably solicited to concentrate their mining advertisements in an active Mining journal. Our circulation and terms are such as render the Press a desirable medium for all mining notices, and your patronage, gentlemen, will enable us to extend the usefulness of your special advocate.

Work Suspended.—We understand that work has been suspended, for the present, by the Mount Diablo Coal Companies, and by the company at Corral Hollow. The greatly increased expenses of hauling from the mines to the river, in consequence of the scarcity and high price of feed, is given as a reason for this suspension. The next winter's supply of coal will probably be derived altogether from up the coast.

Salt Mill.—Messrs. Gartrell & Murray have put a salt mill in operation at Virginia City, which they are running upon Sand Springs rock salt. The grinding is said to be well done, producing an article of table salt equal to the best in the market—fine and white. The mill has the capacity for crushing one ton of the salt rock every two hours. They have at present on hand over 300 tons. Here is another source of wealth for Washoe.

Fires have been raging in the mountains above Oroville, proving very destructive to the pine trees, which have recently been tapped, in that region, for pitch.

DENTAL GOODS!

Dental Importing House.

R. H. McDONALD & CO.,

DRUGGISTS.

Corner Pine and Sansome streets, San Francisco.

R. H. McDONALD & CO., DRUGGISTS,
SACRAMENTO.

We respectfully invite the attention of the Dental Profession to our large and complete assortment of Dental Goods,

DENTAL AND SURGICAL INSTRUMENTS, TEETH,

Gold Foil, Forceps of all kinds, Dental Chairs, Hand and Foot Lathes, Brush Cotton and Corundum Wheels, Pluggers, Scalers, Files.

ROSEWOOD DENTAL CASES,

Vulcanite material, Vulcanizers, Vulcanite Base and Impression Gutta Percha. A large variety of VULCANITE TEETH, Scrapers and Packers; together with a large and complete assortment of all articles of the latest and most approved styles of Vulcanite Work.

Dental Books.

We keep constanly on hand a supply of all the most approved Standard Works on Dentistry. Our efforts will be to keep a large and well selected stock of all Dental Material, so that the Dental Profession may confidently rely upon having their orders filled in the best possible manner.

THE INCREASING BUSINESS OF OUR ESTABlishment, together with the wants of the Trade, have made it necessary to establish a House in the City of San Francisco, where we will be pleased to see as many of our old friends and customers as can make it convenient to call upon us. We shall keep at both places a large and well selected stock of

DRUGS AND MEDICINES,	PAINTS AND OILS,
SURGICAL INSTRUMENTS,	PATENT MEDICINES.
DENTAL GOODS,	HERBS AND EXTRACTS,
FANCY ARTICLES,	BREWERS' AND SODA
BRUSHES AND COMBS,	STOCK,
SHOULDER & BODY BRACES,	CORKS, large variety;
LADIES' BANDAGES AND	ASSAYERS' MATERIAL,
SUPPORTERS,	BURNING OILS & FLUIDS,
GUM ELASTIC STOCKINGS,	PLASTER PARIS,
TRUSSES,	MARBLE DUST,

Together with a large and complete assortment of all Goods kept in a well supplied Wholesale Drug Store.

We respectfully solicit those dealing in our line to examine and price our stock before purchasing elsewhere.

D. O. MILLS, Pres't. WM. C. RALSTON, Cash'r.

Correspondents in New York, LEES & WALLER, No. 33 Pine street.

Correspondents in London, BANK OF LONDON.

THE UNDERSIGNED GIVE NOTICE THAT THE ABOVE named corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and with the interior of this State, the neighboring State and Territories, and with Mexico; also with the At antic Cities, Europe, China, and the East Indies; for which they are provided with amp e facilities, and in conformity with articles of association will commence operations on the fifth day of July next, at the Banking House now occupied by DONOHOE, RALSTON & CO., corner of Washington and Battery Streets.

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in all business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members:

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each Certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Trustees:

D. O. MILLS,	J. B. THOMAS,
LOUIS MCLANE,	THOS. BELL,
WM. NORRIS,	A. J. POPE,
JNO. O. EARL,	O. F. GIFFIN,
HERMAN MICHELS,	JAS. WHITNEY, JR.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

Lloyd's New Amalgamator
Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING the past week are:—From 300 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 600 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 15½ ozs., Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 76

The assay being made by Messrs. Molitor & Co.

From 2½ pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Hewston & Co.

The mine from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $-5 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney Pan, $33 34.2 per ton; and over the works at the mill, $62 54.2 per ton. Result from 10 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $-.19, Silver, $1.52, amounting to $2.71-100—equal to $361.33-100 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Deetken, at his metallurgical works in this city, obtained by the Varney Pan $-.64 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 68 pounds of ore from the Lady of the Lake Company, Leland Lode, Big Bug District, Arizona Territory, worked for C. W. C. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2 6.8-10. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.58-00—equal to $111.60 to the ton. Difference in favor of Lloyd being $4.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines, can be addressed to the care of Messrs. Kustel Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes now in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the sands in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no apprec able loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no6-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the revolving of the muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested by the general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Hoosier Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on wasie sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Steering Ships by Telegraph.—A mode of steering ships by telegraph has been recently invented. The apparatus appears extremely simple. There is, in front of the wheel at which the helmsman is stationed, a neat stand-plate like a sun-dial stand, with an upright dial-plate, upon which works a hand or indicator, which is made transparent at night by a lamp. The officer in command has a similar dial-plate before him, connected with the first by a wire. By an ingenious contrivance a sharp sounding gong is struck with every signal, so that the man's attention is called to the dial-plate before him. The number of strokes directs the helmsman what to do in a storm or battle, when next to impossible to convey a message in any other manner; and thus many battles may be gained or lives saved

Miss Hall, residing near Petaluma, was severely burned by the explosion of a kerosene lamp on Tuesday last. She lies in a critical condition.

There is no doubt that a thoroughly organized band of horse-thieves exists in the Southern interior counties.

THE INDUSTRIAL EXHIBITION.

We feel that we cannot too often or too earnestly urge upon our mechanics, and all others interested, the importance of prompt and personal exertion to render the forthcoming Exhibition that which all desire and expect to see it—a perfect success, and an important stimulus to California industry. Those who have the preliminary executive management are doing everything reasonable within their power, to make it so; but all their efforts will be powerless unless properly aided by those for whose especial benefit the Exhibition has been planned. Every one who can, should feel it his duty as well as privilege to contribute whatever he can in aid of the enterprise. Let our mechanics and manufacturers and our tradespeople of whatever class or order, begin in season to make their arrangements and preparations. It is none to early to commence now. The Institute appeals to "all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and to forward for Exhibition such articles as they may invent, discover, or make that may be useful, instructive, curious or suggestive."

The invitation is broad and comprehensive, and the object in view to be attained, is noble and useful in an eminent degree. The rules and regulations of the exhibition will be found in our advertising columns, and any farther information, which may be desired on that point may be obtained by addressing William Paton, Corresponding Secretary.

The proprietors of the Mining and Scientific Press, have made arrangements with the Executive Committee for the publication of a daily issue of their paper at the Pavillion during the continuance of the Exhibition. Inventors and exhibitors will have a fine opportunity, through the columns of that paper to present the claims and advantages of their machinery, manufactures, goods, etc., to the thousands of strangers who will visit the city during the period of the Exhibition. We shall devote the paper exclusively to matters connected with the Exhibition, and those who desire illustrations, which are not already prepared, should attend to the preparation of the same at once.

July 16, 1864.

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press
COMMENCES
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

The Proprietors of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the Press during the past six months. By aid of the accumulating patronage now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the Mining and Scientific Press substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,
An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,
And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. Mining Companies are especially favored by our rates, and careful attention is given to the publication of Mining Notices.

Office in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

Rules for Advertising Assessments on Saturdays.

Levy your Assessments upon any day Except Friday.

Advertise the Assessment Notice on the First Four Saturdays succeeding the day upon which the assessment is levied.

Appoint the day for advertising the Delinquent Sale on the Fifth Saturday succeeding the date of levying the assessment.

Appoint the Day of Sale on the Seventh Saturday succeeding the date of levying the assessment, or on any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Twelve thousand rebel prisoners are to be sent to Elmira, N. Y. Barracks are preparing for them.

The Liverpool *Albion* gives thirty-four forms in which the name of Shakspeare has been spelled.

Massachusetts is going to establish a military school, and has already appropriated $175,000 for that purpose.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the Inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, though the medium of our agency there, in order to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and Inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $30 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. In this connection we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, in fact or per, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 y'rs and 5 mos..	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

Mining Companies and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the Press upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the Mining and Scientific Press, from January 1st to July 1st, can be procured on application to the office.

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the genius of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. All parts will be united to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled—"For the Industrial Fair," and be directed to C. B. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 22d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, n check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Light, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the interests efficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own Committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

JOSEPH BRITTON,	A. S. HALLIDIE.
H. D. DUNN,	P. R. DEXTER,
E. SUNAN,	P. J. O'CONNOR,

19-tf

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Trading and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

NEW VOLUME.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent*.

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "SLIGHT COLD" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. *"Brown's Bronchial Troches"* give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in pocket and taken as occasion requires.* Agents for California

1-1m REDINGTON & Co., San Francisco.

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other Amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the lowest rates. Miners and all others interested are invited to call and examine for themselves.

NOTICE.

THE COPARTNERSHIP IN THE BANKING BUSINESS heretofore existing between Eugene Kelly of the city of New York, and Joseph A. Donohoe, Wm. C. Ralston, and Ralph S. Fretz, of San Francisco, under the firm name of EUGENE KELLY & CO., New York, and DONOHOE, RALSTON & CO, San Francisco, will cease on the 1st day of July 1864, Eugene Kelly and Joseph A. Donohoe withdrawing from the copartnership.

The business will be settled in New York by Eugene Kelly, and in San Francisco by Wm. C. Ralston and R. S. Fretz.

Depositors are requested to hand in their books for settlement at the banking house of Donohoe, Ralston & Co.

EUGENE KELLY,
(Per J. A. Donohoe, attorney,)
JOSEPH A. DONOHOE,
WM. C. RALSTON,
R. S. FRETZ.

San Francisco, June 13, 1864.

THE UNDERSIGNED, CALLING ATTENTION TO THE above card, give notice that on and after the first day of July next, they will continue the business of the above copartnership without interruption, at the old banking house of Donohoe, Ralston & Co., in this city, under the firm name of FRETZ & RALSTON, and in New York through the agency of Messrs. LEES & WALLER, No. 33 Pine street; and that on and after the 5th day of July next, they, together with D. O. Mills, J. B. Thomas Louis McLane, Asa T. Lawton, Wm. E. Barron, Thos. Bell, Jno. G. Earl, Wm. Norris, J. Whitney, Jr., Otis F. Giffin, A. J. Pope, Herman Michels, Frederick Billings, Geo. H. Howard, H. F. Teschemacher, A. Haywood, Moses Ellis, A. B. McCreary, R. M. Jessup, Samuel Knight, A. C. Wilmerding and Wm. And in accordance with law, and an order of the Board of Trustees, made on the 11th day of July, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, by Jerome Rice & Co., No. 327 Montgomery st., San Francisco, on the 3d day of August, 1864, at 11 o,clock A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

J. S. MEYER, Secretary.

Office, N. E. Corner Pine & Monigomery streets. 3-3t

Mt. Zion Gold, Silver and Copper Mining Company, Clayton District, Contra Costa County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 9th day of July, 1864, an Assessment (No. 13) of $1 per share was levied upon the capital stock of said Company, payable immediately, in United States currency, to the Secretary, at his office in San Francisco.

Any stock upon which said assessment shall remain unpaid on the 11th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 27th day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. A. G. WOOD, Secretary.

Office, 240 Montgomery street, southeast corner of Pine street, San Francisco. 3-4t

Oxford Beta Tunnel and Mining Company, Esmeralda District, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of July, 1864, an Assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable on the 12th day of July, 1864, in United States gold coin, to the Secretary, at his office, or to Thomas Lytle, Superintendent, at Aurora, N. T.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees. GEO. H. PECK, Secretary.

Office, Corner Broadway and Sansome streets, San Francisco. 3-4t

Point Arena Petroleum Mining Company.

The Stockholders of the Point Arena Petroleum Mining Company are hereby notified that, by order of the Board of Trustees, there will be a meeting of the Company held at the Secretary's office, Room 28 Government House, corner Sansome and Washington streets, San Francisco, on the fifth day of August, 1864, at 7½ o'clock, P. M. A full representation of stock is requested, as important business is to be transacted. Attest, D. S. CUTTER, Secretary.

San Francisco, Cal. July 7th, 1864. 2-5t

Pena Silver Mining Company, Lower California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of July, 1864, an assessment of three dollars per share was levied upon the assessable stock of said Company, payable on the 22d day of July, 1864, in United States Coin, to the Secretary of said company.

Any stock upon which said Assessment shall remain unpaid on Saturday the 20th day of August, 1864, will be advertised on that day as delinquent, and, unless payment shall be made before, will be sold on Saturday, the 3d day of September, 1864, at 12 o'clock M., to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEO. L. FAULKNER, Secretary.

Office, 411 Clay Street. 4

Quartz Hill Gold Mining Company, Placerville, El Dorado County, California.

Notice.—There are delinquent upon the following described stock, on account of assessment levied on the 23d day of June, 1864, the several amounts set opposite the names of the respective shareholders, as follows, to wit:—

Names.	No. Certificate.	No. Shares.	Amount.
G Hayward,	not issued	100	$40 00

Office, N. E. cor. Jackson & Front streets, up stairs, San Francisco. 3-3t

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the Mining and Scientific Press on application at the office.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 57 Government House, corner Washington and Sansome streets, San Francisco.

CHANGED THEIR BASE.—The Diamond Copper Mining Company have recorded in the office of the Clerk of the County Conrt a notice of their intention to change their place of business from Del Norte county to San Francisco.

LOW WATER.—The water in the Sacramento river is exceedingly low this season, so low that at Sacramento the tides of the Bay have a great effect—making a fluctuation at from one to two feet.

DURING the last six months the stock sales in San Francisco amonnted to $18,000,000.

BONNETS are now being made in France of Iudia Rubber, colored to resemble leghorn.

THE Sydney papers are filled with accounts of destructive floods in various quarters.

GREENBACKS COMING.—The Esmeralda *Union* of the 19th inst. is credibly informed that over half a million of dollars in greenbacks are now on their way from the East to this place. Some of the best mines iu Bodie are said to have been purchased by New York capitalists. who are coming out with greenbacks to work them on a large scale.

LUCKY AT LAST.—Our Fairplay correspondent, under date of July 18th. sends us the following: "The Buchanan Tunnel Company, near this place, has, for nearly nine years, been running a tunnel through the hardest kind of rock; and, on Saturday last, the boys struck a bed of beautiful gravel, which prospects from seventy five cents to one dollar to the pan. There is an abundance of it. We are glad that the persevering fellows have struck it at last and that it pays so well. The tunnel is about nine hundred feet in length."—*Placerville Democrat, July 23d.*

ENLARGEMENT.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Evangel.*

"MINING AND SCIENTIFIC PAPER."—This excellent and valuable paper has been enlarged by the addition of sixteen columns. It is one of the most complete and interesting mining journals in the United States.—*Daily American Flag.*

The Pavilion Illustrated.

Our Artist is now engaged upon a splendid lithograph engraving of the New Pavilion of the Mechanics' Institute, which will appear shortly. **DEWEY & CO.,**
Publishers Mining and Scientific Press.

A Daily Reporter of the Fair.

We shall publish a daily issue in the approaching Mechanics' Institute Industrial Exhibition, illustrating the progress nf the Fair by cuts and drawings and carefully written descriptions of the various inventions and articles displayed. An opportunity will thereby be offered to advertisers for bringing their inventions and business notices prominently before the visitors of the fair. **DEWEY & CO.,**
Publishers Mining and Scientific Press.

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is only equalled in one instance by that of any other. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 56 & 57 Government House, Corner of Washington and Sansome streets, San Francisco.

ELECTION OF OFFICERS.

GOODWIN G. & S. M. Co.—Meeting, Aug. 1st. Trustees, G. M. Burnham, A. J. Shrader, Wm. Smith, E. V. Joice and J. D. Burdick. President, G. M. Burnham; Secretary and Treasurer, E. M. Chapin.

SUMNER G. & S. M. Co.—Meeting, Aug. 1st, Trustees, H. W. Byington, J. C. Beideman, J. T. Saxby, E. D. Wheeler and M. J. Burk. President, H. W. Byington; Secretary, M. G. Elmore; Treasurer, J. T. Saxby.

TECORIPO M. Co.—Meeting, August 4th. Trustees, John Carperton, Ogden Hoffman, I. P. Rankin, S. C. Bigelow, Charles Wittram, Smith Brown and James H. Goodman. President, John Carperton; Secretary, T. B. Bigelow; Treasurer, John Sime.

UNION M. Co.—Meeting, Aug. 3d. Trustees, W. O. Andrews, Joseph Powell, N. B. Terwilliger, James McCoy, J. L. Downs, J. R. Boyce and William Troop. President, W. O. Andrews; Secretary and Treasurer, J. C. Hutchinson, Superintendent, George W. Taylor.

NOTE.—Secretaries are invited to send us reports of their elections, together with any facts or information which may be of general interest concerning their works.

SMELTING COPPER ORE.—To test the practicability of smelting the valuable ores with which the Pittsburg district abounds, says the Shasta *Courier*, of the 30th ult., Mr. Karskie, of Copper City, on Thursday and Friday of last week, at the ranch of Johnson & Bro., on Stillwater, subjected fifty pounds to the smelting process. The ore selected for the experiment was from the Original Bully Hall claim, and although the arrangements made were quite imperfect, the result was far beyond the most sanguine expectations, fourteen pounds of metal being obtained, containing, it is estimated, not over five per cent. dross. We look upon this experiment as very encouraging to those holding interests in the Pittsburg district, and to our citizens generally, as it demonstrates the feasibility of reducing the ore at our doors and keeping at home capital that otherwise would be diverted to other points. The estimated cost of smelting per ton we have not ascertained, but we understand that the great saving in freight between shipping the crude ore and the metal from the furnace will much more than pay the expense of smelting.

The *Courier* farther adds in reference to the Pittsburg mines:—"Although business in this section has felt the general depression existing throughout the State, there are evidences of a better future soon to dawn. Work in the Twenty-six Company's claim is being proceeded with vigorously, in the full faith of their ultimate success. The Baxter, we learn, have struck some excellent float mineral, in sufficient quantities to indicate their near approach to the ledge. The Original Williams & Kellenger and Original Bully Hill companies are daily hoisting from their works a large quantity of valuable ore, and expect to commence shipping in a few weeks. When this is begun, with a prospect of continuance, we predict lively times for Copper City."

RECEIPTS of Treasure from the interior and mining districts since the 21st ult. amount to $1,500,000. The Branch Mint during the same period has taken about $575,000.

DEW is an invisible vapor, which, chilled by the cool surfaces of the flowers, bursts into tears over the beauty that must fade.

THE MUSIC OF THE TELEGRAPH.—The wires strung along the telegraph poles vibrate in the winds, and give forth notes regulated by the force of the gale. We have often placed our ear against a telegraph pole in the still quiet of a country road, and listened to the music of the wire. In the gentle breeze it breathes forth a harmony as soft as that from an Æolian harp, a fitting refrain, one might imagine, to the sorrowful details of battle or disaster which they might at the time be conveying. During the fitful blasts of a storm an imaginative person might well suppose the alternate swelling and softening notes were in sympathy with a corresponding raging and waning battle tide, the report of which was being transmitted by a thousand wires radiating from the scene of conflict to the uttermost parts of the continent.

A NEW FLANK MOVEMENT.—The Spaniards are talking about a maritime canal around the Rock of Gibraltar, so as to avoid the passage of the straits, in case of war. The French are also much interested in the proposed project. It is said no great obstacles are in the way, and the cost is estimated at *only* fifty millions. This would be a greater flank movement on old Johnny Bull, than any which Grant has yet attempted on Lee. It was formerly the great study of engineers to surmount obstacles. Now their ingenuity is more sensibly directed towards avoiding them.

THE NATIONAL DEBT.—The chief debt of this great nation, and the one which ought to press with the heaviest weight upon our shoulders, at the present time, is the debt of gratitude which the people who stay at home owe to the brave defenders of our soil and liberties—to that great multitude of patriot heroes who have gone out in the tide of battle to breast the surging waves of treason, and "man the life boats" to save the good old ship of State from the "breakers" with which she is surrounded. Dollars and cents can never pay, in full, that enormous debt.

THE EXPORTS of Treasure from New York for the first six months of the present year have been $29,268,000, against $20,587,000 during the same period last year, and are larger than during any similar period on record, except 1859. The imports for the same period were $129,300,000, against $90,100,000, during the first six months of 1863, and $84,800,000, in the first six months of 1862.

FIRES IN THE WOODS.—Fires are said to be raging in the woods in various parts of the State. In many places they are doing much damage by burning fences, valuable pre-empted timber, etc. There is a heavy penalty attached to the crime of setting the woods on fire, and if the guilty parties can be detected they should be severely punished.

HUNTER'S CONCENTRATOR, for gold, silver and copper, which we noticed, at length, last week, is now open for public exhibition, at 526 Montgomery street, over the "Blue Wing Saloon," where all persons interested in such machinery are invited to call and see it.

[Written for the Mining and Scientific Press.]

The Coal Fields of California.

EDITORS OF MINING PRESS:—The coal fields of California were seldom heard of when feet were the rage; but now, as feet are dead, coal may be of more interest. There are but few persons who are aware of the extent of the coal basins of California, or of the instructive lessons they teach with regard to the formation of coal from vegetable matter. Few people suppose, as they travel on the bonts to Sacramento and Stockton, that they are passing over a large coal basin with different coal strata, made through just the same process as is now taking place. Large extents of tule are year after year decaying and forming new matter for additional coal beds, until some upheaval in the ocean shall send the salt water again over our plains, as has been the case many times already, as the different coal strata will testify. The grain of our coal shows the tule leaves distinctly; and in no part of the world have I seen as reasonable indications from which to comprehend the theory of the origin of coal. From the foot hills of the Sierra to far out in the Pacific Ocean, is the coal formation seen, but the upheaval of the Coast Range and Mt. Diablo have destroyed the southwest portion of them, and have left the asphaltum as a residue. The coal dips to the San Joaquin, following nearly the descent of the hills to the plains, where it flattens as the plains flatten. It has been formed in a few places on its northern crop, but has not been worked there much as yet. The mines near Mt. Diablo have been worked for some years, and are now sending to market about two hundred and fifty tons per day. Most of the coal has been taken out quite shallow, and would not sell in other countries; but now the workings are getting deeper, and the coal improves in quality accordingly. As soon as the companies have finished their crop coal, they will probably find good house and steam coal. There is already a marked improvement as it deepens. It being new and owned by poor men, there has not as yet been much improvement made; the coal is handled too often to come to market in very good shape, and the cost of mining is too great to allow of much profit.

The character of the coal also is interesting. There is none such found on the Atlantic seaboard. At its first discovery it was called lignite by our scientific men, but now it is called cretaceous. There is considerable lignite found in California, on the summit of the Sierra. On the Dutch Flat road there are tertiary deposits in its original formation, and I believe the first found coal formation in so high an altitude, independent of volcanic upheaval. There is also tertiary and lignite on the sea coast, but it has been tossed about by volcanic action. All the coal on the Pacific is white ash coal; it does not cement, consequently will not do for blacksmiths, though at first discovery some of them are sure to pronounce it better than Cumberland coal. There is considerable money foolishly spent in trying to find coal of a character different from that which the geological formation will warrant; but more of this another time, from

CLAYTON.

[Written for the Mining and Scientific Press.]

Letter from Owensville.

EDITORS OF MINING PRESS:—The mineral wealth of any country, when so apparent a that of this region, will never fail to elicit the enquiry from the newly arrived, of "How and what is the best and most available means by which to extract the hidden wealth?" We all know that it takes capital and time to work and develop, even only one of our many mineral deposits, and we naturally look around us to see where the capital is to come from. The chief portion of California capital which has not been invested in real estate, is already employed in the mines of California and Nevada Territory. There are many mines throughout the country, and in this portion especially, that are now lying idle for the want of capital with which to work them. Here, as in all newly discovered mines, a few men who have the individual means and energy to develop some of their richest mines are at work; although their work is slow, still it cannot fail to be remunerative in the end; and in due time there will undoubtedly be an influx of capital adequate to the wants of the country. But little would be required to place them in a paying condition.

THE MINES.

To speak of any individual mine as being the richest, as is often the case with correspondents, would be absurd. The true wealth of no mine is known until it is thoroughly developed, or at least worked to the water line. Several companies have been, and some are now at work, upon their ledges; but doing, so far as I have seen, no more than what may be called surface work. In no one instance have they exceeded the depth of eighty feet; but in almost all cases they have found their ledges to improve. The formation is such here that it requires the use of powder and drills, it being a species of trap rock mixed with granite and slate. The ledges usually run northerly and southerly; some ledges, however, run east and west, which show, as do the others, an abundance of rich mineral. Not only are the mineral deposits found to be rich in one locality, but they are equally rich wherever found in this range of mountains, throughout a space extending north from Owens Lake at least one hundred and fifty miles and including both slopes of the mountain.

THE MILLS.

The works now in use, and also those being erected for the purpose of extracting the precious metals are not of the most extensive character, or not in all instances of the right kind. In Russ District the Union mill has been vainly endeavoring to extract the precious metals from lead and antimonial ores by amalgamation, whereas if they would erect furnaces, assort their rock and crush only that portion the most free from lead and antimony, and smelt the other portion, they could look for a good return. Perhaps they think thirty and forty dollars per ton will do, but as their rock undoubtedly contains more, why not save it all?

The Ida mill has been crushing Santa Rita rock, for several days past, with what success I do not know. Some people here predict that she will fail in saving the metal, as has been the case before on other and equally as rich rock. The new mill at San Carlos is expected to make a good run. She is certainly working good rock.

ROASTING FURNACES.

Two large furnaces are being erected near San Carlos, which will be, when completed, capable of doing constant work. They will not be ready for work until December. The builders having met with success in erecting a small furnace, have concluded to try it on a larger scale.

SAW MILLS, ETC.

Both saw mills are now running and turning out a large supply of lumber. Every thing looks dull about town to those who have nothing to do, but at no time has there been more work going on in the valley than at present. Hundreds of men come here to get work; they stop in town and because they see but little work going on, and cannot get employment at once they leave and report the country dull. Constant employment for the many can only make things look lively, and no mining camp was ever yet known to always have that at hand.

NEW ARRIVAL.

OWENSVILLE, July 24, 1864.

Meteors.

There is hardly any rational way of escaping from the conclusion, that all space must be as thickly peopled with these aerial fragments as is the air in a room with particles of dust. When the rays of the sun shine through a narrow chink, all these minute particles in the course of a ray are made evident, and so these atoms of the dust of the space are from time to time seen, not indeed when the sun is shining, but when in the dark but clear nights we watch the heavens, and note all the shining points that shoot out from the blue vault, and seem to disappear as they came. Probably, in the majority of cases, where there is merely this momentary line of brilliant light, the atom has been made bright by the friction produced and heat evolved in passing the thin air overhead. Heated intensely, the whole has become dissipated, being either broken up or oxydized into particles quite invisible. In other cases, where the magnitude is greater, the time longer, and the phenomena more marked, a sensible mass of it is caught up, and though attracted to the earth and approaching its surface, yet fails to reach it, being also broken up into minute fragments of dust by the enormous friction met with before it can reach the actual land and sea. That in their course downward these masses are occasionally swayed about, taking a zigzag or irregular path, seems certain; and now and then the actual broken fragments are seen to approach the earth, though they cannot be picked up on the spot where they appeared to fall. Now and then, however, a giant appears—a Titan among the minnows of the sky; molten on the surface by the friction, it yet succeeds in retaining its natural state, until at last it falls to the earth a solid, though not unbroken mass. Masses of magnetic iron and nickel, with occasionally other metals, and also masses of sandstone, have been picked up on the earth, after falling from the sky, and have been examined by competent chemists. They are the materials that people space; they are fragment of matter widely and perhaps universally distributed; they are materials collected or left behind by the wild comet in its course; they may be the food of the sun, the fuel conveyed in some mysterious manner to keep up that burning mass that is the source of light and heat, whose rays give life, and of whose atmosphere we are now beginning to learn something from the experiments recently made on light. And these materials accord pretty well with those common on the earth. They afford no new metal or mineral. They are combinations not unknown, if not common, of very familiar ingredients.

SOLDIERS STRIKE A GOLD DEPOSIT.—A letter of late date from Meade's army says: Two chimney-stacks all that remain to show the former site of a plantation house, were pointed out to me by General Foster. He tells me that a miserly old widow named Rice lived there "lang syne." She made her slaves catch fish from the prolific waters of the James, just before her door, which were sold for good prices in the Richmond market, so that she was enabled to hoard up money. Some time since she died, and her relations eagerly sought to get the fruits of her parsimony; but to their surprise, none of the coin could be found. The circumstance remained unexplained until our soldiers established themselves upon the late old lady's lands. Some of the lads, hungry for fresh fish, began digging about the chimneys for angle worms, which there abounded, of particularly tempting taste and size to eel and catfish. Suddenly one of them struck a vein of gold and silver, which was confined to a common iron pot, which doubtless had done good culinary service in its day. Here the old woman buried her treasure, which the soldiers disposed of so hurriedly that it is scarcely probable its precise sum will ever be known. There were eagles, half eagles and quarter-eagles, besides pieces of larger value and quantities of silver coin. Some say there were as many as $20,000, and others not more than $1,000. At any rate there was great scrambling and no attempt at a fair division, the finder being so astonished at his good luck that the spoils were gone before he could recover his senses. I saw specimens of the "find," which looked very bright and winsome—especially at the present Wall street quotations.

THE Shasta *Courier* says that springs and wells, in that region hitherto, supposed to be never-failing, are drying up. It is feared that all in the valley will fail before rain comes.

The Mining Panic—Fluctuations in Silver Mining.

Two years ago, in writing of the excitement which pervaded this entire State upon the then new theme of silver mining, whilst admitting the probability of ultimate good results in a general State and National sense, we cautioned individuals against allowing themselves to be hastily led away from the humbler yet surer and far more pleasant vocations into which society here was gradually settling down. We prophesied that capitalists would possess themselves in some way of all the valuable discoveries of labor, and that even capital, in a business traditionally so uncertain and fluctuating as silver mining, would meet with many rebuffs and disasters, which, when the times became ripe for the final crash, would involve thousands of men besides the mining adventurers. These things are now in course of verification. The bubble raised by the thousands of speculators, which for two years has kept the State in a condition bordering on madness, has exploded. Confidence in silver mining is shaken, and before it can be restored the whole business must be reformed. The age of wild-cat stocks has gone by. "A child once burnt avoids the fire ever after." The really good and valuable mines will suffer with the thousands of humbugs. Indeed, it is found that the very best of them have been overrated. They have infirmities which can neither be seen or guessed at from anything visible on the outside, and though the dividends may pay four per cent one month, no man knows what the morrow may bring forth. There are "horses"—dead horses of huge proportions concealed in the richest veins, and subterranean water channels which defy the power of machinery. Then, too, the broadest veins run to a sharp point sometimes, and just when the company is in the fullest blast of prosperity, employing hundreds of men night and day, and declaring the largest dividends, the Superintendent makes the startling announcement—"No more pay rock; 'horse;' vein run out!" The hands are discharged, shareholders become alarmed, the stock is thrust upon the market in haste, and the panic becomes universal. We suppose the Gold Hill silver mines and the Gould & Curry have paid about as well for the last two years as any mines ever worked in any country. They have yielded their holders from two to three and a half per cent on investments, steadily. Of the more than five million dollars produced from the latter mine during the last year, more than a million and a half has been clear profit. The net yield in some of the Gold Hill mines has been proportionally larger. These have been the successes in Washoe silver mining. Compared with the failures they are as one to five hundred. The Wide West, Real del Monte, and Burning Moscow, all two years ago thought to be as valuable as the best, have proven but sad failures, involving hundreds of worthy parties in ruin. But even these are nothing to scores and scores of others, which at Reese River, Aurora, and elsewhere, have attracted poor adventurers, become popular on the reputation of the Comstock ledge, and ultimately wasted the hard earnings of thousands of our people who invested in them when the excitement ran high.—[We think the writer, albeit he has given much sound sense in treating this subject, is rather sweeping in his assertions in this immediate connection. We give his language, however, as we find it.—ENS. PRESS.

Men who took the trouble to inform themselves about the history of silver mining in Mexico and South America are not much surprised at these results. While at times it has happened that no business has more amply rewarded capital, these have been exceptions and not the rule; even in the best localities failures have been numerous, and the very richest mines have ruined more than they have rewarded. It is is said, on good authority, that the great mine of La Luz, in Mexico, produced yearly, for five consecutive years, a net profit of $5,000,000 to its owners. It then "run out," and and became worse than a dead loss. In 1808, there were 500 mining establishments in active operation in the country, working rock from 4,000 different veins; yet the annual production of silver was but $20,000,000, though a far greater sum than that must have been expended for labor, machinery and supplies. A few got rich; the vast majority sunk capital and wasted their labor.

The *London Quarterly Review*, for April 1864, furnishes some valuable and interesting statistics of two of the most noted and profitable Mexican mines. The first is the Real Del Monte, situated in the State of Durango. This mine attracted but little attention until 1749, shortly after which it fell into the hands of one Count de Regio, who followed it down through water to the depth of 600 feet from the surface, employing five thousand mules to pump and keep it dry. He worked it for nearly thirty years, and up to the time of his death, had taken out $15,000,000 in silver, realizing immense profits. His mule power failing to keep the water out of the mine, it was abandoned and lay idle until 1824, when an English company took possession and introduced powerful machinery. After getting to work at enormous expense they soon found the vein even richer than they expected; but after working for 23 years, and producing $10,481,475 worth of silver, they found their expenses greater than the proceeds of the mine by $5,000,000. The company was then dissolved and its property all sold to a party of Mexican adventurers. These last settled down to work on a lead which had for half a century been abandoned for its poverty, and which they called the Rosario. At the end of twelve years their net profits were nearly nine millions of dollars—nearly five millions of the amount having been realized in the years from 1857 to 1863. The gross proceeds of the mine from 1851 to 1862, inclusive—a period of twelve years—were $18,488,278. The cost of working, was $9,643,063. Profits, $8,835,205. From this statement it must be inferred either that the ore of the Rosario mine was far richer than that of the Gould & Curry, or that the costs of working were much cheaper in the former than the latter. The net profits in the Gould & Curry have been but about 33 per cent. of the gross proceeds, while in the Rosario, for a term of 12 years, the net profits were 48½ per cent. of the gross proceeds of the mine.

The success of one or two companies in Mexico in 1835-6, created a mining excitement in Europe, which ran very high among London capitalists and adventurers. In 1837 these Englishmen invested $15,000,000 in mining enterprises. It was nearly a total loss. Yet good came of it in a general way. New towns and settlements sprang up, roads were built, and the country obtained temporary and permanent advantages, which will be realized under a regime of more moderate expectations and more practical workers. And so it will be with Washoe. The crash is inevitable. The thousands *must* be worsted for the present; high hopes must languish and go about in mourning; shyster lawyers and gloved brokers in wild cat stock, with all the multifarious horde of gambling vagrants who follow after the chase for gold where the trail is hot, must be exchanged for a different and more useful class of men. Practical knowledge, by and by will step in to the aid of earnest industry, titles will be settled, and then the new start will be fairly begun. Till then, we fear it will go a little hard for Washoe. Meanwhile, however, all has not been for evil. These discoveries and the wild hurrah for the new god Silver, have given us solid and admirable roads across the mountains, planted towns on the other side, and laid the solid foundations, we trust, for a new State in which the American character will not suffer deterioration.—*Stockton Independent.*

THE LAKE SUPERIOR GOLD EXCITEMENT is still on the increase, and is attracting a large share of public attention in the north western states. The Detroit *Tribune*, of a late date, says:—

There has been no less than four steamboat arrivals from Lake Superior since Saturday. The most important item is that pertaining to the auriferous deposits. The fact of the existence of gold in quantities that will repay the labor of mining is no longer a matter of doubt, and the excitement at present surpasses that growing out of the silver-bearing lead discoveries. The "pure stuff" has been found in section two, township twenty-seven, range forty-eight west. The excitement growing out of this discovery is very great.

The most important discoveries thus far are those in the tract on section ten, in township fifty north, range twenty-eight west. Here a vein of iron pyrites six feet wide has been discovered, the pyrites being exactly similar in appearance to those first brought from Lake Superior, which were analyzed last winter by the most accomplished chemists in Philadelphia, and found to be rich in pure gold.

The geology and topography of the country, where these discoveries have been made, are considered highly favorable for an extensive development of mines containing this precious metal.

THE WASHOE.—This boat is fast becoming a favorite with the traveler, and every attention is paid to the wants and comforts of passengers. The, tables which are presided over by Mr. Grush, are spread with every luxury which the season affords. This culinary Sage has raised the art of cooking into a profession. In regard to the speed of this and the old line boats, there is not much difference. The latter have some advantage in crossing the Bay, but in threading the Sacramento, Capt. Kidd takes advantage of the short turns and lands his passengers fully as soon as his competitors.

Formation of Mineral Veins.

Mr. E. J. H. Broad, of Liskeard, under date of June 20, writes to the *London Mining Journal* as follows: Having of late read such abstruse theories as, for instance, of those who believe the earth was ejected from the sun, just as a spark would fly from a smith's anvil; and the sun's influence, through the number of years which it has existed, having brought it to its present state of perfection; it is far more feasible to think that the Divine Being, to whom we owe our existence, created the earth of its present density, and then gave it motion. The motion I mean in this case is the susceptibility things have of being altered—anything out of its element must decompose and disseminate the atoms of matter of which it is composed to their simple state. All organic substances are in one continuous motion, and all inorganic substances (out of their element) are decomposing by the principal destructive agent in nature (oxygen). Thus is the whole universe in one continuous motion. After substances have existed, and can no longer exist, in their present form, nature brings all those atoms to their simple state to join others in the formation of a new substance. From this hypothesis I infer that mineral veins are formed; the water carrying those atoms which are congenial to it through fissures of the earth, and continues to run until it meets with a strata of ground impervious to it; there it meets with other waters carrying in solution that which has affinity for it. Consequently, from a law in chemistry, that two bodies unite to form a third, distinct from either of the combining bodies, a precipitation takes place; the water runs on, and from the downward pressure, eventually forces up at a lower level, and forms those beautiful springs which are so beneficial to mankind.

Now, in deep sea soundings it is the general impression that it is owing to the under current we find no bottom, without knowing why the under current should exist. It appears to me that all submerged substances float at a certain depth for this reason. The superincumbent pressure of water, conjointly with the decreased attraction of gravity, renders the water equal in density to the submerged body, consequently it floats in equilibrium. If such is the case, we can easily account for those huge rocks rudely placed so far inland; and I believe it to be an established fact that the earth is continually changing its form. Hence it is those large stones were broken from the rock and floated until they found the acclivity of land, where they might have been tumbled about by the action of the water, until the crust of the earth assumes another form, the water recedes and leaves them dry. No doubt the change which takes place within the crust of the earth is owing to the formation of substances. Why not, on the same principle that vegetable substances petrify, should not the beds of rivers, in which are imbedded shell-fish, &c., petrify? then we might easily account for shells being found in rocks. I trust no one will be so presumptuous as to attempt to unfold the mysteries of this mysterious world, nor jump hastily at conclusions, before asking themselves the reason why.

A Kind Word for "Mother."—Despise not thy mother when she is old. Age may waste a mother's beauty, strength, limbs, scenes, and estate; but her relation as mother is as the sun when it goes forth in its might, for it is always the meridian, and knoweth no evening. The person may be grey-headed, but her motherly relation is ever in the flourish. It may be autumn, yea, winter with a woman, but with the mother, as mother, it is always spring. Alas, how little do we appreciate a mother's tenderness while living! How heedless we are in all her anxieties and kindness! But when she is dead and gone, when the cares and coldness of the world come withering to our hearts, when we experience how hard it is to find true sympathy—how few will befriend us in misfortune—then it is that we think of the mother we have lost.

Don't Work.—The movement of the "loyal" ladies in the East, to wear calico and do away with silks, etc., don't work. The New York papers say the movement is a failure. We are sorry to hear it.

The Treasure Shipment by the Uncle Sam on Wednesday was $1,365,210; the excess, thus far, this year over last is $8,843,874.

A Practical Miner on Scientific Mining.

A writer, who signs himself "Practical Miner," sends the following to the Mariposa *Gazette*:—

Although mining has been carried on successfully for centuries, and like every other branch of business, whether mechanical, artistic or scientific, still admits of many and important improvements. Yet to us, who have learned what little we know in California, it is amusing sometimes to hear the experiences of men who have spent a life-time in scientific research, and have as yet failed to make mining profitable. The trouble appears to be that their's is a *scientific* process, they carry out the old system in vogue in England, Germany and Mexico, taking it for granted that to us it may appear scientific. It is probably well for us to see the contrast, or none of our many rich mines would pay the expense of working. We see this fully confirmed in this country. It is needless to cite instances, as all are well aware of the facts.

Sometimes they persuade the extensive holders of feet in San Francisco, that they can make the sulphurets pay from $800 to $1,500 per ton if they could manage it their own way; and often the holders of feet regret having learned their way—for developing mines is rather expensive—and the consequence is they *devil-up* the entire enterprise; or they conclude the *adverse lores* are very difficult to work, they cannot be made profitable outside of their laboratory.

The only way mining can be carried on successfully is by hard work—every man engaged in it to be a working man. The only important improvement as yet made in extracting ores has been studied out by these men, and every *practical* man admits that they are improvements.

Barrel Quartz.—On Laidlaw's Hill, forming the eastern division of the Waverley Gold District, Nova Scotia, has been found in great abundance, a peculiar variety of quartz-rock which has acquired a wide reputation under the name of *barrel-quartz*. Mr. Philips, of London thus described it:

The most remarkable deposit of auriferous quartz hitherto found in Nova Scotia is undoubtedly that at Laidlaw's Farm. The principal workings are here situated near the summit of a hill composed of hard, metamorphic shales, where openings have been made, to the depth of four or five feet, upon a nearly horizontal bed of corrugated quartz of from eight to ten inches in thickness. This auriferous deposit is entirely different from anything I had before seen, and when laid open presents the appearance of trees or logs of wood laid together side by side, after the manner of an American corduroy road.

From this circumstance the miners have applied the name of "barrel-quartz" to the formation, which, in many cases, presents an appearance not unlike a series of small casks laid together side by side and end to end.

The rock covering this remarkable horizontal vein is exceedingly hard; but beneath it, for some little distance, it is softer and more fissile. The quartz is itself foliated parallel to the lines of curvature, and exhibits a tendency to break in accordance with these striæ.

The headings, and particularly the upper surfaces of the corrugations, are generally covered by a thin bark-like coating of brown oxyd of iron, which is seen frequently to enclose numerous particles of coarse gold, and the quartz in the vicinity of this oxyd of iron, is itself often highly auriferous.

The corrugations, or folds, appear to be accounted for on the hypothesis of a lateral thrust producing the undulations. The value of the barrel quartz has been not so much from its large average yield of gold as from the comparative cheapness with which it has been mined. It appears from the statements in the Chief Gold Commissioner's Report, dated Jan., 1863, that each miner on Laidlaw's Farm averaged for the last three months of the previous year over nine tons per month, while in other districts the average monthly product per man was from two to three tons. The average yield of gold was small, about five pennyweights to the ton; the maximum being three ounces, not including remarkable discoveries, like that of the Chebucto Company, of a mass of this quartz, yielding as already mentioned in the introduction, for a volume of not over two cubic feet, over $4000 in value, of gold.

The only refreshing thing that came to note yesterday, says the N. Y. *World*, was an incident that occured between two acquaintances. "Can't you propose something cooling?" remarked one, to which the other replied, "Yes, lend me fifty dollars!"

The Pope has sent $1,000 to the Sanitary Fund. The amount was equally divided between the Federals and Confederates, as directed by the donor.

How Age Changes Us.—These who are old enough to know the ways of the world will agree with us when we say there is much truth in the following paragraph written by Sir E. Bulwer Lytton. It occurs in one of his essays:

There was one period of my life when I considered every hour spent out of the capital, as time wasted; when with exhilarated spirits I would return from my truant loitering under the summer trees, to the smoke and din of London thoroughfares. I loved to hear the ring of my own tread on the hard pavement. The desire to compete and combat—the thirst for excitements opening one upon the other in the onward march of an opposing career—the study of man in his thickest haunts—the heart's warm share in the passions which the mind, clear from inebriety, pauses to analyze—these gave to me, as they give to most active men in the unflagging energies of youth, a delight in the vista of gas lamps and the hubbub of the great mart for the interchange of ideas. But now I love the country as I did when a little child, before I had admitted into my heart that ambition which is the first fierce lesson we learn at school. It is partly that those trees never remind us that we are growing old. Older than we are, their hollow stems are covered with rejoicing leaves. The birds build amid their bowering branches rather than in the lighter shade of the sapling. Nature has no voice that wounds the self-love; her coldest wind nips no credulous affection. She alone has the same face in our age as in our youth. The friend with whom we once took sweet council, we have left in the crowd a stranger—perhaps a foe! The woman in whose eyes, some twenty years ago, a paradise seemed to open in the midst of a fallen world, we passed the other day with a frigid brow. She wore rouge and false hair. But these wild flowers under the hedge-row—those sparklings in the happy waters—no friendship has gone from them! Their beauty has no simulated freshness—their smile has no fraudulent deceit.

"Hope On."—The student toils in his lonely attic, wearing his life away with the "midnight oil" pouring over books that

> "Turn back the tide of ages to its head,
> And hoard the wisdom of the honored dead,"

hoping with the magic power of eloquence, the witchery of sons, the vagaries of philosophy, or the voluminous flow of imagination all, as yet, unsyllabled, undreamed of and unsung, to startle the world.

Hope on, whispers the heart. He hopes and waits, unhonored and unnoticed. He labors and toils, and despairs, and sinks to rest on the right arm of his strength—while another, far less of a giant in intellect, fills all the heavens with the brightness of his meteoric blaze. The sculptor chisels at the uncouth stone—destroying and reproducing—encouraging and disheartened—cursing the visions of beauty which haunt his midnight hours, and which he would give the world to catch. The artist plies the pencil in the studio, blending the yielding colors, in increasing and subduing the light—now at the hight of hope—anon at the depth of despair. The adventurer treads the mazes of the forest, or parts the long prairie grass and gazes on the undiscovered regions only in fancy.

Hope on! whispers ambition. They wait. A Powers startles the world—a modern Michael Angelo "fills out his short cycle"—and a De Soto, with his Eldorado dreams unrealized, while the torch-light flashes up on the waves of the Mississippi, is lowered to find rest upon the bosom of the cold waters.

Hope on! murmurs Faith to the dying Christian. His dark eye loses its luster, his lips quiver, delicious strains float upon the air, winged messengers people the room, a short struggle and he is gone. He waited! He waited long and patiently. He suffered and was strong; and while the rest who waited and played like children with the sea shells upon the beach of eternity were swept away one by one, he was at rest in that glory which at times was so dimly visioned to him when he knelt in the quiet twilight in prayer!

What They Say of us Abroad.—The London *Times* says that there has been no such fighting in the history of the human race as that between Grant and Lee in Virginia. The Paris papers also think the recent battles in America surpass everything of which history furnishes an account. Xerxes, Darius, Tamerlane, Attila, led larger armies into battle, but never did these armies fight for weeks together, without giving signs of lassitude and discouragement.

A Connecticut farmer has discovered that his cows have been regularly milked by black snakes, who took occasion to attach themselves while the cows were reposing in the fields. Many snakes have been thus caught and killed.

The Press—What is It?—The realm of the Press is enchanted ground. Sometimes the Editor has the happiness of knowing that he has defended the right, exposed the wrong, protected the weak; that he has given utterance to a sentiment that is not lost—a sentiment that has cheered somebody's solitary hour, made somebody happier, kindled a smile upon a sad face, or hope in a heavy heart. He may meet with that sentiment months, years after; it may have lost all traces of its paternity, but he feels an affection for it. He welcomes it as a long absent child. He reads it for the first time, and wonders if, indeed, he wrote it, for he has changed since then. Perhaps he could not give utterance to the sentiment now; perhaps he would not if he could. It seems like the voice of his former self calling to the present, and there is something mournful in its tone. He begins to think, to remember—remember when he wrote it, and why; who were his readers then, and whither they have gone; what he was then, and how much he has changed. So he muses, till he finds himself wondering if that thought of his will continue to float on after he is dead, and whether he is really looking upon something that will survive him. And then comes the sweet consciousness that there is nothing in the sentiment he could wish had been unwritten; that it is the better part of him; a shred from the garment of the immortality he shall leave behind him, when he joins the "innumerable caravan," and takes his place in the silent halls of death.—*Chicago Journal.*

How Birds Cling to a Limb.—How ingenious are the springs which move the feet of birds? It is not by a play of the muscles which their immediate will determines, that they hold themselves firm on a branch; their feet are so constructed that, when they are pressed in the centre or at the heel, the toes naturally grasp the object which presses against them. From this mechanism it follows that the claws of a bird adhere more or less rapid; for, in the waving of the branch, either the branch presses against the foot or the foot against the branch, and in either case there results a more forcible contraction of the claws. When in the winter season, at the approach of night, we see ravens perched on the leafless summit of the oak, we imagine that it is only by continual watchfulness and attention, and with incredible fatigue, they can maintain the position amid the howling tempest and the obscurity of the night. The truth is, however, that unconscious of danger, and defying the storm, they sleep amid the war or winds. Boreas himself fixes them to the branch from which we every moment expect to see them hurled; and, like the veteran mariner whose hammock is slung to the masts of a vessel, the more they are rocked by the hurricane the more profound are their slumbers.

The Human Eye.—The language of the eye is very hard to counterfeit. You can read in the eye of your companion, while you talk, whether your argument hits him, though his tongue will not confess it. There is a look by which a man shows that he is a going to say a good thing, and a look when he has said it. Vain and forgotten are all the fine offices of hospitality, if there be no holiday in the eye. How many furtive invitations are avowed by the eye though dissembled by the lips. A man comes away from a company; he has heard no important remark, but if in sympathy with society, he is cognizant of such a stream of life as has been flowing to him through the eye. There are eyes which give no more admission into them than blue berries; others are liquid and deep wells that men might fall into; and others are oppressive and devouring, and take too much notice. There are asking eyes, and asserting eyes, and prowling eyes, and eyes full of faith—some of good and some of sinister omen.

Thunder During Disease.—William Vincent, Esq., of Waterford, called at our office this morning to inform us of a most remarkable occurrence on Thursday, the 28th ult., in Green township. Captain Amos Walker, an aged citizen of that township, who has been very deaf for many years, had his hearing suddenly restored during a thunder storm on that afternoon. Captain W. states that immediately after a loud report of thunder his head seemed to "feel all hollow," and that he told those about him that he could distinctly hear all they said. He is now able to converse without the slightest difficulty, hearing as well as persons fifty years old (he is a great deal older) generally do, and presenting in his case a curious fact for the investigation of the learned and scientific.—*Erie Gazette.*

George Peabody, the American banker in London, will retire finally, from active business in October next, when his existing partnership terminates. He intends to return to this country, and remain permanently.

Judge Rondurant has decided that all court fines are payable in greenbacks.

Our Summary of Mining News.

OLEANED FROM VARIOUS EXCHANGES.

WASHOE.

The Dardanelle, which has been engaged for some two or three weeks in repairing its old drift, is about ready to commence running ahead again.

The Kentucky struck a stratum of quartz in its tunnel a few days since, which is evidently a feeder to a ledge. It is about a foot in thickness, and is composed of excellent looking mineral. The tunnel is now about 665 feet in length, and will not have to be run more than a hundred feet or so to strike the ledge, 300 feet below the surface of the ground.

The Central American is down to the depth of about 100 feet with its shaft, and has run a drift west about fourteen feet. No ledge has yet been struck, but the drift will not run far without coming into one. It does not crop out, but it comes to the surface, and its situation and course is well known.

The Baltic is running a drift from its shaft westward to the ledge. It will probably have to be run two or three hundred feet in all to strike the ledge, but a considerable portion of the distance has already been run. The company have no doubt but that when the ledge is struck by the drift, it will be at a sufficient depth to find good pay rock. The company has for some time past been busy running a drift to the north, to connect with the North American mining works, for the better ventilation and development of both mines. That work is now accomplished.

The Globe Company keeps steadily along with their work.

The New Oregon Company has probably started up its new machinery ere this.

The Knickerbocker intends to suspend operations in the lower shaft, in the course of a week or so and commence work in its upper shaft again. If the ledge pitches into the hill, which it in all probability does, this upper shaft is the proper one to work the ledge through for it approaches nearer to the ledge the deeper it goes.

The Belcher just as they reached the water level in their old works, struck a vein of very rich ore, which was sacked, amounting in all to six tons. This small lot was worked at the Eureka Mill, and yielded the enormous sum of seven hundred and seventy dollars per ton. The Belcher company are sinking their south shaft, so as to drift at a lower level, where they will intersect the same strata.

The Jewett & Sheppard is still busy sinking its shaft deeper. There is considerable water, but no more than is easily taken out by the use of the machinery. If the company keeps on sinking a few days longer, which it intends to do, it will have the deepest shaft on American Flat.

Sutro Mine.—This claim is located on the north side of Cedar Hill, about in a line with the Sacramento claim. The company claim 2,400 feet on the lead upon which they have located, and have been at work for its development nearly all the time since 1860, the time when the location was made. They started in near the ravine which bounds the hill on the north with a tunnel, and following a feeder ran into the hill southward about nine hundred feet, when the feeder led them to a vein some twenty feet in width, containing very fine looking rock. This rock assays from $25 to $100 per ton, but taking the average between the walls is not rich enough to pay the crushing. In order to find the ore in a more concentrated state, the company started a shaft at this point four feet by eight in the clear, which is now down forty feet. Owing to the rapid influx of water, this shaft has been abandoned for the present. There are drifts reaching back some one hundred feet further than the shaft, which were driven for the purpose of further defining the vein; they show no more, however than was shown at the point where the shaft was started. Until lately the Company have had fifteen men at work upon the claim, but a few days since, under the pressure of the dull times, all but four were discharged. What they need at present is money, to put up some sort of apparatus for draining their shaft, in order that they may follow the lead to a greater depth below the water level. The feeder which they followed in from the ravine was exceedingly rich in places, though there was never a sufficient width of ore to prove profitable. In some places the feeder was four or five feet in width, when, again it would pinch out to a mere streak of clay an inch in width, yet it never fairly disappeared and finally led into what appears to be a main vein. Men who have worked upon the Ophir, Gould & Curry and other famous veins in the Territory, having examined the ore of the main vein of the Sutro, speak of it in terms of praise very encouraging to the owners. It is certainly in a good range and the croppings on the hill are very encouraging.—*Enterprise.*

The "Dana," on Reservoir Hill, have an incline 160 feet deep, with a 16-inch lode looking as rich as almost any vein in the vicinity.

REESE RIVER.

The *Reveille* speaks very encouragingly of the mining prospects of Reese River. Late experiments having freely proved the importance of roasting the ores of that region, nearly all the mills will have roasting furnaces as soon as they can have them built. In addition to the furnaces which we have already mentioned from time to time as in process of erection, we have noticed since our last issue, that the Clifton have determined upon putting up furnaces. The ground for the same has already been prepared. The proprietors of the Eureka mill, at Big Creek, have let a contract to Mr. McGinnis, of Austin, to put up furnaces for their mill. Mr. McG. has already completed similar contracts at the California, Hildreth, and Oregon mills and given the fullest satisfaction.

We condense the following items from the *Reveille*:—

Hildreth's mill, which has been stopped a short time for repairs is now running again.

A new quartz mill is now on the way to Egan Cañon, and will be used for crushing the rock of the Gilligan lead, which is proving to be extremely rich.

Mr. A. Maynard is building a new two-stamp quartz mill which will be run by hand power, and will crush upward of three hundred pounds a day. It will be ready to work next Monday, and Mr. Maynard expects to build a larger one in a short time, and have it run by horse power.

Near the mouth of the Union tunnel is a small two-stamp mill operated by wind. The stamps are made of an iron axletree, bisected in the center, and are capable, in a windy day, of crushing two hundred pounds. They are operated with a very slight wind.

An enterprising German has started a two-stamp quartz mill in Cedar ravine, which is propelled by an industrious Shoshone, and is doing splendid work. It promises to yield largely.

A gentleman has been visiting Austin, who is interested in a quartz mill in Colorado Territory, which he intends at an early day taking to Austin.

In Marshall Cañon, South of Austin, there are now quite a number of claims which are attracting considerable attention, among which are the Cox and Rose, Whitlatch Union, Union, No. 2, Eclipse, Marshall, etc.

Little Minnie.—Two tons of ore from this claim, lately crushed at the Pioneer mill, yielded $420, over all expenses of hauling and milling. It is said that a plenty of equally rich ore can be obtained.

"The Mother of Ledges," in Santa Fe district, is said to yield very rich rock, rich in both gold and silver. Several other late and rich discoveries are reported in this district.

The "Lander Ledge," is one of the oldest locations on Lander Hill, on which considerable work has been done, and from which much rich rock has been taken. They have an incline down 80 feet. The Lander is supposed to be on the same range with the North Star.

The "Mills, Post and White" is now a consolidated company, from which considerable good rock has been taken, but as yet from no great depth. A tunnel is now in progress to strike the ledge at the depth of 80 feet.

Two tons of ore from the "Esther," lately yielded at the Pioneer mill, 2,400 ounces of silver 900 fine; $152 were taken out from 100 pounds of assorted rock from the above two tons.

The "Seymour" company after sinking 100 feet, lost their vein. They are now running a horizontal drift at a still lower depth, hoping soon to strike the ledge again.

The "Oregon" mill recently took out 260 lbs. of amalgam from one charge of their steam tub, the result of four hours run, which indicates over $2,000 per ton. This is considered "the big clean up of the season." This mill has recently been crushing rock taken from the North Star claim that is yielding $800 per ton.

The "Perseverance," commonly known as the "Warner & Wells," though a small lode, has produced some of the richest ore ever obtained. From it was taken the ore that was worth over $22,000 per ton. An incline is now down eighty feet finding the lode continuous and regular, with much good rock. It is natural to expect that a lode furnishing so exceedingly rich an ore near the surface, should prove a more than common mine at a greater depth. Under such favorable expectations the owners are vigorously sinking the incline for its thorough development.

The "Whitlach" company shipped over $6,000 in bullion on the 26th and 27th ult. Some of their rock overun $400 to the ton. The company are now going ahead with the intention of having all the rock crushed which they can possibly get worked.

The "Morgan & Muncey" owners are making some important developments upon their ground.

The "South American" is now raising some very fine ore, having lately passed through a somewhat broken ledge. The lode is quite large, and would, it is thought, pay well, could a mill with roasting furnaces be obtained for working it. Twenty or thirty tons of good ore are now in store ready for the mill.

The "Ozark Company" are progressing rapidly with their incline, under favorable auspices. The lode is rapidly improving as it is further opened.

The "Fenian Lode" is located on Austin Hill. An incline of 50 feet has developed a 20-inch vein, the rock from which, it is said has paid from $30 to $150 to the ton. Small lots worked by hand process have gone up into thousands to the ton. The owners of this mill have become dissatisfied with returns from the mills, and are now putting up a small one, of two stamps to be operated by man power.

The "Banner Lode" has an incline 80 feet deep, showing a lode upwards of two feet wide, with considerable ore and all indications favorable.

ESMERALDA.

The Del Monte, according to the Esmeralda *Union*, which not long since had dwindled down to an inch in width in the lower shaft, is now four feet wide and is beginning to look as if it meant to become still wider and as rich if not richer than above.

The *Union* very correctly adds that whenever a company have a well defined lead there is little fear of it "petering out" only in the imagination of those who never studied the science of mining. It is the confident belief of every good and practical miner in this district that the Del Monte cannot fail to reach a large deposit of the precious metals at no great distance from the bottom of their lower shaft, and the fact of the lead at that point becoming larger and better, ought to convince any of the skeptics that are or have been idling about our streets to the detriment of the interests of the district, that their discouraging theories are unfounded.

[This strike has been at or near the water level, and the work in this direction has been carried on at the suggestion of Mr. Attwood, made at the time of his late visit to that mine, who then assured the company that they would in all probability find good pay rock at this particular point. Eds. Press.]

Wide West.—Of this company's mine the *Union* says:—It was said by many that the Wide West company when their lead narrowed to an inch in width, would never strike pay rock again, and the lead would finally become entirely extinct; but miners of experience never for a moment entained an idea so clearly absurd. Work in the shaft was vigorously pushed forward and the result is highly gratifying. Had the Wide West company, while working out the rich chamber, the rock from which yielded such an abundance of gold and silver, continued to sink upon the lead and prospect their claim in a scientific manner, the result to-day would be far different, and in all probability ere this they would have reached the second chamber. But instead, unfortunately, they pushed forward a tunnel that to the practical and experienced miner promised little or no fruit, thus squandering a sufficient amount of money to have developed the permanency of the mine. Under the direction of the present superintendent, however, a more judicious expenditure of the company's money is being made, and a satisfactory result may be expected.

The Crockett.—The energetic superintendent of this claim, Mr. John Daggett, has shipped, the present week, for the company $2,341 the result of the first month's work under his charge. This result is highly satisfactory, considering the heavy expense of putting the claim in working order, improvements, etc.

OWENS RIVER.

A correspondent of the Visalia *Delta*, writing under date of July 27th, says that a Boston company has bought out the New York company's mines in Russ District. The same company is also bargaining for the New York ledge, in the same district. A very rich ledge was struck a few days since in the foot-hills of the Sierra, near "Lone Pine." The first assay showed over $600 in silver, per ton. Gold could be seen sticking out on the rock in coarse chunks. Broder struck it in the Palmetto a few days ago, up on the White Mountains. This ledge is large and well defined; the gold is coarse, and in most of the rock, it can be seen with the naked eye.

The mill at San Carlos will commence running on Monday or Tuesday, they are now putting on the finishing touches of paint. The new saw mill, at Bishop's Creek, will be ready to run next week. The saw mill at Big Pine is turning out a fine quality of lumber, and finds a very good market.

CALIFORNIA.

Sierra.—A nugget of gold and quartz weighing twenty-five pounds, the gold in which amounted to $4,077,38 was recently taken out of the Packer claim, Smith's Flat, says the Mountain *Messenger*.

The "New Strike" recently made on a tributary of the South Fork of the Yuba, near Howard's Ranch, is reported as being more extensive than at first supposed.

Nevada.—The Grass Valley *National* says that the mines on Moore's Flat, are among the most remunerative in Nevada county. At Snow Point, about two miles above Moore's Flat, mining is going on energetically. Three companies—Cower & Blackwell, Price & Fuller, and Cummings—are now working with excellent prospects. Several other companies will have their claims opened before another year, and Snow Point promises soon to tell a cheering golden tale.

Calaveras.—The Calaveras *Chronicle*, says that quite a mining town is being built up at Blue Mountain, although but little work is being done upon the mines. This is in consequence of the general stagnation in business and the scarcity of money growing therefrom. The *Chronicle* adds that "aside from its mineral resources Blue Mountain has advantages which will recommend it to those who wish to settle down in the vicinity to steady employment. Its climate cannot be excelled anywhere, while wood and water are there in abundance. Silver can be extracted from the ores at Blue Mountain at one half the expense attending the operation in the adjoining Territory. We do not expect that much will be done there this year, but another season we do believe its wealth will attract thousands who have this Summer been deluded to migrate to far distant and unhealthy localities."

New Quartz Mill.—The '76 Company (Messrs. Nave, Byers & Co.,) says the Quincy *Union*, is building a large quartz mill on Jamison Creek, to crush the rock of the '76 quartz ledge.

Brown's Valley.—The Marysville *Appeal*, was shown, on Monday last, $160 in coarse gold and retorted amalgam, the result of five tons of rock crushed in the Donneboge mill last week, from the Rare Ripe Ledge, near Brown's Valley. Little over one half of this amount is coarse gold, which was taken from the battery. The company have one hundred tons of such rock on the surface, ready for hauling to the mill. It was from a depth of about one hundred feet.

Markleeville, Alpine County.—The Alpine *Chronicle* says the citizens of Summit City have organized a company for the purpose of erecting a quartz mill at Markleeville. About $3,000 has already been subscribed, and a committee appointed to make all necessary arrangements in furtherance of the object. It is the intention of the company to erect an eight stamp mill. If we rightly understand the *Chronicle*, the ladies of Markleeville, will give a ball in aid of the enterprise, on Tuesday evening next. If the ladies take the matter in hand it will surely succeed.

Silver Era.—This company have struck their ledge in their upper tunnel, which is in a distance of 30 feet, and are taking out very good rock, about one ton of which the company intend sending to San Francisco to be tested. Their lower tunnel has been run in about 260 feet, and they are in daily expectation of striking the ledge.

Boulder Hill.—Woods, Marston & Dudley have just finished crushing with their arastra about twelve tons of Boulder Hill rock, from which they have obtained nine pounds of amalgam, worth about $800. They have run their arastra with a wooden shaft which has annoyed them very much by breaking, and to prevent a recurrence they have sent to San Francisco for an iron one.

Buckeye.—Silver has been roasted from rock taken from this claim. It is thought that this will be one of the best claims in the Mokelumne District.

The Iowa has commenced work with promising croppings and flattering prospects. On the Rosalinda, a shaft, has been sunk 80 feet, at which point rich quartz has been struck. The Black Hawk are working with two shafts and meeting with very favorable prospects.

Have Struck It.—The Dayton, N. T., *Sentinel* is informed that the labors of the Newcastle Coal Company, have at last been crowned with success. At a depth of some eighty or ninety feet, they struck an extensive vein of most excellent coal. This claim is situated in El Dorado Cañon, seven or eight miles east of Dayton.

Legal Tender Notes.

San Francisco, Friday, Aug. 5.....40 per cent.

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the Journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also — EDS. PRESS.]

SALT AS A PRESERVATIVE FOR TIMBER.—J. B. Simmons, of Brush Valley, Indiana, thus writes to the *Scientific American*:—"I have used common salt for the preservation of mill-shafts, and it has had a good effect in staying the decayed timber. Take a two inch auger, bore holes into the stick of timber, and fill up with salt, and then plug up the holes tight. In a large stick of timber, like a water-wheel shaft, bore a hole through the centre, like a pump, and fill up with salt, and plug up; and there is no telling how long this may last, as it has been tried with us, and has answered very well."

THOUGHTS.—Unspoken thoughts are virgins. They must be wedded to words ere they can attain perfect existence; and once united, they live and bear fruit forever. No decree can divorce them.

Mechanical and Patent Department.

Important Improvement In Photographing.

Mr. Jacob Shew, of this city, has discovered a new and most important improvement in the photographic art, the advantages of which consist in the production of a softness, clearness and delicacy of tone in the pictures, unattainable by any process hitherto employed. It is applicable to any size of photograph, and can be employed with equal success in printing old negatives—as with those recently taken.

The discovery consists simply in the employment of ground glass, instead of plain glass, as the medium through which the light is made to pass in producing the transfer from the negative. It is well known that the advantage of the chromatic process of photographic printing is much greater with some kinds of negatives than with others. The prints from all faint negatives lacking intensity, will be much improved by this process and any photographer knowing the difficulty of at all times obtaining the proper degree of intensity, will at once appreciate the advantage of a printing process which corrects any such lack of perfection in their negatives. Again the spots often seen on photographic prints, caused by specks of dust lighting on the glass of the frame while printing, are avoided by the effects of the diffused light falling through the ground glass used in the new process.

But the greatest advantage of all is in the softness and mellowness of the tone of the prints, giving them something of the finish and appearance of finely retouched pictures without losing any of the detail or expression sometimes lost in retouching. A patent for this improvement has been applied for through the Patent Agency connected with this office.

A New Turbine.—Our attention has been called to a turbine water wheel of quite a new and ingenious construction, invented by Mr. James Leffel, of Springfield, Ohio, and patented in 1862. This wheel is known as the "Leffel's American Double Turbine Water Wheel." *Turbine* is a general name given to water wheels which revolve on a perpendicular shaft. These wheels are quite various in character and mode of construction, and are built double and single, that is with a single and double discharge. The general range of the power of these wheels varies from 50 to 75 per cent. of the actual weight of the water used. The Leffel wheel, it is claimed, is constructed on purely scientific principles, and when properly put together is capable of taking off the largest possible amount of power which any given weight of water can impart.

One of the wheels may be seen at the International Hotel, in this city, the first which has ever been brought to this coast, where its principles and capabilities will be explained by Mr. Myers, the agent of the inventor. These wheels have been subjected to numerous trials with other wheels of various construction in the Atlantic States, and, it is claimed, with universal success. We have seen numerous testimonials as to their efficiency, and the wheel certainly appears to possess merit in an extraordinary degree, in various ways. It will be on exhibition at the Industrial Fair.

Rapid Vibration—The reed in a melodeon which gives the tone C, as it is called, vibrates 112 times in a second, and travels 430 feet in a minute. The manufacture of this little instrument is one of the most delicate operations in mechanics. A slight blow upon it would so alter the particles or texture of the metal of which the reed is made, as to impair the delicacy of the sound which it gives, and the slightest scratch will produce a similiar effect. Hence too great care can scarcely be employed in handling these delicate portions of the instrument.

A Chinese Invention.—The idea of building ships in water tight compartments was borrowed from the Chinese, who have long practiced that method of constructing their watercraft.

Improved Bomb Shell.—Mr. William Berney, an ingenious mechanic of this city, has invented an improvement relating to the explosion of bomb-shells, which it is thought may be of important advantage in using these weapons against an enemy. The invention consists in an ingenious device for bursting the shell, either at the instant of impact, or at any desired instant afterwards. The experiments are not yet fully perfected, but enough has been done to render its success almost a certainty. Mr. B, is a brother of the gentlemen who invented the Greek Fire, which produced such a sensation in Charleston, when it was lately introduced into that city by Gen. Gilmore. He was led to experiment in this direction from learning the failure of so many shells to burst during the bombardment of that city. We believe that no device has yet been employed which will burst a shell from impact except in the use of elongated ones, which sometimes are not desirable to employ. By the use of this invention round shells as well as elongated may be discharged with equal facility and certainty of precision. We shall have more to say upon this matter when the working of the principle shall have been more fully verified by future experiments.

California Patents.—Among the improvements for which patents were issued from the U. S. Patent Office for the week ending June 21st., we notice that Mr. Zenas Wheeler of this city has received a patent for his improved dry quartz crushing machine. By this invention the quartz after being reduced to an impalpable powder is taken from the battery and carried to a deposit chamber, by means of a current of air which is made to act as a suction draft from the former to the latter. This current is kept up by means of a common blower. The invention also covers an improved method of securing the dies in the bed of the mortar, also an improvement in the construction of the frame of the mortar, whereby it is rendered more desirable and better able to withstand the jar and concussion of the stamps. We have already in a previous number given a lengthy description of this invention.

Boiler Scraper—A New Invention.—H. D. Cooper, of New York city, has invented an apparatus which he calls "Cooper's Boiler Scraper." It consists simply of a shaft set lengthwise across the inside, and near the lower portion of the boiler. Attached to this shaft are a number of arms or scrapers. One end of the shaft is continued through the boiler head, by a steam tight box, and to it a crank is attached by which it may be turned. The scrapers are so set that when the shaft is turned they remove from the bottom of the boiler, or disturb any sediment that may have settled there. By turning this shaft two or three times round, once in three or four hours, any sediment that may have settled in the bottom of the boiler is disturbed or loosened and again mixed with the water. By this disturbance the formation of scale is in a measure prevented or at least retarded. Stirring up the water in this manner also facilitates the more perfect discharge of sediment in "blowing out." It is claimed that this arrangement is a very useful one. It was patented in May last.

Trifling but Useful.—Among the new patents recently issued at Washington, is a little machine designed for performing what would at first be thought a trifling work—cutting off the ends of lead pencils. The final operation in the manufacture of this useful instrument, is the cutting off, smoothly, the ends. This operation, simple as it appears, is nevertheless a very difficult one to accomplish, because it must be done after the pencils are varnished, and in such a manner as not to mar the varnish, or splinter the wood or lead. It has heretofore been accomplished altogether by hand. By the use of this machine the work is done automatically, requiring no other hand labor than feeding, which can be performed by a child. This is another instance of the value of trifling inventions, as elsewhere alluded to.

Great and Small Inventions.—The apparent insignificance of an invention is no measure of its value. Inventions in the meanest of household arts, such as improvements in washing and wringing machines, have not only contributed most materially to domestic comfort, but have given rise to single manufacturing establishments employing over half a million of dollars of capital. Improvements in articles so trivial as hooks and eyes, and pins for infants clothings, have been the foundation of patents which have produced tens of thousands of dollars.

The application of a pencil mark in submarine blasting, and the explosion of military mines by the electric current, enables the operator to dispense with cumbersome and costly batteries and machinery formerly indespensable. A spring for holding to the reflector and chimney upon a coal oil lamp, consisting simply of a bent strip of brass, has gone into universal use, and a tariff of merely a few mills upon each lamp to which the invention is applied has yielded several hundred thousand dollars to the inventor. The more minutely the arts are studied, the more will the conviction be forced upon the mind that, as the distinction between great and small appears to be unrecognized by Providence, the distinction between important and trivial, and useful and worthless should never be applied to any original work of human ingenuity.

This is the doctrine of Sir David Brewster, who believed that "patents should be granted for every new idea, whatever that idea might be; that every encouragement should be given to persons to bring forward such ideas; and that instead of throwing difficulties in their way, even when the ideas appear to be frivolous, every facility should be given for their development, because they contain the germ of future inventions. They may contain ideas which will suggest others more useful and practical; and what is a simple and amusing experiment in one age may become a great invention in another."

Lamb's Fire Damper Regulator.—Mr. Philip Lamb, of this city, has secured letters patent for his improved fire damper regulator. This regulator consists substantially of a cylinder, a piston and a spring, the cylinder receiving steam at one end from the boiler to act upon the piston which is arranged within it, the piston being connected by a crank with the damper and the spring being applied within the cylinder to act upon the piston in opposition to the pressure of the steam which tends to move it in a direction to close the damper.

Mining Machinery for Colorado.—Mr. Bovee, forwarding merchant at Atchinson, Missouri, has had one million pounds weight of mining machinery consigned to him for Colorado, to be freighted thither by the 1st of September. The transportation of this amount of freight will require one thousand wagons, and twelve thousand oxen. Other forwarding houses in Atchison, Leavenworth, Nebraska City, St. Joe, and Omaha, are having their full share of consignments for Colorado. A vast business is rapidly springing up between the Western States and Colorado, Salt Lake, and points even still farther west.

Shingles Rendered Fire-Proof.—Mr. John Mears says, in the Boston *Cultivator*, that he has prepared shingles in the following manner, and after an experience of eleven years, and using seven forges in his blacksmiths' shop, he has never seen a shingle on fire, nor has a nail started. The shingles are prepared in the following manner:—"Having a large trough, I put into it a bushel of quick lime, half a bushel of refuse salt and five or six pounds of potash, adding water to slack the lime and dissolve the vegetable alkali and the salt—well knowing that pieces of an old lime pit, a soap barrel, or a pork tub, were not the best kindling stuff, and having long since learned, while at the Vineyard Sound, that hot salt water whitewash would endure far longer than that made with fresh-water, absorbing moisture, striking into the wood and not peeling and washing off. I set the bundles of the shingles nearly to the bands, in the wash for two hours; then turned them end for end. When laid on the roof and walls, they were brushed over twice with the liquid, and were brushed over at intervals of two or three years after."

Barbaires' Feathering Paddle Wheel.—Felix Barbaires, of Solano county, in this State, has obtained a patent for an ingenious device for feathering the paddles of steamboat wheels, by which he hopes to save much power which is now lost in the back or lift water.

The Open Stock Board has given way to the pressure of the times and gone in.

An Ancient Bucket-Engine.—M. Deligny, now engaged in working the copper mines of San Domingos, in the province of Alemtejo, Portugal, has just sent a bucket-wheel, dating from the Roman period, to the Conservatoire des Arts et Metiors, and a paper on the subject to the Academy of Sciences. The above-mentioned mines, where this wheel was found, were worked in the earliest ages by the first nations that peopled the Iberian Peninsula. The chief mines in Portugal were Setubal and Troya; in Spain, the mountains of Tharsis and Zalamea, or Solomon, whither Solomon and Hiram sent their fleets to procure the copper required for the decoration of the Temple. The great importance of these mines is shown by the masses of scoriæ still visible around, and which are estimated at 20,000,000 of tons, accumulated in the course of several ages; the copper extracted thence is calculated at 800,000 tons. These scoriæ also reveal two different systems of treatment of the ore, pertaining one to the Phœnecian, the other to the Roman period, there having been an interruption between the two, caused by the wars between Carthage and Rome, and the conquest of the country by the latter. It would appear that the Romans resumed the working of these mines under Cæsar, coins bearing his effigy and that of Augustus having been found in them; the working was not discontinued until the invasion of the barbarians under Honorius. An inscription preserved in the Mining School at Madrid shows that under Nerva the working of the mines of Thartesis Batica was regularly organized. The Romans worked them very systematically, the waters were drained off through galleries, which in many cases attained a considerable length, as much sometimes as 1400 metres. When these shafts were very deep, an additional shaft for ventilation was sunk close to the main ones; they sometimes were 80 metres in depth. But as the hardness of the rock sometimes prevented the miners from continuing their galleries below the level of the waters, these would accumulate in certain places, and then a bucket-engine was used to pump them out. The one sent to the Conservatoire, and discovered at San Domingos, is 6.66 metres in diameter. The spokes are of fir, the axle and its supports of oak. The buckets, 25 in number, are 16 centimetres in width, by 50 in length and 13 in hight. All the pieces of the wheel are joined without any metallic fittings. The wheel was set in motion by men in the manner a treadmill is worked. The quantity of water thrown out per second was 1.84 hectolitres. This wheel dates from the year 412 of our era, and has, therefore, existed 1452 years. It is certainly the oldest relic of its kind.

Flow of Water Through Pipes.—Mr. Root, of New York, recently read a paper before the Polytechnic Association of the American Institute in which he described an experiment he had tried for the purpose of ascertaining the effect produced on the flow of water through pipes by dividing the pipes with perforated diaphragms. In a three-inch tin pipe he inserted ten diaphragms, at equal distances, with a hole three-fourths of an inch in diameter through the center of each diaphragm. The pipe was perforated on the upper side by a minute hole in each space between the diaphragms, and water was admitted under a head. The jet from the minute opening nearest the end of the pipe where the water was admitted rose to the hight of ten inches, the next jet to the hight of nine inches, the next to the hight of eight inches, the next to seven, the next to six, and so on to the last, where the water rose one inch, and it flowed out of the three-quarter opening at the end of the pipe without any projectile force, falling perpendicularly.

Mr. Dixon explained that the obstruction in the flow of the water was caused by eddies formed between the diaphragms. He described an experiment tried in Jersey City, of making enlargements in a pipe, and it was found that four or five enlargements diminished the flow of the water sixty per cent.

Method of Making Cast Steel.—Mr. Galy Gazalat has communicated to the Academy of Sciences at Paris, that by passing through fused cast iron at 1400° centigrade, numerous capillary jets of superheated steam, he is enabled rapidly and fully to remove the carbon which is taken up by the hydrogen of the decomposed water, and also to burn out, by the oxygen liberated from the water, the silicon, while the sulphur, the arsenic, and even the phosphorus are removed in combination with the hydrogen. Should this prove to be so, we may have an auxiliary to Bessemer's method, at least, and possibly even a substitute for it. We await, however, fuller details and confirmations.

Scientific Conjectures.—Life on the Moon.

Science has never been able to discover any atmosphere surrounding the moon. We know that we cannot imagine life without air. There could be no sound, no heat, no sky, no cloud. We can hardly find anything we call living but owes its life to air; therefore the conjecture has been arrived at, that the moon was uninhabited. But Mr. Hansen, a distinguished astronomer, has found a discrepancy in the idea, and conceives that there may be life there, at least on one side.

Several cases of irregularity in the time of the moon's course he ascribes to the effect of uneven gravitation. He states that the center of figure and the center of gravity are not coincident, one being distant from the other eight miles. Thus her sphere is heavier on one side than the other, like an egg. "Balls have been cast hollow, but with one side thicker than the other; the density being given, calculation describes the curve to a nicety, and *vice versa*." The conclusion of Mr. Hansen is that the hemisphere turned towards us is the lighter half. As air and water would naturally gravitate to the heaviest side, he concludes it is probable that life may exist on the hidden side, and that a world corresponding to our own, may have its "men in the moon."

This is the most tantalizing suggestion that science has given us. To think that our neighbors must perforce keep themselves on the hidden side, and are forbid forever all the investigations of science, seems a little too bad. We have always been calculating on the time when new discoveries in lenses would bring us a glimpse of some wonder in that bride of the night that walks so calmly through her star-encompassed pathway, throwing her beautiful veil even to the shadows of our earth, moving our seas by her love, and sending through the nervous life of us poor mortals some sense of a presence that is "so near and yet so far."

If there are beings on the moon, similarly constituted to ourselves, there must certainly be many inconveniences attendant upon their residence on that planet. For instance it is well known that a "day in the moon" equals fourteen of our days. It begins with a slow sunshine, followed by a brilliant sunshine and intense heat (about 212° Fahrenheit); the sky is intensely black (there being no atmosphere like ours, to which the blue color of the sky is due); the stars are visible, and the horizon is limited; there is dead silence; the cold in the intensely black shadow is very great; and there is no aerial perspective. Thus the moon is no place for man, or any animals or vegetables that we know of. The nights of the moon (the same length as her days) begin with a slow sun set, which is followed by an intense cold (about 243° below zero).

A late writer in the *N. Y. Tribune* discoursing upon the moon says:—

The discoveries of science are becoming more astonishing every day; and in no department are these more interesting than the recent researches of astronomers in lunar geography.

Until quite recently the surface of the moon was supposed to be a vast lifeless desert. Astronomers have abused the moon in every possible manner. They have said there was no heat in moonshine. They have denied her an atmosphere, and consequently water and organic life. They have made us believe that a residence in the moon would be exceedingly undesirable. But Knox and Mellom have shown us, by very exact observations, that there is heat in the moon's rays.

Zantedeschi has discovered that this heat produces a very sensible effect upon the mimosa. An English philosopher has found that the earth is colder during the first quarter of the moon than it is during the second.

Upon the growth of plants the moon exercises a remarkable influence. The chemical action of light is necessary to their principal work, the absorption of carbon from the carbonic acid gas of the atmosphere. This work all plants carry on during the day, and in the night they sleep—except when the moon shines. She wakes them and sets them at work. So the farmers who plant only just before the full of the moon are right, and the scoffers who call them superstitious are themselves the foolish ones. For, if sown before or near new moon, the young plants get above the ground just at the full, when the tender things need sleep; but if sown just before the full, they come up about new moon, pass their babyhood under the soothing influence of dark nights, and when the full moon comes are sturdy urchins, able to work both night and day.

The moon worshippers are right, also, in regard to the influence of the moon upon the weather. Herschel, Arago and Whewell, recognized that the moon had some slight power in dispersing clouds. The sailors go further, and say the moon eats up the clouds. At the last meeting of the British Association, it was shown that the weather, through a long series of years, depended a little—a very little—upon the phases of the moon; and Quetelet, the Director of the Brussels Observatory, has shown that between the first and the last quarters of the moon, more and not less rain falls than during the remainder of the time. However, fine weather and greater rainfall may go together.

Finally, Webb, after a careful comparison of the present appearance of the moon, with the very precise maps made by Madler some twenty years ago, has shown that there have been some considerable changes. Some of the small craters, in particular, have a notably different appearance from what they had when Madler observed them. These changes show the existence of water and an atmosphere. Father Secchi, Director of the Roman Observatory, after much observation, has come to the conclusion that the peaks of the highest mountains on the moon are covered with snow. And to make us still more at home on the moon, De la Rive, the owner of the observatory at Crawford, London, gives it as his opinion that what were first marked down as seas, and afterwards supposed to be barren plains, are, in fact, extensive forests. In support of this comes up a great astronomical authority—Schwabe, the discoverer of the periodic times of the sun's spots. Besides these great smooth plains, which were called seas, there are a number of furrows or wrinkles—nearly a hundred—the nature of which is entirely unknown. Their length varies from three to thirty-five miles, and their greatest width is about five thousand feet; most of them are considerably narrower. Their sides are parallel and smooth; some are run in straight lines, and some are gently curved. Ordinarily they separate, but sometimes they cross, crater, and occasionally they seem to be cut off by them. They are found all over the surface of the moon, except on the mountain chains

Of these furrows Schwabe has made careful study at various times. He found them to consist of very fine parallel dark lines, separated by clear spaces. A few months later the lines of streaks had disappeared, but after a little time they returned again to disappear. In this periodic change, he thinks that he finds proof that these lines are rows of trees, and that the clear streaks between them are the bare ground seen when the trees are leafless; when the trees are in full leaf the ground is so covered as to produce a uniform shade, and the lines disappear.

Nothing is more natural than to suppose the dark spots on the moon are forests, but how shall we account for the growth of these trees in right lines? This we must yet consider as only an hypothesis. With the aid of photography, which will secure for us pictures of the moon from time to time, we may hope, that the question will be solved, and that we may really find out what is going on upon the surface of our satellite.

Ornamental Uses of Mica.—The application of mica to ornamental purposes is extensively practiced in Paris. When thus employed it is first cut to the desired thickness, then coated with a thin layer of fresh isinglass diluted in water, and the gold or other surface applied, after which it is allowed to dry.

The sheet of mica can be easily rendered adherent to almost any article by glueing. The artisan then takes a pattern of copper, with a design cut on it, and places it on the reverse side of the mica, and with a small brush removes any superfluous parts, the required design thus remaining on the parts which have not been brushed. He then applies the colors one or more times, as may be necessary, and afterwards coats the whole with a solution of liquid glue diluted in spirits of wine, which is applied for the purpose of rendering the mica pliable. When this is effected, the mica with the design upon it is applied to the frame of the other object and fastened with glue. The junction of several pieces of mica is made imperceptible by first glueing them together with Venetian glue, and then applying a hot iron to the parts where the mica is joined together, the parts being thus completely united. From its unalterable nature mica preserves the gilding, silvering, or coloring from deterioration, and from its transparency the articles so treated will preserve all their brilliancy. They are further preserved in a state of perfect cleanliness, as anything that soils them may at once be removed by washing.

The Gold Hill *News* says that the Crœsus Company have sunk a shaft 400 feet with out striking water. Bad country to dig wells in.

A Skillful Colored Mechanic.—A colored man named Benjamin Boardley, once a slave in Maryland, some few years since attracted the attention of several benevolent gentlemen by the wonderful mechanical ingenuity which he displayed. They clubbed together, purchased him of his master and gave him his liberty. He went north where his genius was quickly appreciated, and soon found employment in the Newport Naval Academy, where he displayed such qualities as induced Prof. Smith to place him in sole charge of the philosophical apparatus of the Institution. This man has recently employed his leisure time in constructing a steam engine. The result of his work has been the construction of probably the smallest steam engine ever built. It is rated at 3-fly power, and is perfect in all its parts, including the boiler.

The Mechanical Hair Brush.—A gentlemen who has submitted himself to the operation of the mechanical hair brusher, describes the sensation produced by it as follows:

When I went in to get my hair brushed, had sat down before the glass, and been tucked in as usual, with bib and dressing-gown, the hairdresser took up one of his circular brushes and hitched it to the revolving band over my head. In a moment I felt a silent fanning, as if some monstrous butterfly were hovering over me; this was the air of the twirling brush, which caught my hair up and laid it down, and traveled all over my head with incessant gentle penetration. It crept down my whiskers and searched my beard with the same tender and decided effect. There was no scratching, not even of the neck and ears, but the skin of the cheeks and chin was reached and swept. It was a new sensation. I felt as if I should like to be brushed continuously for a month.

The Public Debt.—The following is a correct statement of the National debt, as appears from the books, Treasurer's returns and requisitions in the Treasurer's Department, on the 28th day of June, 1864:—

Debt, interest payable in coin	$860,471,788
Debt, interest payable in currency	392,328,665
Debt on which interest has ceased	370,170
Debt bearing no interest	486,866,065
Total	$1,740,036,788

The annual interest upon the outstanding debt on June 28, payable in gold, was $52,024,843.54; interest payable in currency, $21,682,315.68, making the total annual interest on the whole debt at that time, $73,707,159.22; the account of fractional currency outstanding was $22,210,493.10, and the unpaid requisitions amounted to $502,620. The amount in the Treasury was $11,766,968.40.

Think.—Thought engenders thought. Place one idea upon paper, another will follow it and still another, until you have written a page. You cannot fathom your mind. There is a well of thought there which has no bottom. The more you draw from it, the more clear and fruitful will it be. If you neglect to think yourself, and use other people's thoughts giving them utterance only, you will never know what you are capable of. At first your ideas may come out in lumps, homely and shapeless; but no matter; time and perseverance will arrange and polish them. Learn to think and you will express your ideas.

Things Founded on Reason.—The ideas of superiority felt by a man in a big steamboat over another in a little steamboat.

The contempt a man who is going the whole route in a stage feels for one who gets in to ride only a few miles.

The dislike a person experiences against a stranger who wears his hat rather to please himself than anybody else.

The pride of a gentleman in the boxes at theater over one in the pit.

The credit you award to a shopkeeper when he assures you, on his "honor," such an article cost him so much.

New Style of Locomotion.—There is actually a Pneumatic Passenger Railway Company in London, who, moved by their success in shooting packages and letter bags throughout the city, are determined to do the same for those precious human parcels which must be handled with so much care. They have been constructing an experimental tube in the grounds at the Crystal Palace a quarter of a mile long, for the conveyance of passengers. And so the reign of steam is to pass.

A History of this war, made up of soldiers' letters, describing the marches, engagements, and incidents, is the latest proposed novelty. Frank Moore is the compiler.

The Wind of Projectiles.

The fact that a cannon ball passing close by a living subject exercises a lateral pressure on the air sufficient to produce a contusion has often been asserted, and as often denied. On this disputed matter, M. E. Peliken of St. Petersburg, some three years since presented a paper to the Academy of Sciences of Paris, giving an account of certain experiments instituted with a view to set the question at rest. Having obtained the concurrence of the Russian Government, M. Peliken caused a cylinder of sheet iron, one foot in diameter, to be constructed, with a piston moving easily inside. The piston rod was provided at its outer extremity, with a black lead pencil to mark the recoil on a slip of paper. The whole apparatus was firmly fixed on a strong wooden frame. The piston and piston rod weighed 8 lbs, and a force of 1½ lb was requisite to make the piston recoil an inch. At four meters distance from the frame a wooden screen was erected in order to ascertain the distance of the projectile from the piston at the moment of its passage. Although the experiments instituted in 1843 and 1844, in the arsenal at Washington, by Major Modacay, proved that at the distance of 48 feet the gases emanating from the powder have no effect upon the ballistic pendulum, a second screen was placed before the other at five meters distance from the apparatus, in order to protect it, if necessary, from the action of these gases. A 40 lb howitzer was then placed at a distance of 14 meters from the first screen; the charge of the powder being 4 lb. The velocity of the projectile at that distance was equal to that of a bombshell projected with a 7 lb charge, viz: 956 feet per second. The results obtained showed: 1. That at a distance of three inches, the piston remained immovable; 2. That even when the projectile broke off a part of the wooden frame supporting the cylinder, the piston gave no indication of motion; 3. But that, if the projectile just grazed the surface of the piston, a recoil of two inches was obtained; 4. If, on the other hand, a fragment of the frame hit the cylinder, the piston, instead of moving backward, would move forward about 3½ lines; 5. If the cylinder, instead of being placed parallel to the screens, was placed obliquely, a recoil would take place of from ¼ to ½ of an inch. Hence M. Peliken concludes that, since the piston required a force of 1½ lb in order to be moved an inch, and the wind of a cannon ball can never be expected to exercise such a force, the passage of a projectile close to a living subject will only produce an insignificant effect, which cannot amount to a contusion.

The Future Naval Warfare.—We shall know very shortly whether the chains hung outside of the Kearsage saved her men. To all appearance they did not; and but for the melancholy fact that some of the Alabama's wounded must have gone down with her, the loss would probably have been nearly the same on both sides. Is there not something ominous in such an encounter within our own seas? Such a contest, so brief, so hard-fought and so decisive, is even more terrible than the hand to hand tussle and the mere game of fisticuffs that our old fleets used to indulge in with a thousand pop-guns on either side. True there was damage done at last, but sometimes very little damage to speak of, and a big ship might receive many hundred shots only to have the glory of showing the shot-holes to the populace of Portsmouth. It is not so now. At the distance of a mile, never less than a quarter of a mile, a formidable ship, the terror of the American commerce, well armed, well handled, is sent to the bottom in an hour. Exactly an hour elapsed from the first shot to the moment when it became obvious that the vessel was sinking—when, indeed the rudder was broken, and the fires were put out. That is the pace at which our naval engagements will be fought for the future. In this instance the pace was all the quicker because the guns had the start of the ships, the guns being the new artillery, the ships wooden, excepting the chains of the Kearsarge, if they constitute an exception. The next duel in the British Channel will probably be between two vessels of the Warrior class; and he must be a bold man who can be sure that it will last as long as a Sunday morning service, or be less decisive than the last Sunday's.—*London Times, June 22.*

Should'nt be Disturbed.—The Pittsburg *Dispatch* learns from a reliable source that a congregation in Youngstown, Pa., were lately edified by a discourse against the sinking of oil wells, on the ground that God intended these oil deposits for some great conflagration, or other purpose, which was being interfered with by the well-borers.

The Amount of subscriptions for the distressed cotton operators in England has reached the amount of $10,000,000 in money, besides about $5,000,000 in clothing, etc. Books containing the subscribers' names are kept in large volumes in London.

Mining and Scientific Press.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

Office in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:
Saturday Morning, August 6, 1864.

MINING SHARE MARKET.

Business in the Mining Share Market. during the past week has been exceedingly ligbt. No sessiou was held on Thursday, in consequence of that day having been set apart as a national Fast Day. A little activity has been manifested in several speculative shares, hut no especial indication of returning confidence can yet be seen. The constantly increasing receipts of hullion, and the generally improving condition of the mines, everywhere, must soon, however, hring matters to a turning point and produce a reaction, which will gradually restore the market once more to a healthy condition.

Gould & Curry dropped to $860 in the Pacific Board, on Saturday last. In the San Francisco Board it fluctuated during the week from $1,040 to $ 1,135, closing at the former figure. No change is reported at the mine during the week. Explorations are still going on, and will he continued without intermission. The receipts of hullion from the mine for July were about $325,000. A dividend of $50 per foot has been declared for the month of July.

Ophir has improved form $430, tho closing figure in our last report, to $600 on Monday, closing at $555, on Wednesday. One hundred and thirty-two shares only have changed hands during the week. The mine yielded about $75,000 during the past month, leaving a small balance in the treasury over expenses.

Savage found a seller on Saturday last at $750, since which no transactions have been reported; $900 was offered for it yesterday without finding a seller.

Chollar has partially recovered from its decline of last week, and found buyers on Wednesday at $335. It was offered yesterday, however, at $320, without takers.

Potosi remains at about its closing figures of last week. Reports from the mine are favorable. The receipts of hullion for the month were about $150,000.

North Potosi has been comparatively quiet. We notice but a single transaction (yesterday) of 20 shares at $45, an improvement of $10 over the closing figures of last week.

Imperial still remains firm at about previous figures; but little of this stock is being offered.

Lady Bryan still maintains its usual activity. After reaching 8⅜ on Monday, on the strength of favorable reports from the mine, it gradually declined to $4, its closing figure at yesterday's board.

Burning Moscow suddenly advanced from $13½, on Monday, to $20 and 22½ yesterday, at which figures considerable business was done.

Yellow Jacket is quiet, hut held firmly at $425, the lowest figure of last week.

Melones, which made its appearance last week at $8@$10, after a period of quiet, advanced to $12 on Monday, reached $17 on Tuesday, and $30 on Wednesday, closing at $29, in large demand.

Blue Ledge still continues at $2½, with increased business.

Baltic has met with a single transaction at $10; Buckeye is quoted at $2½; Crockett at $2½; El Dorado at $1½; Esmeralda at $5; Green at $1.

Golden Age and Empire maintains its last week's quotations, with largely increased business.

Kohler is quoted at $5; Milton at $11; Sacramento at $8.

Uncle Sam has found a seller at $200; hut a single transaction is noted for the week.

Real del Monte is quoted at $15. Reports from the mine are of an encouraging character.

Wide West suddenly advanced, on Saturday last, from $10 to $23, on the strength of encouraging reports from the Real del Monte mine, hut subsequently gradually declined to $13 at which figure it closed yesterday. Three hundred and fifty-nine shares have changed hands since our last report.

Utah has met with a single transaction at $15, and Silver Hill at $5.

Florida, Reese River, sold on Monday at $5; Refugio, Mexico, on Wednesday at $10.

The Pavilion.—Work upon the Pavilion is rapidly progressing. The immense dome is now being raised to its position, and workmen are also engaged in putting up the main front of the edifice. The floor is also being laid down. The building will he completed in good season for the exhibition. Arrangements have been made hy the Institute with the managers of the Christian Commission Fair, hy which a side building, 75 hy 100 feet, will he put up for the accommodation of the latter. the entrance to which will he through the Industrial Fair. The Christian Commissiou are to receive fifty free tickets to the Industrial Fair, for the lady managers, and are to have charge of the refreshments for hoth fairs.

Reese River Bullion.—According to the *Reveille* the amount of hulliou received at the different assay offices in Austin, during the month of July, was 74,450 ounces, which at $1.50 per ounce is eqnal to $111,675, a pretty good yield considering that the mills have not done half work during the month. The *Reveille* estimates that when the mills, and furnaces now in progress of erection, are all at work, the shipments will reach $500,000 per month, equal to the present shipment from Virginia and Gold Hill united. The shipments of hullion from Austin it is said, would he much larger than they are now if they could be provided with a proper escort.

Bullion from Esmeralda. The Esmeralda *Union* says the hullion shipped from Aurora during the last month foots up at one hundred thousand dollars, being a decrease of $20,000 under the previous mouth. This decrease is owing to the fact that two of onr best mills have not been in operation. Beside this, one of the best claims in the district has not taken out any hullion for some time, on account of the restraining order prohibiting them from removing the rock. Wells, Fargo & Co's agent assures us that the prospect now is that a much larger amount of hullion will be shipped from Aurora during the month of August than in any preceding month.

Times in Grass Valley.—Much improvement is beginning to manifest itself in Grass Valley. Large numhers of miners, who have spent the past year in Washoe, are now returning. More gold is being taken out of the quartz mines there than at any previous period. Some thirty experienced miners from Cornwall, England, and from Lake Superior, have arrived in that place recently, to engage in mining either on their own hook or as employees in mines already opened. Several new firms have opened business there, attracted by the general prosperity of the place.

Colorado vs. California.—While mining stocks in California are suffering a depression unprecedented in mining history any where, this class of property in Colorado does not appear to be affected to any very great extent. Other kinds of property there also commands a good price. Real estate is held at a high valuation; work cattle bring from $150 to $200 per yoke; cows are worth from $50 to $60; common riding horses from $75 to $100.

The Colorado Valley.—Important Movements.

The first shipment of freight hy water from this city to El Dorado Cañon, on the Colorado, was made on Thursday last, hy Mr. F. S. Alling, superintendent of the Hidalgo Mining Co. It left this port by the schooner Alice which will connect with the steamer Esmeralda, in the Colorado. The importance of this new route is beginning to attract much attention. Government has already adopted it as the hase of communication with Salt Lake, and as soon as the road from El Dorado Cañon to Salt Lake is put in order, all stores, munitions of war, etc., designed for that locality will pass over this route. The distance of El Dorado Cañon from Salt Lake, hy careful measurement, has been found to he 448⅛ miles. On the 10th of July, Capt. Price, with sixty men, arrived at the Cañon, commissioned to repair the road, which work has probably ere this heen commenced. With the exception of about 100 miles, of somewhat mountainous country, the entire distance of the road will he through a heautiful, fertile region, easily traversed. A fair. passable road is already in existence over this route, which has been long used hy the Mormons in passing from Salt Lake to San Bernardino and Los Angeles. All that government will have to do is to improve and straighten such parts of the road as may need such alteration.

Efforts are also in contemplation to open a route from the Cañon to Reese River.

A party of eastern capitalists left this city about ten days since, on a tour of inspection to the Colorado; their especial point being El Dorado Cañon. The party was accompanied by Judge Levi Parsons of thie city. Prof. Silliman, it will he remembered, is also *en route* for that point.

The "Philadelphia Silver and Copper Mining Company," chartered hy the State of Pennsylvania, is taking steps to practically develop, not only their own mines in Arizona, but also to aid, in the most substantial manner, the miners along the whole great Colorado Valley, from El Dorado Cañon to the head of the Gulf of California, to realize immediate returns from their labors. This movement is a most important one. The company proposes to pay cash for the ores as fast as delivered on the river's hank, and hy this means many small mines or large mines, which are in the hands of companies or individuals of limited means, can he speedily developed, many of them paying all expenses from the start. The beautiful little stern-wheel steamer, Nina Tilden, recently hnilt for this company, left, under sail, for the mouth of the Colorado, at 9 o'clock this morning.

This combined movement of capital, science and enterprise, is highly significant of the future of the Valley of the Colorado. The earnest of public opinion is already setting strongly towards this great mineral region and a new chapter in the history of Colorado and Arizona has been commenced.

The Way Italian Peasants Eat.—The traveler, in passing along the fields of Italy in the morning, will see a kettle of Indian meal and water hoiling over a fire in the field. When the mush is cooked it ie poured out upon a large flat stone, when the men, women and children gather around it, and take it np in their hands and eat it. At noon you will see the same process, and again at night. At first there was a prejudice against the American corn, as they call it, hut now it is almost the only article of food among them.

Dangerous.—Danger is apprehended in many quarters from the lofty brick walls which are being put up in many parts of the city, supported upon slender cast iron pillars, of a form and weight quite unsuitable to support such structures. It is suggested that the matter should he looked into.

A Dangerous Keepsake.—It is said that the Kearsarge, in her fight with the Alahama, received a hundred pound shell in her stern post, which, at last accounts, yet remained there, unexploded.

The Custom House "Strike."—Most of our readers are already aware that quite a number—twenty-six we believe—of the Custom House employees, in this city, recently tendered their resignations to the Collector, in consequence of their inahility to pay living expenses out of the salaries paid them in depreciated greenhacks. This step was not taken until after earnest representation had been made at Washington of the anomalous condition of things ou this coast, and the absolute necessity for making some special provisions to meet them. Even then it was not taken, as falsely intimated in an evening journal, with the view of embarrassing the administration of the Custom House Officers at a critical juncture. All the parties interested iu the movement have readily consented to give the Collector ample time to again confer with the Department at Washington, and secure either the desired relief, or, it possihle, within a reasonable time, the proper persons to fill the vacancies which would he made hy the proferred resignations.

Quite a number of the leading importing houses and merchants in the city, who are interested in preserving the integrity and proper management of Custom House affairs, have now joined the Collector in making representation of the case to the new head of the Treasury Department. The parties interested in the "strike," as it has been called, comprise many of the leading and most important clerks, whose finances absolutely forbid their continuance at their desks much longer, at the present rates of compensation. The common laborers employed hy the Collector, and hired hy the day, to do ordinary work upon the wharves, refuse to work for the sum now paid to many of the principal clerks. Were it not that these parties are hired and paid, without fixed salaries, the business of the Custom House would have stopped ere this, unless the extra expenses were provided hy the importers themselves. We have reason to believe that as much patriotism exists among our Custom House employees as can he found among any other class of citizens; hut no man can he expected to continue in the civil service of the Government, while his family is left to starve. In the military service, rations are provided, and shelter from the weather; and if want threatens a family left destitute hy the military call of their country, a generous public always stands ready to supply all that is needed. Such sympathy is never extended to persons in civil employ, for obvious reasons; on the contrary we have already seen that there are those in the community, who occupying public positions, are ready, not only to withold sympathy, hut even to add contumely to those thus situated. Let us hope that the number of such, in this community, is small.

The construction of so many new telegraph lines, and the consequent opening of so many new offices, in the United States, has created such a demand for new operators, that it has been rendered necessary to establish telegraph schools. One was very successfully opened at Chambersburg, Pa., about five months since, where about fifty operators were taught, all of whom are now employed on the different lines

Deserting.—Not very long ago, Mr. Barron, of this city, owned two hundred and forty feet in the Gould & Curry, and Andrew McCrary owned one hundred and thirty. When the dividend for June was declared, Mr. Barron's name appeared on the pay roll for only fourteen feet, and Mr. McCrary's name for only ten. These are not the only big fish which have departed for deeper waters during the last few weeks.

The Aquilla, the ship which brought out the ironclad, Camanche, and which has recently been raised from her watery bed, was sold on Saturday last, on account of the underwriters and salvors, for the sum of $2,700.

The Empire Foundry, at Gold Hill, was destroyed hy fire on the morning of July 30th., loss, $15,000. Two men sleeping in the building barely escaped with their lives.

REESE RIVER.

If any considerablo rcliance is to be placed upon what arc given as positive assertions with regard to the yield of the Reese River mines, that region certainly has a bright future in store. The mills that hnve long bcen lying idle appear now to be generally at work. Many new ones are going up in various localities, and roasting furnaces are generally being bnilt in connection with them. The rock nf that sectinn appears to be of such a character that only by roasting can a tithe of its richness he extracted. The Oregon mill recently tested this question, with the following results:—Two tons of ore were selected, one ton being worked the ordinary way, nnd yielding $20; the other ton was submitted to tho roasting process and afterwards worked with n result of $200. Consequently ronsting furnaces arc now tho order of the day nt nearly all the mills of Reese River. New ledges arc almost daily reported, nnd extraordinary yields from those already opened are as frequently heard from. Large quantities of bullion are constantly being sent forward to this city. We would call the especial attention of readers to our summary of Reese River mining news in the present issne, as fully substantiating the above.

According to the *Reveille*, fifty men, or more, are constantly at work, at the present time, in the vicinity of Austin, with hand mortars, and making from five to ten dollars per day to the hand. Many buy their rock, generally selected ore; others pick it np as it lies scattered about in boulders. All the capital required to establish a quartz mill of this class is money enough to buy a druggist's mortar. Some who have done well at this style of work, have extended their husiness by rigging up small sized stamps worked with cams on a shaft turned with a crank by hnnd. These little mills, says the *Reveille*, are sometimes quite ingeniously constructed, easily and profitably worked, and bid fair in some few instances to grow into full sized quartz mills. As capital is so shy, at the present time, of mining investment, the miners there appear to have come to the conclusion that they must depend on their own resources. The idea is a good one, and where men once adopt resolutions of this kind, they are sure to overcome all obstacles and triumph in the early future. This is the right kind of mining progress, and just the way to build up a prosperous and healthy mining community. Let the miners of Reese River not be ashamed to be found creeping to-day; they will all the sooner he able to walk strongly and proudly, masters of their situation, and in the full tide of successful experiment.

From Idaho.—Dr. R. W. Murphy and Jas. Childs arrived at Sacramento on Monday, from Jordon Creek, Idaho, in eleven days, on horseback, a distance of six hundred miles. They came by way of Humboldt, N. T, and report that mining prospects in Idaho are very gloomy. Miners and others are leaving in all directions. Dr. Murphy brought with him a quantity of gold dust from placer diggings on Jordan Creek, twenty ounces of which have been assayed, and found to he worth only eleven dollars per ounce. The travelers report that when they left there was still considerable trouble with the Bannock Indians, who continued hostile. The desperadoes having been about wiped out, good order was maintained by the regular authorities, who are reported as vigilant and efficient.

The Stockton *Independent* has just entered npon its seventh volume. This is one of the most useful and best edited papers on tho Pacific Coast. It embraces, in its discussions, nearly every topic of general interest in the community, and its subjects are handled with a force and intelligence rarely met with in newspaper literature. It is edited by Samnel Seabough, Esq.

Soldier's Pay.—The soldiers in the employ of the United States now receive fifty-three and a half cents per day more than the soldiers of any other nation.

The Grass Valley National, late a tri-weekly, is now making its appearance daily.

Prof. Silliman, according to the Los Angeles *Star*, during his visit at Los Angeles, expressed himself as greatly pleased with the vineyards there, and the produce of the grape obtained in the cellars was so superior to what is represented as wine elsewhere, he could not hardly believe but what he was being imposed upon, and first class foreign wine represented as home manufacture. He took a look at Mr. Keller's cotton and tobacco plantations, with which he was much pleased; in many instances conferring great favors on his hospitable entertainers, hy valuable scientific suggestions, which he seemed very willing to communicate. His readiness in this particular was remarked and appreciated, and no where did he go without communicating information either in science or the practical treatment of the every day concerns of the vineyard, cellar, or plantation. He was greatly interested in their asphaltum deposits, looking upon them as among the most valuable of the resources of the locality. He gave no countenance to the theory held by some that these asphaltum beds overlay coal. On the contrary, coal has never been found in any such connection. But he gave great encouragement to capitalists, hy the assurance that if these deposits were pierced, petroleum would be found in great abundance. On leaving Los Angeles, he proceeded by way of Santa Anna, visiting the coal and marble beds there; thence to the Temescal tin mines; afterwards he will go to the Colorado country. He will visit El-Dorado Cañon, and probably return to this city overland.

Mammoth Tooth.—The workmen employed in the Tellurium Mining company's claim, Amador county, recently came across an immense tooth, supposed to have once belonged to a member of the extinct mastodon class of animals. It was taken from ninety feet below the surface of the earth, and imbedded in a slate formation. It will weigh near three pounds, measures some eight inches long and three inches wide, has four ridges on the surface, covered with thick cement or enamel. The ridges are worn so much that we judge the proboscidian pachyderm in whose jaw it was socketed must have been an elderly animal, or subsisted on coarse vegetable food, that tested the capacity of even his enormous grinders to the utmost. The tooth, which is a fine specimen, may he seen at the California Exchange. It will be enclosed in a case and placed on exhibition in the Industrial Fair shortly to be held in this city.

Falling Off of American Shipping.—Our English cousins, by allowing privateers to be fitted out from their ports, have struck a terrible blow at our commerce, and are enriching themselves at our expense. The following table, which exhibits the foreign trade of New York, gives the proportion of exports and imports under the American and foreign flags, in the years named. We give the figures in round numbers:

Year.	American vessels.	Foreign Vessels.
1857.....	$240,000,000.....	$105,000,000
1858.....	154,000,000.....	84,000,000
1859.....	214,000,008.....	168,000,000
1860.....	234,000,000.....	150,000,000
1861.....	166,000,000.....	139,000,000
1862.....	150,000,000.....	239,000.000
1863.....	83,000,000.....	321,000,000

Compare the figures, and then say whether we can expect Englishmen to rejoice over the destruction of the Alabama, or frown on the aspirations of Semmes after another steamer.

A Rocking Stone.—It is said that a rocking stone, weighing about five tons, has been found near Steamboat Springs, in Washoe, which may be moved several inches by a slight effort of the hand. It is pronounced a great curiosity.

A Lofty Building.—The Imperial Hotel, at Gold Hill, N. T., will be five stories high—four stories above the basement. It will be of the Grecian style of architecture, to be built of brick, and plastered in imitation of stone. Its dimensions are 63 feet wide, 98 long, and 60 feet high. It will cost $100,000. It will not be finished before next spring. Mr. Joseph Gosling is the architect. When finished this building will present an appearance equal to almost any house in San Francisco.

A Magnetic Discovery.—Dr. A. von Waltenhofen has communicated to *Dingler's Polytechnisches Journal*, an account of a curious magnetic discovery which he has recently made. It is a well-known fact that the magnetism of an electro-magnet does not entirely disappear with the cessation of the magnetizing current. Dr. A. von Waltenhofen has, however, observed that the amount of this residual magnetism, as it is called, is dependent upon the manner in which the current is interrupted. If this interruption takes place suddenly, the residual magnetism is much less than when it takes place gradually. A still more interesting circumstance has been observed by him—viz: that the residual magnetism obtained by suddenly breaking a very strong current, is sometimes of an opposite nature to that previously existing in the electro-magnet. This fact, which he has hitherto only noticed in very soft iron, is of great interest, inasmuch as it furnishes a new and simple proof that magnetism is not caused by the separation of two fluids, but by the motion of magnetic molecules, to which is opposed a certain amount of frictional resistance. With much ingenuity he compares the state of each magnetic molecule of the electro-magnet to that of a spring which is bent back. If the spring he suddenly released, it will return very nearly to its original position, or even go beyond it. On the other hand, if it be released gradually, it will stop at a point still further removed from its original position.—*London Mechanics' Magazine.*

Gun Powder—A New Invention.—Capt. Edward Schultze, of Potsdam, England, has invented an improved mode of manufacturing gunpowder. He proposes to take the natural grown-up trunks of trees, clear them from the roots and the bark, and to cut these trunks into thin plates of the diameter of the trunks themselves. These timber plates are cut by machinery into little grains of equal length and breadth with the thickness of the plates. The timber grains so obtained will become tho powder grains. The first object of the chemical labor is to obtain the grains as porous as possible, and to clear them from all external mechanical substances. This is obtained by the application of chloride, and then of nitrous acid; these grains are made explosive by nitrate of potash, and in some instances by "kaliferrohydrocyanicum." The proportions are varied, according to the purpose for which the powder is to be used. In case the powder is to have a more gradually acting, not very explosive force, the first combustible material (namely, the flammable but not explosive grains) will be ground into dust. This dust is then treated by the same process of the above mentioned mixtures to produce the explosive power. From the matter so obtained a kind of cake of relative strength is produced by means of pressure, and these cakes are the material from which by the necessary machinery the powder grains may be obtained.

New School House.—The foundation of the new brick school-house on Fifth street, in this city, which is designed to be a model building of its class, and the largest belonging to the San Francisco Public School Department, are now being laid, and the main walls are already commenced. The building will be up and closed in before the setting in of the rainy season.

Nearly Ready.—The magnificent hotel in process of construction on the corner of Bush and Sansome streets, is nearly completed, and will probably be thrown open to the public by the first of September. It is to be called the Cosmopolitan.

The Grape Crop of California this year promises to be finer in quality and more abundant in quality than ever before. The finer table grapes, Sweetwaters and Muscats, are now quite plentiful in market.

Gould & Curry.—The Gould & Curry Mining Company have declared a dividend of $50 per foot on their capital stock, for July payable at the Company's office in this city.

A Boy near Downieville was poisoned the other day by eating wild berries. That which was peculiar in the post mortem was that nearly all the external surface of the body was covered with patches of livid hue, whilst no red blood was discovered in the internal organs.

South Boise.—The Mountain *Messenger* is informed that the result of the first cleaning up of the Ophir Gold and Silver Quartz Ledge, situated at South Boise, was as follows: Five days' run, two arastras, cleaned up $3,990. No. of feet in the claim, 1600; No. of stockholders, 43. The ledge is leased for one year to Messrs. Wiley & Co.; they giving the stockholders one-third gross amount taken out. Sales of stock $35@$40 per share—of one foot.

Record of New Incorporations.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Folsom Discovery G. & S. M. Co.—Reese River. Trustees: J. B. Helm, Ed. W. Walton and J. D. Cornell. Capital stock, $100,000.

Shamrock No. 2, North Co.—Nye County N. T. Trustees: James Hubbard, M. M. Campbell and W. T. Remmington. Capital stock, $100,000.

Caledonia G. & S. M. Co.—Storey County, N. T. Trustees: C. L. Straight, William Whaley and George Dart. Capital stock, $80,000.

Marysville G. & S. M. Co.—Storey County, N. T. Trustees: F. E. Reel, J. N. Rutter and J. C. Tickner. Capital stock $120,000.

Miners' Strike in Washoe.—The employes of the several mining companies at Gold Hill were notified of a reduction of their wages on the 1st instant, from four to three and one-half dollars a diem. The men at supper refused to go to work for such prices, and not only refused to go to work themselves, but in protection to their rights, determined not to allow any one else to work at reduced wages. At 8 P. M. a large crowd assembled and procuring the services of the Gold Hill Brass Band, started in procession for Virginia, increasing as it went, and when it reached the International Hotel assumed the vast proportions of a multitude of men. The air was resonant with cheers for "no reduction of labor" and groans for the movers of a lower tariff for work. Several gentlemen addressed each particular locality. A committee was appointed to act for the multitude, and confer with the employers. The result was that all hands went to work the next morning at the old rates of $4 per day. The workmen met on the evening of the 2d instant for the purpose of organizing a Miner's Protective League. All is now quiet on the Comstock.

Mining Accidents.—A man by the name of Hamilton, from St. Lawrence county, N. Y., while at work in the engine shaft of the Ophir mine, on the 27th ult. was struck by the descending bucket and so badly injured that he died in a few hours.

The day after the occurrence of the above, another still more dreadful accident occurred at the Milton mine, caused by some defect in the break attached to the whim, by which three men, whose names we have not learned, were precipitated to the bottom of the shaft, a depth of 200 feet, while a fourth man was carried up to the top of the hoisting gear and was in imminent danger of being smashed. Two of the men are reported as fatally injured. The third man, strange to state, did not appear to be much injured, as he got up and walked off after being hoisted up from the bottom of the shaft.

The Treasure lost in the Golden Gate appears to be as far from the reach of the owners as ever. Having been rescued from its watery vaults, it is now so completely locked up under the bars and bolts of the law, that an expert burglar even would have a poor chance of making anything out of it. It is likely to fare very much like the ancient oyster.

Valuable Relic.—Many of our readers will recollect that when the ill-fated steamer Lexington was burned on Long Island Sound, near thirty years ago, a man went ashore on a bale of cotton. The bale of cotton was kept in the family until a month ago, when it was sold in Providence for $500.

A Tedious Mining Suit.—In the case of the Antelope and Young America mining suit, before the District Court at Anrora, a few days since, one witness was kept on the stand a day and a half. There are said to be in the case about one hundred witnesses, the duration of whose testimony may be judged by the above instance.

The weather throughout the interior has been very hot during the past ten days.

OLD TDINGS.—Give me the old songs, those exquisite bursts of melody which thrilled the lyre of the inspired poets and minstrels of years ago. Every note has borne upon the air a tale of joy and rapture—of sorrow and sadness. They tell of days gone by, and time hath given them a voice which speaks to us of those who once breathed and sang those joyous old melodies—of what they now are and what we soon shall be. My heart loves those melodies; may they be mine to learn till life shall end, and as I "launch my boat" upon the sea of eternity, may their echoes be wafted to my ear, to cheer me on my passage from the scenes of earth and earth land.

Give me the old path, where we have wandered and culled the flowers of love and friendship in the days of "Auld Lang Syne," sweeter, far, the dells whose echoes have answered to our voices; whose turf is not a stranger to our footsteps, and whose rills have, in childhood's days, reflected back our forms and those of our merry playfellows, from whom we have parted, and meet no more in the older books we loved so well. May the old paths be watered with Heaven's own dew, and be green forever in my memory!

Give me an old house, upon whose stairs we seem to hear light footsteps, and under whose porch a merry laugh seems to mingle with the winds that whistle through old trees, beneath whose branches lie the graves of those who once trod the halls, and made the chambers ring with glee. And O! above all, give me the old friends—hearts bound to mine in life's sunshine hours, and a link so strong that all the storms of earth might not break it asunder—spirits congenial, whose hearts through life have throbbed in unison with our own? O, when death shall still this heart, I would not ask for aught more sacred to hallow my dust than the tear of an old friends. May my funeral dirge be chanted by the old friends I loved so fondly: who have not yet passed away to the spirit's bright home!

NATURE PLAYING AT MUD PIES.—In 1828, Dr. Duncan observed in certain sandstones the footprints of tortoises, and following up the clue thus furnished to a suggestive mind, the Dumfrieshire discovery has expanded into a separate science called Ichnology. It amounts to this. Myriads of millions of years ago, the tide was out, and the beach was smooth and soft and flat, and there fell a shower of rain and pitted the surface in a particular way; part of it was hail, which made its own particular mark. Then came a little salt water lizard, or a crab, sliding along, or a frog, the size of a well-fed pig, leaping and waddling by turns; and on the micacious mud each inscribed the whole history of that day's proceedings—a little autobiography or Pilgrim's Progress in the genuine reptilian or batracian handwriting; and there it remained until the tide gently rose and with fine sand or clay filled up the impressions. And now that the whole is converted into rock, there comes some exploring Miller or Mantel, and turns over the stony leaves and reads the record as plain as if it had been printed yesterday.—*Good Words.*

MONADS.—While the telescope fails to reveal the boundaries of the universe, so the microscope is insufficient to conduct our vision to the bottom of the descending scale of creation. Monads are the smallest of living creatures yet discovered. One species is only one twenty thousandth of an inch in length. A short one-tenth of an inch in diameter occupies more space than thirteen thousand millions of these animated atoms, yet they have all the organs necessary for their range of existence. Their powers of reproduction are truly wonderful. The gallonella, a species of the box chain animalcule, one individual being in 24 hours will increase to the number of one hundred billions, and increase equal to 100 times the inhabitants of the globe. What mathematician can calculate, or what mind can comprehend such an increase for only a few days? What an immense space intervenes between these monads and the whale a hundred feet long! yet all of this space is filled up by at least 250,000 of animated beings.

VOCAL MACHINERY OF BIRDS.—It is difficult to account for so small a creature as a bird making a tone as loud as some animal a thousand times it size; but a recent discovery shows that in birds the lungs have several openings communicating with corresponding air-bags or cells, which fill the whole cavity of the body from the neck downward, and into which the air passes and repasses in the progress of breathing. This is not all. The very bones are hollow, from which air-pipes are conveyed to the most solid parts of the body, even unto the quills and feathers. The air being rarified by the heat of their body, adds to their levity. By forcing the air out of their body, they can dart down from the greatest hights with astonishing velocity. No doubt the same machinery forms the basis of their vocal powers, and at once resolves the mystery into a natural ordering of parts.

Scraps of Science.—One of the most wonderful achievements of astronomers is the weighing of the bodies comprising the solar system. The mass of the sun is 359,551 times greater than that of the earth and moon, and 700 times greater than the united masses of all the planets.

A flash of lightning on the earth would be visible on the moon in a second and a quarter; on the sun, in eight minutes; on Jupiter, (when furthest from us), in 25 minutes; on Uranus, in two hours; on Neptune, in four hours and a quarter; on the star Vega, of the first magnitude, in 4,000 years: yet such stars are visible through the telescope!

La Place, the great French astronomer, says: —"I have ascertained that between the heavenly bodies all attractions are transmitted with a velocity which, if it be not infinite, surpasses several thousand times the velocity of light." His annotator estimates that speed as being eight millions of times greater than that of light.

The circumference of the earth is 25,000 miles. A train traveling incessantly night and day at the rate of 25 miles an hour, would require six weeks to go around it. A tunnel through the earth, from England to New Zealand, would be nearly 8,000 miles long.

The barking of dogs is an acquired hereditary instinct, supposed to have originated in an attempt to imitate the human voice. Wild dogs, and domestic breeds which have become wild, never bark, but only howl. Cats, which so disturb the inhabitants of civilized countries by their midnight "caterwaul" are, in their wild state in South America, quite silent.

The dark races of men have less nervous sensibility than the whites. They are not subject to nervous disease; they sleep sound when sick; nor does any mental disturbance keep them awake. They bear surgical operations much better than the white people.

A certain species of fungus has been known to attain the size of a gourd in one night; and it is calculated that the cellules of which it is composed must amount to forty seven thousand millions. If it grows in twelve hours, this would give four thousand millions per hour, or more than six millions per minute.

The Closing of Life.—Of all periods and events of life, the concluding scene is one of the deepest interest to the person himself and surviving spectators. Various are the ways in which it comes, and various the aspects it presents; but it is solemn in all. What can be more so than the approach of that moment which, to the dying man, is the boundary between time and eternity; which concludes the one and commences the other; which terminates all his interests in this world, and fixes his condition for a never-ending existence in a world unknown? What can be more solemn than those moments of indiscribable anxiety, when the last sands of the numbered hour are running out; when the beating of the heart has become too languid to be felt at the extremities of the frame; when the hand returns not the gentle pressure; when the limbs lie stiff and motionless; when the eye is fixed, and the ear turns no more toward the voice of consoling kindness; when the breath, oppressive and laborious before, becomes feebler and feebler till it dies slowly away, and to the listening ear there is no sound amid the breathless silence, nor to the arrested eye that watches with an unmoving look of thrilling solicitude for the last symptom of remaining life, is motion longer perceptible; when surrounding friends continue to speak in whispers and to step through the chamber on the tiptoe of cautiousness, as if still fearful of disturbing him whom the noise of a thousand thunders could not startle, and who has fallen into the last sleep from which nothing shall ever rouse him but the "voice of the archangel and the trump of God?"

In Plumas county, the other day, a man endeavored to snap off a rattlesnake's head by catching him by the tail. The snake fastened his fangs in the man's hand, from which they were extracted with difficulty. The snake died but the man recovered after a large dose of whisky and application of ammonia.

By the last statistics of Australia, we learn that there are only 2,500 Americans in those British colonies. Five years ago there were about 10,000, but most of them have returned to California.

The Taunton *Gazette* tells of a turkey which stole away on a matrimonial speculation, and was found in the woods sitting on a nest, which she occupied conjointly with a partridge, the pair sitting side by side on eggs of both species indiscriminately mixed.

"I wonder where these clouds are going" asked Flora, pensively, as she pointed with her delicate finger to the heavy masses that floated in the sky. "I think they are going to thunder!" said her brother.

There are said to be 20,000 Southern women in the boarding houses in New York city.

A GREAT INDUSTRIAL FAIR!

—TO BE—

Opened in San Francisco,

—ON THE—

30TH OF AUGUST, 1864.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO are preparing for an Exhibition of Arts, Inventions, Manufactures of Industry in general, upon a scale more grand, attractive and useful than ever before seen upon the Pacific Coast. Their Pavilion, to be built for the purpose, will occupy Union Square and will contain every convenience and appliance for an effective display. The Institute appeals to all persons within the scope of its influence, who are engaged in different branches of industry and art, to prepare and forward for Exhibition such articles as they may invent, discover, or make, that are useful, instructive, curious, or suggestive. There is scarcely an occupation in life that cannot supply some article that can be so considered, and by their public exhibition they may start the golden of invention in some other branch of industry or skill, the successful development of which may greatly enrich the State. The premiums and published reports of the Exhibition will widely advertise their qualities and merits.

Each age and country has new wants, which the progress of civilization creates and ingenuity gratifies. Those of our own day and section are improved methods and machinery for reducing ores of the precious metals. A striking feature of the Exhibition will be the number and variety of these, worked by the inventors. It is hoped that information most useful to the mining interest will be elicited. Miners are invited to send ores for exhibition, and trial, in quantities sufficient to be worked seperately in the different machines, in order to test both the relative merits of the machines and the value of the respective metallic veins.

The various transportation companies of the Pacific states and territories will, with commendable liberality, transport all articles intended exclusively for exhibition, free of charge, and Wells, Fargo & Co., in like manner, will take charge of them.

All articles forwarded should be labeled— "For the Industrial Fair," and be directed to C. U. Porter, agent.

Regulations for the Exhibition.

1—Persons intending to take part in the Exhibition are requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend to exhibit, and the probable amount of space required therefor.

2—The Pavilion will be open for the reception of articles for exhibition on Monday, the 23d day of August, and will continue open for that purpose until Monday, the 29th. The Exhibition will open to the public on Tuesday, the 30th day of August.

3—The name of every article should be attached to it; also a description pointing out its merits, when thought desirable by the exhibitor.

4—When articles are entered, a check for the same will be given, which must be presented and surrendered when the articles are withdrawn.

5—Articles intended for sale will be labelled accordingly, but can not be removed until the close of the Exhibition, except by the written permission of the President.

6—Liquid, fancy or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the President.

7—All articles deposited will be at the risk of the owners, who are invited to be present during the hours of Exhibition. In the intervals sufficient measures will be taken for the protection of property.

8—On the day following the opening of the Exhibition, each class of exhibitors will meet to choose, by ballot, their own committees of Award; failing in this for one week, Judges will be appointed by the Executive Committee. The Executive Committee will award premiums for such articles as the several judges shall decide to be worthy of the same. The premiums will be delivered as soon as they can be prepared.

9—The morning of each day, until 9 o'clock, will be appropriated to the judges, and visitors will not be admitted during that time.

10—In case of misunderstanding, application may be made to the Executive Committee, who will be at all times in attendance.

11—Steam power will be provided, that machinery of all kinds may be seen in operation; and every possible facility will be given to exhibit all working machinery to the best advantage.

12—Exhibitors or their agents will receive free tickets of admission when, in the opinion of the President, the articles exhibited by them have such value, interest, or merit as to deserve it; but the transfer of any such tickets will work a forfeit of the privileges conferred by them.

13—All communications to be addressed to WILLIAM PATTON, Corresponding Secretary.

Executive Committee.

19-tf

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Smith & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide and rapidly reaching influence among intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

New Volume.—The *Mining and Scientific Press*, published at San Francisco, has entered upon its fifth year of existence. It has been enlarged to a sixteen page paper, and is flourishing like a green bay tree. (We don't insinuate that it is wicked.)—*Red Bluff Independent.*

"A Slight Cold," Coughs.—Few are aware of the importance of checking a Cough or "slight cold" in its first stage; that which in the beginning would yield to a mild remedy, if neglected, soon attacks the lungs. "*Brown's Bronchial Troches*" give almost immediate relief. *Military Officers and Soldiers should have them, as they can be carried in pocket and taken as occasion requires.* Agents for California 1-1m Redington & Co., San Francisco.

REMOVAL.

The offices of the Peoria and Winnemuck Gold and Silver Mining Company are removed to Summit City, Alpine Co., Cal. By order of the Board of Trustees.

141- W. A. H. TOWN, Secretary.

Caution.—Libertad Gold and Silver Mining Company, District of Ures, Sonora, Mexico.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Enlarged.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and berewith append tbat section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Pacific Powder Mill Company, Marin Co., California.

NOTICE.—A special meeting of the Stockholders of the above Company, will be held at the Office, No. 708 Montgomery Street, San Francisco, on Saturday, the 20th day of August, 1864, at 7 P. M., for the purpose of amending the By-Laws. By order of the Trustees.

4-4t A. H. MEYERPETER, Secretary.

READY ROOFING

READY TO NAIL DOWN.

READY ROOFING
At less then half the cost of tin roofs.

READY ROOFING
More durable than Tin.

READY ROOFING
Suitable for steep or flat roofs.

READY ROOFING
For all kinds of buildings, in all climates.

READY ROOFING
Easily, cheaply, and quickly put on. Needs no coating over with cement after it is nailed down.

READY ROOFING
Made of a strong woven fabric, thoroughly saturated and covered upon both surfaces with a perfectly water-proof composition, and put up in rolls ready for use—40 inch wide, and 75 feet long.

WE ALSO MANUFACTURE
Liquid Cement,
FOR LEAKY TIN ROOFS.
Much cheaper and more durable than oil paint. Also,

Compound Cement,

For Leaky Shingle Roofs,
Which will often save the cost of a new roof.

Samples of Ready Roofing and Circulars sent by mail when desired. Favorable terms made with responsible parties who buy to sell again.

Putnam's Clothes Wringer.

IT IS THE ONLY RELIABLE SELF-ADJUSTING WRINGER. No wood-work to swell or split. No thumb-screws to get out of order. Warranted with or without cog-wheels. It took the FIRST PREMIUM at Fifty-Seven State and County Fairs in 1863, and is WITHOUT AN EXCEPTION the best Wringer ever made. Patented in the United States, England, Canada and Australia. Agents wanted in every town, and in all parts of the world. Energetic agents can make from three to ten dollars per day. Sample Wringer sent Express-paid on receipt of price. No. 2, $6.50. No. 1, $7.50. No. F. $8.50. No. A. $9.50. Manufactured and sold, wholesale and retail, by

THE PUTNAM MANUFACTURING CO.,
No 13 Plait Street, New York, Cleveland, Ohio and Bennington, Vt. S. C. NORTHROP, Agent.

What Everybody Knows,

Viz: That Iron well galvanized WILL NOT RUST; That a simple machine is better than a complicated one; That a Wringer should be self-adjusting, durable and efficient; That Thumb-Screws and Fastenings cause delay and trouble to regulate and keep in order; That wood soaked in hot water will swell, shrink and split; That wood bearings for the shaft to run in will wear out; That the Putnam Wringer, with or without cog-wheels, will not tear the clothes; That cog-wheel regulators are not essential; That the Putnam Wringer has ALL the advantages, and not one of the disadvantages above named; That all who have tested it, pronounce it the best Wringer ever made; That it will wring a Thread or a Bed-Quilt without alteration.

We might fill the paper with testimonials, but insert only a few to convince the skeptical, if such there be; and we say to all, TEST Putnam's Wringer. Test it THOROUGHLY with any and all others, and if not entirely satisfactory, return it.

Putnam Manufacturing Co;—

GENTLEMEN. I know from practical experience that iron well galvanized with zinc will not oxydize or rust one particle. The Putnam Wringer is as near perfect as possible, and I can cheerfully recommend it to be the best in use. Respectfully yours,

JNO. W. WHEELER, Cleveland, Ohio.

Many years experience in the galvanizing business enables me to endorse the above statements in all particulars.

New York, Jan., 1864. JNO. C. LEFFERTS.
No. 100 Beekman St.

We have tested Putnam's Clothes Wringer by practical working, and know that it will do. It is cheap; it is simple; it requires no room, whether at work or at rest; a child can operate it. It does its duty thoroughly; it saves time and it saves wear and tear. We earnestly advise all who have much washing to do, with all intelligent persons who have any, to buy this Wringer. It will pay for itself in a year at most. HON. HORACE GREELEY.

STILL IMPROVING!

VOLUME IX
—OF—
The Mining and Scientific Press

COMMENCES
ON THE FIRST OF JULY, 1864,
WITH
An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation of such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders.
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes,

In fact, upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

REPORTS OF THE MECHANICS' FAIR

Will form a feature of Volume IX, as we intend to give a careful description of all new inventions exhibited.

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining Officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an adverse or unconmmon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to intertere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on prescuting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible, and our client is not charged for the service. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehead by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequaled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & CO., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, through delays on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stemping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunc tion from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings thereto connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel and state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

THE MINING AND SCIENTIFIC PRESS is published every Saturday morning. Each number contains SIXTEEN PAGES of SIXTY-FOUR COLUMNS. Terms, by City Carriers, 50 cents per month. By mail, $5 per annum, or $3 for six months. Single Copies 12½ cents. Advertising rates very low.

DEWEY & CO., Publishers.

Office, 57 Government House, Corner Sansome and Washington streets.

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 57 Government House, corner Washington and Sansome streets, San Francisco.

G. E. MOORE,

Assayer and Analytical Chemist,

Having established a Chemical Laboratory, furnished with every requisite for delicate Analytical work, is prepared to execute the Assay and Analysis of Ores, Mineral Waters, Guanos, etc., with accuracy and dispatch. No. 334 Montgomery Street.

Deetken & Co's

METALLURGICAL WORKS.

We respectfully inform the mining community in general, that having completed our

NEW SMELTING FURNACES

We are now ready to smelt every kind of Silver and Gold Ores. Parties unable to get satisfactory results by amalgamation, will find it to their interest to have their ore smelted at our works.

LARGE CONTRACTS ACCEPTED AT LOW RATES AND RESULTS GUARANTEED.

Facilities on hand to work all and every kind of Gold and Silver bearing ores as well as it can be done in Europe.

Amalgamation & Chloration

Carried on, on Silver and Gold ores as heretofore.

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, Juue 23, 1864. 1-3m

Lloyd's New Amalgamator

Is a Complete Success.

THE RESULTS OF THE WORK DONE BY IT DURING THE past week are:—From 500 pounds of tailings from Volcano, Amador county, worked for Mr. C. B. Culver, was obtained 6 oz. 12 dwts., equal to $40 to the ton of 2,000 pounds. The original ore was worked by the old Mexican arastra. From 6 0 pounds of tailings, the original ore having been worked by Professor Ryerson's Superheated Steam Machine, was obtained 1½ ozs. Ryerson's machine having only got 5 ozs. to the ton from the ore.

Result from 50 pounds of ore from Amador county, worked for Mr. H. F. Williams, of Graves & Williams, of the Pacific Fruit Market, in this city, was obtained:

Gold	$73 33
Silver	42
To the Ton	$73 75

The assay is made by Messrs. Molitor & Co.

From 2 pounds of the same ore, worked for the same party, was obtained:

Gold	$63 30
Silver	04
To the Ton	$63 34

Assay made by Kellogg, Hewston & Co.

The tailing from which the above ore was taken has turned out over $10,000 gold and silver, and the average yield as worked upon the spot, has only been $6 to the ton. Varney's Pan has obtained as high as $ 5 to the ton from this ore—the difference in favor of Lloyd's Amalgamator being over Varney's Pan, $53 54.2 per ton; and over the works at the mill, $62 34 2 per ton. Result from 5 pounds of ore from Queen City Company's claims, El Dorado Canon, Arizona Territory, worked for Mr. T. Mudge, who obtained: Gold, $ .19, Silver, $1.52, amounting to $2.71.50—equal to $361.33 1 0 to the ton—the assay being made by Messrs. Molitor & Co. Mr. Beelken, at his metallurgical works in this city, obtained by the Varney Pan $.54 to the ton—the difference in favor of Lloyd being $207.33-100 to the ton.

Result of 65 pounds of ore from the Lady of the Lake Company, Leland Lode, San Francisco District, Arizona Territory, worked for C. W. C. Rowell, was obtained $7.44 in gold, $0.25 in silver—$7.69—equal to $2 6. 8-10. Assay made by Messrs. Molitor & Co. 100 pounds of the same ore, worked by Wheeler's Pan, and assayed by Kellogg, Hewston & Co., yielded $7.38 99—equal to $11.60 to the ton. Difference in favor of Lloyd being $104.58-100 to the ton. Lloyd's is undoubtedly the best Amalgamator yet introduced, and certain to supersede all other Amalgamators now in use. Communications for Mr. Lloyd, either for assaying or other machines to be addressed to the care of Messrs. Kustell Brothers, Metallurgical Works, Bryant street, between Third and Fourth streets, San Francisco. 20v8-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgumaling purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from where it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines come to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHEELER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in milling are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st, 1864. 14v8-tf

NORTH BEACH

Quartz Mill and Reduction Works,

ARE PREPARED TO WORK GOLD AND SILVER ORES in large or small quantities.

Working assays made of small lots, and all kinds of ores crushed at short notice.

Our new and complete Machinery, will enable us to give results fully up to the merits of rock.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order, they will run for years without repairs.

Prices, from $30 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

Office, No. 322 Front street, San Francisco. 5-4t

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Libertad Gold and Silver Mining Company, District of Ures, Sonora, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of July, 1864, an Assessment of five dollars per share was levied upon the Capital Stock of said Company, payable in United States gold coin, to the Secretary at his office, No. 8 Masonic Temple, San Francisco.

G. B. LARRABEE, Secretary.

5-4t Office, 528 Clay street, San Francisco, Cal.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Quartz Hill Gold Mining Company, Placerville, El Dorado County, California.

Notice.—There are delinquent upon the following described stock, on account of assessment levied on the 23d day of June, 1864, the several amounts set opposite the names of the respective shareholders, as follows, to wit:—

Office, 621 Clay Street, San Francisco. 3-4t

Wellington Gold and Silver Mining Company, Wellington Ledge No. 2, Santa Catalina Island.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of July, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable on the 16th day of July, 1864, in United States gold coin, to the Secretary, at his office, No. 605 Sacramento street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Wednesday, the 17th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 31st day of August, 1864, to pay said delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. C. GARDNER, Secretary,

Office, 605, Saeramento Street, San Francisco.

Postponement.—The advertisement of delinquent stock on the above assessment, is postponed until August 20th, 1864, and the sale thereof is postponed until September 3d, 1864. By order of the Board of Trustees.

3-5t S. C. GARDNER, Secretary.

Warfield Mining Company, Placer County, California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 25th day of June, 1864, an Assessment of fifteen cents per share was levied upon the Capital Stock of said Company, payable immediately to Thatcher Ross, Gold Hill, Placer County, or to the Secretary at the office of the Company in San Francisco.

Any stock upon which said Assessment shall remain unpaid on the 6th day of August, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 22d day of August, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the Sale. R. K. ALLEN, Secretary

Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unottainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privilliges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

Also, having purchased of the late firm of Hutchinson & Wickersham, Canal street, their entire stock of

BEDSTEADS, CRADLES, FURNITURE, &c.,

They now offer to the public, at their New Warehouse, the most extensive stock of Ornamental Iron Goods to be found in the United States. They have also purchased of the NEW YORK WIRE RAILING CO., the patent right and machinery for making

Wire Railing, Farm Fence, Window Guards,
GRATING, COAL SCREENS, &c.,

And will continue the *Exclusive Manufacture* of the same at their Works.

CHASE & CO.,
(Opposite St. Nicholas Hotel,) 524 Broadway, New York.

Orders may be sent through the AMERICAN ADVERTISING AGENCY, 389 Broadway, New York.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

Changing Address.—The address of patrons will be changed upon our books as often as desired, if parties will give us the name of the places *from* which and *to* which they remove.

ENLARGEMENT.—The Mining and Scientific Press has again been enlarged by the addition of a fourth column to every page. It is conducted with ability and enterprise, and is meeting with the constantly increasing patronage which it deserves. There is a straightforwardness and fearlessness about it which we admire.—*S. F. Bcangel.*

"MINING AND SCIENTIFIC PRESS."—This excellent and valuable paper has been enlarged by the addition of sixteen columns. It is one of the most complete and interesting mining journals in the United States.—*Daily American Flag.*

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, AUGUST 13, 1864.

VOLUME IX. Number 7.

Contents of Present Number.

☞ For New Mining Advertisements see last page. ☜

Vol. IX.—No. 7.—Improving; Wonders of Creation; The Hossefross Monument; Geological Speculations; The Pavilion and Fair; New Theory of a Limitless Atmosphere; Oregon, Letter to Professor Whitney; Miners' Strike in Esmeralda; British Columbia Mines; Monster Blast; Economic Treatment of Poor Copper Ores; High Prices, Their True Cause; Freezing to Death; Gravity and Force; Mechanical Polarity; Reminiscences of the Plains; The Sand Hills of the Platte; The Decay of Vital Power; Time's Varied Pace; Mining Summary; What We Want to Make Times Good; Four Lectures; Another Quartz Crusher; Low's Grain Separator; Explosion of Gun Cotton; Cast Iron Steam Boilers; Marvelous Mechanical Contrivance; Bearing Surfaces; New Stamp Duties; How to Repair the Silvering of Looking Glasses; An Item for House Wives; What is Astrahan; Yankee Mechanical Skill; Superior Brick; Accumulative Labor; Double Flowers; Financial Affairs; A new Stock Fraud Attempted; The Location of Smoky Valley; Mining Share Market; The Copper Interest in Calaveras; Mount Diablo Mines; Copper Mines in Trinity Center; Election of Officers; Desert of Sahara; Hydraulic Wheels.

IMPROVING.—Evidences of improvement are beginning to appear in most parts of the State and adjoining territories. Our exchanges, especially those in California, as will be seen by our unusually full report, for the present week, from our home mines, exhibit unmistakeable symptoms of returning prosperity. Large numbers of miners, who, under the influence of the late unhealthy excitement, had wandered into distant regions to better their fortunes, are now returning, satisfied to sit down once more at their old quertors, and let well enough alone. The consequence is, renewed activity in many localities but recently almost deserted. The dryness of the season, although operating very much to the disadvantage of the placer miners and ranchmen, is nevertheless opening up the river beds to a more thorough and ready working than they have ever before received. The same cause is also materially aiding in the development of quartz mines, not only in pushing forward the old lends, but in the discovering of new ones. Never, in the known history of the country, have the California rivers been so low as they are the present season, or offered such facilities for a thorough exploration of their beds. As an indication of the extremely low stage of the springs and water courses, it is stated that there is less water in the Sacramento river than was ever before known, and navigation above Sacramento is difficult in the extreme; indeed, so low is the water that navigation to Marysville will have to be suspended at an early day, and the town of Eliza once more made the head of navigation.

THE CHLORINE PROCESS.—The Rocky Mountain *News* appears to think that in a recent article we doubted the success of the chlorine process as proposed to be introduced at Pike's Peak, by Messrs. Keith & Co. Not at all. Accepting the conditions premised by Messrs. Keith & Co., we fully believe not only in the success of the process there, but freely admit that it is the very best, and only thorough process by which the precious metals can be extracted from the sulphuret ores of the Colorado. Our doubts were clearly expressed as applicable only to such ores as contained but a small percentage of sulphurets, or where the materials for manufacturing the gas were only to be had at a great cost. We expect and shall be happy to hear of the most complete success of the chlorine process at Pike's Peak.

WONDERS OF CREATION.—The microscope, among many other useful things has revealed the fact that the atmosphere which is charged with marsh miasms, in almost all low lands, abounds with a living microscopical insect, so small that it requires a pile of 13,000 of them to form a speck large enough to be seen by the naked eye! It is supposed that fever and ague, and other diseases peculiar to such localities are attributable to the inhalation of these insects into the lungs and their passage thence into the blood of the human system. They are supposed to be reproductive in the blood, and hence the long continued and remote effects, noticeable from a long residence in such exposure. These insects are perfect in form, and much resemble those abounding in fermentative poisons, such as the virus of rabies, and the virus derived from dead bodies, etc. In some cases, as in those last mentioned, these infinitessimals reproduce themselves with great activity, operating upon the mass with which they are mixed, much like yeast in flour, where a very small quantity impregnates the whole mass. The microscope furthermore reveals the fact that yeast itself is but a forest of minute vegetation, which grows, blossoms goes to seed and reproduces in a space of time measured by moments only. And more than this, it is believed that these microscopic forests are actually enlivened during the same time by minute animalculæ—animals proportioned to the forests in which they roam! There appears to be no more limit to the revelations of the microscope, in the minutiæ of creation, than there is to the grander developments of the telescope as, with the growing perfection in its manufacture, we continue to penetrate further and further into the illimitable bounds of celestial space.

THE HOSSEFROSS MONUMENT.—The contract for getting out the marble for the Hesefross monument has been given to the California (Indian Diggings) Marble Company. This monument is to be 22 feet high, and judging from the drawing before us, will be most beautiful in form and proportions. The base will be of granite; the plinth will be 5 feet, 6 inches square, by 13½ thick; the die, 3 feet high, by 4 feet, 9 inches square; the base 4 feet square, by 1 foot, 9 inches high. The shaft will be 14 feet, 9 inches high and 2 feet 9 inches square at the base, by 1 foot, 7 inches at the apex. The front of the shaft will be ornamented with a pair of inverted speaking trumpets, crossed, and encircled by a wreath. The name of the deceased with a proper inscription will be cut in the die.

THE CHRISTIAN COMMISSION* FAIR.—The managers of the Ladies' Christian Commission Fair have decided to hold their Fair entirely separate from that of the Mechanics' Institute. It will be held in Union Hall, on Howard street, and will probably commence about the 26th inst. It is to be hoped that each fair will receive its legitimate patronage, and do well. Both are certainly deserving of the fullest success.

GEOLOGICAL SPECULATIONS.—Prof. Agassiz in the *Atlantic Monthly*, comes to the conclusion that the continent of North America was at one time covered with ice a mile in thickness. The proof is, that the slopes of the Alleghany range of mountains, are glacier worn to the very top, except a few points which were above the level of the icy mass. Mount Washington, for instance, is over six thousand feet high, and the rough unpolished surface of its summit, covered with loose fragments, just below the level of which glacier marks come to an end, tell us that it lifted its head alone above the waste of ice and snow. In this region, then, the thickness cannot have been much less than six thousand feet, and this in keeping with the same kind of evidence in other parts of the country; for wherever the mountains are much less than six thousand feet high, the ice seems to have passed directly over them, while the few peaks rising to that hight are left untouched. The glacier, he argues, was God's great plow, and when the ice vanished from the face of the land, it left it prepared for the hand of the husbandman. The hard surface of the rocks was ground to powder, the elements of the soil were mingled in fair proportions, granite was carried into the lime regions, lime was mingled with the more arid and unproductive granite districts, and a soil was prepared fit for the agricultural uses of man. Evidences are all over the polar regions to show that once the heat of the tropics extended all over the globe. The ice period is supposed to be long subsequent to this, and next to last before the advent of man.

THE PAVILION AND FAIR.—The Pavilion is nearly completed. The magnificent dome has been raised to its proper position; the walls of the main building are all up, and the wide area of floor nearly finished. Workmen are now engaged in the finishing work of the front, making doors, clearing up rubbish, etc., etc. The building will soon be ready for the reception of goods for exhibition.

The managers of the Fair desire it to be distinctly understood that articles for exhibition are received from all persons alike, and that none are excluded from competition for premiums. The State Agricultural Society gives no premiums save to members; in the Industrial Fair no such distinction is made. The Fair is not exclusively mechanical. A large department is set aside for agricultural articles. Fruit, wine, grain and garden vegetables are as acceptable as steam engines or amalgamating pans. Considerable quantities of fine fruit are expected from the Sacramento Valley and the mountains. There is to be no State Fair this year, and San Francisco is undoubtedly the best place for exhibiting any article in the State this year. The concurrence of the Fair of the Christian Commission with the Industrial Fair will no doubt attract an unprecedented number of strangers to the city.

By reference to our advertising columns it will be seen that notice is given that the Executive Committee will be prepared at the Pavilion to receive goods intended for exhibition, on the 22d inst., and that none will be admitted after the 31st.

New Theory of a Limitless Atmosphere.

Descartes advanced the theory that matter was limitless, and that the earth whirled round centers of attraction which formed more or less complex systems. Newton overthrew this theory by his theory of gravitation, and denying that matter was limitless, he contended that space was filled with a sort of ether, which was a sort of non-resistant something, but was not quite a vacuum. Dr. Hoefer has recently advanced a new theory upon this subject. I quote his own words: "Those persons who have studied the figure of the earth contemplated only its tangible mass; although air is as much matter as water and solid substances. What is the termination, the shore of this immense ocean, whose crustmeen we are? No one knows. All that we know is there are in it veriable, regular and irregular currents and tides, too, just as are in the ocean where aquatic animals live. According to all probabilities the whole atmosphere is contained in the luminous disc under which our earth appears to him who sees it from the moon. As the earth is surrounded by a gaseous ocean which holds in dissolution or in suspension all substances, (solids and liquids) which can be transformed into vapor with which it is in contact, so, too, this ocean is surrounded by another atmosphere which is in turn formed of more subtle elements than all the subjacent strata. There is no good reason to forbid us from conceiving this second atmosphere, to be surrounded by a third atmosphere, and a fourth atmosphere, etc. This hypothesis enables us to re-establish naturally the continuity of matter and of motion, without the intervention of that *deus ex machina* which we call ether. In this way we place in communication all the atoms (planets, satellites, etc.) and we place them in communication not only with each other, but with the central atom of our *atom world*, which itself is only the infinitesimal part of a compound called the nebulous compound of the universe. We now reach the vital portion of the egg. When natural philosophers shall comprehend the true form of our planetary atom in the midst of the oscillations of its concomitant atoms and of all the joint atoms (the compound atoms) of the universe, then embryologists will have placed their finger upon the initial point of life. But this result will not have been reached even by A. D. 3000 notwithstanding all the exertions of that powerful and magnificent lover of the human intellect—transcendental mathematics."

You see that these ideas have some analogy with the theory of vortices; but there is this important difference between them: Descartes placed at the edge or end of each system the densest matter, while Dr. Hoefer, on the contrary, places the most volatile matter there. Dr. Hoefer's hypothesis finds favor here. He is a learned German who has for years been established here. He is the author of a dictionary of chemistry and botany, and is the author of the biographical dictionary which is now in course of publication by Firmin Didot & Co.

CHRISTIAN COMMISSION FAIR IN SACRAMENTO.—The ladies of Sacramento are making active preparations for a Fair which they propose to hold in that city, probably immediately after that to be held in this city. The precise day is not yet fixed upon. The ladies of Placer and El Dorado counties and probably other adjoining counties will unite with Sacramento in the effort. Success to all such benevolent enterprises. If war and suffering must exist let us do all in our power to ameliorate their terrible severities.

It is said that during the day's battle on the Chickahominy, Grant lost 6,000 men in ten minutes.

Orsgon—Letter to Professor Whitney.

We have besn permitted to copy a letter of Mr. Wm. M. Gabb, assistant geologist of this State, to Prof. J. D. Whitney, from which it nppears that onr sister State has some very rich quartz vsins. We trust that Oregon will ere long take some steps towards securing a geological survsy. Such a work wonld do much toward devsloping the resources of that Stats. Mr. Gabb has gone north with a detachment of U. S. troops, under Col. Drew, to ths Owyhes rivsr, in tho eastern boundnry of Oregon. His letter is dated at Jncksonville, Juue 1st, 1864, and reads as follows:—

Dear Professor:—I have just rctnrned from a visit to a quartz claim on Applegate creek, southwest of this place. It is called the Fowler or Steamhoat ledge, and has bsen worked for the last three or four years.

Tho vein consists of one or two principnl portions running in a general pnrallel direction with nnmerous small *strings* and feeders. These are all evidently pnrts of ths same systsm and seem to have their origin from ths same sonrce. Ths general strike is, as might be expected, a little north of N. W. and S. E., and the dip is ndarly nniform throughout. I felt a particnlar cnriosity to see it, from the fnct that I was told that the vein dipped to both sides of the hill; that there was a slide, together with a lot of other nonsense. The origin of the idsa was ths ontcrop winds aronnd the end of the hill, so thnt it is higher in the end than in the sides. A plain snrface cnt through the hill wonld hs nearly parallel with every string of qnartz I saw in any of the tnnnels or on the ontcrop.

The qnartz is pockety. Soms of it bsing said to have paid as high as $2,500 per ton, and most, if not all, having paid working expenses. Upwards of a hnndred thousand dollars is said to have bsen taken out since ths opening of ths claim.

Ths claim is not being worked at present on account of some litigntion, a party having jumped a portion of it, and ars now boldiug it on some lsgal qnibble, despite the self evident fact that they are within the limits of the original location, and undouhtsdly on the ontcrop of the principal vein.

There are other qnartz veins in the vicinity, bnt I havs not yet had time to visit them. Some are reported to be very rich, bnt most of them are like the usual rnn—pay a emall profit and are vsry nncertain.

Very Truly.
Wm. M. Gabb.

Prof. J. D. Whitney,
Stats Geologist, California.

A Miners' Strike in Esmeralda.—Ths miners of Esmeralda had a big strike on Snnday last, in consequnce of a threatsnsd redncsion of their wages. They marched in procession some two or thres hnndred strong throngh the streets of Anrora, and afterwards formed a lsagne for mntnal protection. The Strike originated among the hands of ths Real del Monte, in consequnce of a notics given them on the 30th nlt. that their wagss would be rednced to $3.50 on and aftsr Angust 1st. All hands have since gons to work at old prisss of $4 psr day.

The Association or leagns have adopted a constitntion and cods of by-laws which among othsr things rsqnirs that evsry psrson npon becoming a member of ths Association shall pay to the Secrstary the snm of twenty-five cents and the snm of fifty csnts psr month thereaftsr. Whenever a member of the Association becomes disabled or sick it is made the duty of his fellow miners to provide and care for him; any member of ths Association knowing of a fellow member bsing sick or destitnts is required to report the same to the Executive Committee. An organization of this kind cannot fail of being beneficial, if properly kspt np. Let the miners stand hy one another and maintain thcir orgnnization and then thcre will be but little destitution and suffering among them.

Professor Mayer, of the Maryland College of Pharmacy, says that the common red pottery, which is thickly glazsd with red lead, is not fit to contain anything that is to bs used as food. He states that a citizen of Baltimore county recently lost two children who were poisoned by eating apple butter that had been kept in a glazed milkpot.

The postal service for California costs about $350,000 per annum, and it yields a revenue of some $280,000. Loss to the Government, say $70,000 a year.

The British Columbia Mines.—Tbe Victoria papers are filled with accounts of important gold discoveries at the forks of the Leach and Sooke rivers, a little over twenty miles from that city. A *Chronicle* extra says a chunk of gold worth $70 was fonnd by a colored mau two miles above the mouth of Leacb river, and the company of colored people were tnking out $1 to the pan. Another person obtained three ounces in eight hours' work. The *Express* says that such a whirl of excitement had never been seen in Victoria, sverybody having turned miner. Another company located a claim on a bar about three hundred feet long, on the north branch of Leach rivsr, wherc they obtnined forty cents to the pan. One of the explorers spcaks of these diggings as follows: Ths countrv bas the appearnnce of n rich gold district, and the slate formation, intermixed with smnll veins of quartz, extends several hundred feet. Several parties are taking out as high as $6 to the pan, and some eveu higher.

It appears that everyhody that can get off for the mines is going. Carpenters and other mechanics nrs stopping work preparatory to a general stampede. Two blacksmith shops havs closed, the fonndries ars ahout to close, and even the printers nre leaving their cases.

From Lilloost the accounts are also exciting, and the "biggest strikes ever madc" are reported. Seven hundred men had gone there. Reports of grsat snccess coms from Williams' Creek. The *Chronicle* says:

"The Aurora Company is now par excellence the company of the creek. Their dividend this week has been over $570 per share, the amount of gross yield during the week is 1500 ounces, or $24,000. Private letters in confirmation of ths above statemeut say that Sunday's washing yielded 473 ounces."

Very great excitement has been cnnsed nt Williams' Creek by the reported discovery of rich diggings, supposed to be in ths neighhorhood of Cariboo Lake. Men to the number of five thousand are out in every direction, eagerly searching for them.

The Sooke and Leach river diggings nrs twenty-two miles from Victorin, by the way of Longford's lake. A trail is being cnt to them. There is probably bnt little doubt abont there being many rich clnims in the regions above referred to; and there is qnite as little doubt that the conntry is more thnn filled with a reasonable number of adventurers ers tbis. California miners, as a general thing, have rnn off npon too mnny wild goose chases in that direction, to he very easily cnrried away by another at the pressnt time. We presume our people will read the above without getting very particularly excited over it.

A Monster Blast.—A monster blast of gun powder was fired at the Ardsheal, (Scotland), granite quarry, some two months since. The charge consisted of about two tons of powder, and was deposited in one chamber. The shaft was forty thres feet in depth, and ths chamber in which ths powder was placed about twenty-five feet long. Ths charge when ignited, lifted an immense mnss of rock, compnted to havs bsen 30,000 tons and npwards in weight. The flams belched ont in a semi-circle on the seaward sido. Not a single fragment of a rock was seen to riss in the air, nor to be ssnt across ths main road near hy, and no damage was done to ths honses sitnated within a fsw yards of the explosion. The explosion was witnessed by a great numher of spectators, who wers posted at various points from which it was thought the sams could be witnessed with safety. The report was not loud, bnt deep and hoarss. At Duror, a distance of fonr miles, the gronnd was felt strongly agitatsd as by an earthqnaks.

Killed.—Mary E. Parker, sixteen years of age, danghtsr of Mrs. Helen Parker of San Francisco, was caught by ths machinery in a mill at Green Valley, in Sonoma county, last Friday and instantly killcd.

Both the California and Pacific Companies, snys the Nevada *Gazette*, are now carrying passengers from that place to Virginia for twelve dollars. No reduction has been made on ths fars between Nevada and Sacramento.

The Dntch have a proverb that "when the French are asleep, the devil rocks the cradle." They are quiet for the present, but what devil is rocking the cradle future events must show.

Divers are at work at Martha's Vinoyard, rscovering large amounts of property from wrecked vessels.

Economic Treatmsnt of Poor Copper Ores.

The importance of a process by which the enormous qnantities of pnor copper ores nnnually hroken could he utillized is so gsnerally admitted that interest naturally attaches to every invention bearing on the subject. Mr. John Thomns, of Battersea, claims that he can profitahly treat cnpper ores containing only one per cent. of metal, and that ths result is equally satisfactory whether the ors be a sulphide, carhonate or oxide. The chief object of Mr. Thomas' invention is to prepare copper ores and carbouize them, that they may bs smelted in a blast furnace, though other reducing furnaces may be employed, whereby hs obtains a large percentage of fine copper from n given qnantity of ore, and that by fswer processes or manipulations than heretofore. The ores are calcined, and washed in any ordinary mnnner, and he then treats them thus: To three parts, more or less, of the calcined ore, or mass, he adds one part of clay or nrgillaceons earth, and about one part of lime, and mixes this compound with carbonaceous matter, the qnantity of which will depend on the nature of the ore; he then forms the mass into bricks or lumps; when dry he burns the bricks or lumps in n clamp or kiln, such as is used in hrick-making, or in a kiln similar to a cement klin or lime-klin, or he burns them in any other mannor that will most effectually bring them into clinkers. In this state ths ores are ready for smelting, aud he prefers to employ for that purpose a blast-furnace, though any furnace commonly used for smelting copper may be used. If desired the first operation of calcining may be dispensed with, aud ths ores may be mixed and mads into lumps or bricks at once, hut there wonld be a greater qnantity of matcrial to make up, without an increase of prodnce. When ths lnmps or bricks are to be burned in a kiln similar to a lime or cement-kiln, the carbonaceons mattsr may be dispensed with; and instead of mixing the lime with the ores or earths and clay, the lime or any finx may be afterwnrds added in the reducing furnace, and then ths proportion of clay would have to be increased.

Now, as it is probable that for every ton of marketable copper ore raised there are at least ten tons which, although containing copper that in less favored countries would be carefully extracted, are thrown nside as worthless, and there can hs no donbt that, if it were the custom of the country to treat this ore, the profits of our dividend mines would be still greater than at present, and many that do not now pay cost would return fnir profits. Mr. Thomns is a practical iron founder, nnd has proved, by actual results ohtnined, that the smelting of copper may bs advantageously assimilated to the smelting of iron ore, and that the smelting of copper yielded not more than one per cent. by his improved process, be as profitably carried on as the smelting of thirty or thirty-five per cent. under the most favorahls circumstances. Although we havs not yet seen the actnnl operation upon the ors, ws mny stnte that the resulting product from ordinary pyrites, contnining only an extremely small percentage of copper, to he excellent. We nnderstand that Mr. Thomas is seeking co-operation for the development of the invention, and has the utmost possible confidence in the economy and practicability of the process; so that ers long the profitable treatment of much of the poor copper ors, now a positive inconvenisnce to the miners, may be reasonably looked forward to.—*London Mining Journal.*

New Incorporation.—The certificate of incorporation of the "California Marble Company" was filsd, Monday, in the Connty Clerk's office. The object of the Company is to work tbs "Indian Diggings Marhle Quarry," situated at Indian Diggings, El Dorado county, California. The company will have a capital stock of seventy-five thousand dollars, dividcd into seven hundred and fifty shares of one hundred dollars each. The term of existence is fifty yenrs, nnd plncs of business San Francisco.

Pretty Good for a Deserted Place.—We have taken some little trouble to collect statistics of the amonnt of gold shipped from this place weekly, and the result is, at least, satisfactory to ns. We find our lowest estimate will reach 300 ponnds weekly, or 1,300 pounds per month. So much of the precions metal going from our locality, would seem to entitle ns to a place on the map of the Territory, and also indicate that we are not entirely "played ont." Wonder if they have yet heard of ns in California.—*Lewiston (Idaho) Golden Age.*

A gentleman from Virginia City, informs ths Sacramento *Bee*, that the next election will show a voting population in Storey connty (in which Virginia is situated) one thonsand less than there was at the election last Jannary. The total vots then was 4,130.

It is estimated that there are four thonsand persons in Virginia City out of employment who would be glad to go to work if it could be had.

High Prices—The True Cause.

It is quite the custom, just now, to nttribnte the present high prices to an expanded curreucy. We nre flippantly told that this is the one canse of commercinl derangement, and that if cnrrency were only reduced to the standard of three years ago, prices would come down in the same proportion. Let us think a moment, and we shall see the utter nbsnrdity of snch a conclusion. No matter what is ths medinm for making exchanges, or what is currency, or what is lawful money—whether it hs gold or bnnk notes, or treasury notes—war prices nlways were and must he high prices. Europe learned it during her Napoleonic wars; we nlso learned it in the war of 1812, and the same stern teacher compels us to submit to it now. The reason is clear and simple. Prodnction is diminished, and, by the waste of war, cousumption is increased. The war draws the farmers' sons from the plow, and fewer acres are sown, nnd smaller harvests are reaped. The mechanic arts suffer in the same proportion. Scarcely less than two-fifths of our adnlt male population are now devoting all their time and energy to putting down this rebellion. Of these, a vast nnmber ars in the field with our brave generals, a lnrge part man our ships of war, now connted hy hundreds, and many ars in the hnspitals; while thoss employed in the navy yards, iron foundries, machins shops, and in the manufactnre of military clothing nnd equipments, and in producing munitions and supplics swell the aggregate to the limit ws have named. This great clnss of prodncers cnnnot be withdrawn from their ordinnry pursnits without a great diminntion in the products of the country. When ths supply is greatly diminishcd, and ths demand not only continned hut increased, prices must advancs. There is no possible help for it. If we could return to n specie hasis to-morrow, it would still be a wnr basis, at war prices.

There is but ons exception to this ndvance in prices, and that is the Government bonds, nnd tbey are no exception to the rule, nnd only follow the genernl law of snpply and demand. The necessities of war have mnde them abnndnnt and cheap; but when the war cnds the supply will ceass and they will bs dsar, and the mnn who invests in them now is sure of a liberal profit.

A reduction of ths currency will he well, and we havs the official assurnnce of the Secretary of the Treasury that it is now taking plnce, but it is not the infallnble panacea for financial disorder that many supposs. Mr. Cisco, the Assistnnt Trensnrer of the the Unitcd States at New York, states that hs hns canceled $41,000,000 of interest bearing legal tenders within two wseks, and that he now holds $30,000,000 of greenbacks—nnd yet brend and bntter, whent and corn nnd cloth are no cheaper.

The first canse of the incrensed cost of all commodities, gold included, is altogether ontsids of the currency. A redundant, currency increases the misfortnne, but does not crente it. Suppose the Government does contract the cnrrency, what is to prevent the State hnnks, that give no security for circulation, from quadrnpling their pnper issues, ns they have already done in many parts of the country? What then can bs more absnrd than to make Governmsnt or ths Treasury Department the scape goat for evils that are simply consequent upon the most gigantic war the world ever knew? If ths body hns a fever, is it jnst to make the hand that snpplies its wants responsible for its nnnnturnl condition?

Freezino to Death.—That to be frozen to death mnst be frightful tortnre, many would consider certain, from their own experience of the effects of cold. But here ws fall into the usual error of supposing that ths suffering will increase with the energy of the agent, which could only he the cass if sensibility remained the same. Intense cold brings on speedy sleep, which fascinates the senses and fairly beguiles men ont of their lives. The most curious example of the seductive powers of cold is to be found in ths adventnres of the hotanical party, who, in Cook's first voyage, were caught in a snow storm on Terra del Fuego. Dr. Solander, by hirth a Swede, and acqnainted with the destrnctive deceits of a rigorous climate, admonished the company, in defiance of lassitude, to keep moving on. "Whoever sits down," said he, "will sleep; and whoever sleeps will perish." The doctor spoke as a sage, hut he felt as a man. In spite of the remonstrances of those whom he had instrncted nnd alarmed, he was the first to lis down and die. The same warning was repeatsd a thousand times in the French retreat from Moscow. Alison, the historian, to try the experiment, sat down in his garden at night when the thermometer had fallen four degrees below zero; and so quickly did the drowsiness come stealing on, that he wondered how a soul of Napoleon's nnhappy band had heen able to resist the treacherous influence.

The *Visalia Della* urges the sinking of artesian wells in Tnlare county, for the purpose of irrigation.

Gravity and Force.—Mechanical Polarity.

The following extracts are from an interesting paper read by Mr. Chase, before the Franklin Institute, of Philadelphia, April 21st, 1864. We copy from the "Journal of the Franklin Institute."—

On account of the mutual dependence of all the forces of nature, and the reasonableness of Prof Faraday's conjecture, that they are often, if not always, convertible more or less into each other, it seems probable that the disturbances of the magnetic needle may be as closely connected with the earth's rotation, and the continually changing position of each point relative to the sun, as those of the barometer and thermometer. Ampere held that the earth is an electro-magnet magnetized by an electric current from east to west, the current being excited by the action of the sun's heat successively on different parts of the earth's surface as it revolves toward the east. The friction of trade-winds and ocean-currents and the variations of light and temperature that are produced by rotation and orbital revolution, must exert an influence upon the magnetic needle, and besides these indirect effects, M. Arago showed that simple rotation, in some unknown way, produces magnetism in bodies of every description. Many have supposed that this magnetism is derived from the earth by induction, but on account of the impossibility of escaping from the influence of terrestrial magnetism, it is difficult to obtain any conclusive evidence of the subject. * * *

The great forces of nature can be measured only by their disturbances or their derivations from uniformity. The action of gravity is so nearly uniform at all times and in all parts of the globe, that it is difficult to imagine any crucial experiment that could demonstrate its relations to magnetism. Perhaps a needle, hinged at its point of support, with the two extremities nicely balanced, might help us towards such a demonstration, if careful experiments were tried, to show the relative influence of gravity upon each extremity, both before and after magnetizing, and when subjected to artificial magnetism, so as to produce various amounts of deviation from the normal dip and declination. Or, centrifugal force, so applied as alternately to assist and oppose the effects of gravity, as in large fly-wheels revolving with various degrees of rapidity, may indicate variations of magnetic influence, that can be explained only by the conversion of gravity into magnetism or the reverse.

Prof. Faraday, in a lecture before the Royal Institute in the year 1857, endeavored to show that our usual conception of gravity is not in harmony with the principle of "conservation of force." Prof. Brucke and others, have tried to remove the difficulties in which the question is involved, but I believe none of the proposed solutions have been satisfactory to the learned philosopher who first started the discussion.

It has even been a question whether gravity can be properly called a force, or whether it is anything more than a simple "tendency." Prof. Bracke has shown conclusively, that it is subject, like heat and other recognised forces, to all the laws which regulate the interchange of *actual* and *potential* energy, and our barometrical investigations furnish a beautiful illustration of the manner in which its tension is balanced by opposing forces.

We speak, indeed, of weight, as if it could be predicted only of bodies at rest, and as if it were so entirely distinct from momentum that no comparison could be properly instituted between the two. Precisely the reverse is true. Absolute rest is apparently an impossible condition of matter, for, to whatever extent the action of opposing forces may be relatively neutralized, the inconceivable rapidity of ætherial, planetary, and stellar motions, produces a constant change of place. * * *

Gravity, with the same propriety as heat, may be considered as a "mode of motion," whether acting merely as "dead weight," or as an accelerating or a deflecting force. If it can be shown that magnetism also originates in motion, we may be able to demonstrate the mutual convertibility that Faraday suspected.

The earliest hypothesis with regard to terrestrial magnetism looked for its cause to a powerful magnet, lying nearly in the line of the earth's axis. Subsequent discoveries led to a modification of this view by the supposition of another magnet, pointing towards the Siberian pole. Mr. Barlow's idea, that the magnetism is superficial and induced, has now been generally adopted, and if it could be shown that solar or rotary action is capable of developing magnetism in particles such as those which are known to constitute our globe, the great difficulty in the way of a satisfactory explanation would be removed. Ampere's, Barlow's, and Christie's experiments showed that simple rotation is sufficient to affect the magnetism of a compass-needle,* and in the oxygen of the atmosphere, which, as Faraday discovered, has a specific magnetism, variously estimated at from one in 882 parts to one in 287 parts of that of iron, we have a medium through which any induced magnetism may be distributed over the entire surface of the earth. Some simple experiments that can be easily repeated, seem to confirm Ampère's views, and to indicate the manner in which the circulating electric current is excited.

There is a species of mechanical polarity, of which I have never seen any notice, that is apparently produced by motions resembling those to which the air is continually subjected. It may be exhibited in the following ways:

1. In the middle of a basin of water, lay a long strip of any substance (floating it by corks or otherwise, if it is heavier than water.) After the water has become still, lift the basin carefully by one hand, and hold it at arm's length. The intermitting muscular action produces longitudinal vibrations, which tend to bring the floating strip into a line with the outstretched arm, and the tendency may be increased by moving the basin gently up and down.

2. Hold the gimbals of a binnacle compass so that it can swing only in one direction, and cause it to move like a pendulum in that direction. The needle will tend towards the line of oscillation. Vessels may have been lost from ignorance of this fact, for it is not unusual for compass pivots to become so worn that the needle moves sluggishly, and in order to start it, the compass box is shaken. If one of the gimbal hinges should be rusty, the shaking would bring the needle into a line perpendicular to the axis of the free gimbal, and the captain might easily suppose that he was sailing north, when his course was due east or west.

3. Take an ordinary pocket compass, grasp it firmly between the thumb and end finger of one hand, and move it quickly up and down through a small arc. The needle, as in the last instance, will tend towards the plane of motion. This experiment may be variously modified, according to the length and directive energy of the needle, the steadiness of the operator's nerves, &c. Sometimes a simple grasp, with a powerful muscular contraction, will bring the needle into line, without any other vibration than that which arises from the irresistible nervous tremor. Sometimes the momentum acquired by each pole in its approach to the operator, carries it forward so as to bring the other pole under the wave-influence, and the needle is thus made to rotate so rapidly as to become nearly invisible.

The polarity in each of the three cases here enumerated, is easily explained upon purely mechanical principles, but there are some indications that seem to show a close connection between the mechanical vibrations and those of nervous electricity. There appears to be a great difference in the control of different individuals over the needle. Some can bring it into line at once, with scarcely any perceptible motion, while others are obliged to use considerable effort; the needle does not seem at all times equally susceptible; it often appears more easy to produce rotation in one direction, that in the other. There may, therefore, be a natural connection between these experiments and those of M. Du Bois Raymond, who attached two strips of platinum to a very delicate galvanometer, and caused them to dip into two cups of salt water. Dipping the fingers of each hand into the cups, and alternately bracing the muscles of each arm, he produced a perceptible deflection of the needle. MM. Becquerel and Despretz repeated the experiment without obtaining very satisfactory results, but M. Humboldt was more successful. Add to these phenomena the well-known evidences of a constant current, circulating around magnets, and if we suppose that electricity consists simply of vibrations, it will seem perfectly natural that the magnet should obey the strongest vibrations.

*The effect of rotation on the magnetic needle may be shown in a rough way by causing an ordinary grindstone to revolve rapidly, and bringing a compass near its edge.

The Dalles (Oregon) *Mountaineer* gives an account of an attempted ascent of Mount Hood, by a party of four gentlemen from that place. Three of them gave out within three hundred feet of the top, but the fourth, Edward Ayers, persevered, and succeeded in reaching the topmost pinnacle, which he represents as a hare, ragged crag, only large enough to stand upon. A crater was found about three thousand feet from the top, from which a sulphurous smoke ascended. The ascent was made on the 17th of July. This mountain, the highest in North America, is one of the Cascade range, and is about seventy miles east of Oregon City. Bierstadt, the eminent artist, who visited this coast last summer, is at present engaged upon a magnificent picture of Mount Hood.

A party of Mexicans have found a quartz vein about eight miles above Hite's Cove, Mariposa county, which is said to be the richest thing yet discovered in that county.

Reminiscences of the Plains—The Sand Hills of the Platte.

We shall never forget the Platte river sand-hills on the east side of the Rocky Mountains. No one who has crossed the Plains has ever failed to see them, and whoever has seen them once will never forget them. They are the most magnificent sight presented on the whole journey from the Atlantic States to California. They seem at times, as you approach them at a distance, like fairy-built cities dropped from the heavens into the broad illimitable expanse of the plains beneath. They look again like the white monuments of an immense graveyard, in which might repose the buried generations of a former age. Here and there one stands isolated from the rest, like "Chimney Rock," or the "Court House," all the more striking for its loneliness. They assume different shapes from different points of observation. Now they look like a mighty temple of the olden time—columned, arched and fretted, as if by a mighty architect. Again they bear the appearance of a stern old fortress, frowning on the plains below, and built to be impregnable. Again, you see a counterpart of the Chinese Wall, hemming in a vast extent of country, and presenting what would indeed be an impassable barrier to marching hosts. Here and there arises, vast, rugged and sublime, a tower that looks like the unfinished Babel on the Plains of Sbinar. The illusion is most complete, and for miles upon miles it continues, ever varying and ever beautiful.

This variety of forms, so attractive and suggestive, is produced by the action of the rains and storms, which are known to be most violent and terrific in that region. Nature, in her wild and angry moods, is the architect who builds those mysterious cities and wonderful temples, towers and battlements. In the storm and not the sunshine, she hews out her majestic forms and figures from the pliant hills. "In thunder, lightning and in rain" she does her work, and the Storm King slumbers in the palaces she builds, or wreaths his lightnings, like fiery serpents, around their trembling columns. She destroys, too, as she builds. When the rains come and the floods descend, many a castle that she has built stands not, for it is founded upon the sand—nay, is of the sand itself. She struck the shaft of "Chimney Rock" (upon which she had worked years upon years, like a patient sculptor, to finish), with a bolt of lightning, and the half of it fell from the heaven which it courted, and crumbled into dust at the base. Great must have been the fall thereof, for it was a majestic column—majestic even in its ruin. She is now doing her best to tear down her "Court House," and her grand building, in imitation of the Federal Capitol at Washington. After awhile she may level them, but they are of pretty solid sandstone, and it will take her as long to tear them down as it did to build them up, though she can and does deface them horribly.

All over the more prominent of the grand memorials of the action of the elements—these landmarks of geological history—the emigrants to California have inscribed their names, from 1848 down to the present time. Among them are a few that are known to fame. The possessors of many of them now lie mouldering in the mountains of California, or are sleeping their last sleep in her green and smiling valleys. The possessors of others are back in their old homes, on the shores of the great Atlantic, or the borders of the Western prairies, thinking, it may be, at this moment, of the Sand Hills of the Platte far away, and their names written on the white and barren rocks. The emigrant reads them, and the wild Indian wonders what may be the meaning of the inscription, imagining, perhaps, some mysterious connection with his own sad destiny. The possessors of others again, we know, are living in peace and plenty in their new built homes on the Pacific. And strange have been the adventures of all those wanderers, and full of interest are their memories of the past.

There are now on the way from New York to this city 500 barrels of rye flour, and of cornmeal 829 hogsheads, 395 puncheons, 3,585 barrels and 450 packages. These articles are imported for horse feed by the street railroad men.—*Exchange.*

What enormous eaters these railroad horses must be, to require that upwards of 10,000 barrels of feed in addition to their usual supply of hay, should be on its way to this port, and all about at one time.

Raising.—The New York city newspapers were to advance their prices on the first of August to a five cent standard.

THE DECAY OF VITAL POWER.

"Burleigh," of the Boston *Journal*, gives the following graphic sketch of several well known characters:—

Men will grow old—some by age, some by care, some by premature decay brought on by exposure, toil or dissipation. Man can live fast, financially and physically; in either case bankruptcy comes. I saw a crowd on the steps of the Astor recently. They were watching the attempt of the great pugilist, Tom Hyer, to ascend into the house. His tall form was beat by disease; his once firm step tottered; his immense strength had departed. With crutches and the aid of the strong arm of a friend, he slowly, and with anguish, took one step at a time as would an infant to go up. It was gall and bitterness to him to cast his eyes around that crowd, and see how unlike their greeting was to the crowd that cheered him on his great fight with Sullivan. By a singular coincidence Morrissey came along. But how unlike Hyer. Morrissey is a professed gambler. It is his trade. He has taken care of himself and keeps within bounds. He is temperate, for his calling demands it. He dresses in elegant taste—is full jeweled—and would pass for a well to do banker with the upper ten; or as a professor in a college. Morrissey has taken Saratoga under his special charge, and intends to drive this year a larger business than he did the last. He has taken his headquarters already, and with an elegant exterior, smart address, cool and adroit habits, he will allure into his embrace many of our youth, and send the curse into many homes in the form of ruined but once manly sons. As Hyer was attempting to go up the steps, a man sought a more quiet entrance on one side of the crowd. It was N. P. Willis. "Time has laid his hand visibly upon you, my gay friend," I said to myself. He also needed the aid of a cane to help him up. The lithe and smart step faltered in its upward motion. The auburn locks, still curly, were grizzled, his face was thin and heard gray, as one in the sere and yellow leaf of life. Few would have recognized in the feeble and slender invalid, the nervous bilarous man of twenty years ago. He cast a sad look upon the crowd, and the pugilist broken down in middle life, and passed on. The group was not complete. Passing along the pavement was Commodore Vanderbilt. Till recently he has been among our most vigorous men. Age seemed to have no effect upon him. His body was iron, his nerves steel. Old in years, his step was elastic. His hair was white as snow, but his intellect sharp and vigorous. His form slim as a youth of nineteen, but erect as a Mohawk warrior. Some months ago he was thrown from a wagon, and that fall did the work of years on his system. He walks and looks the old man; his step is languid, and that touch which none can parry and all must obey, is upon him. Such is life.

Times' Varied Pace.—There are few things more strange than the different pace with which, in different minds and hearts, time seems to tread his onward course. To the little child, a year appears almost endless; to the full-grown man, it seems in memory but a few days, and those so confused with the days that had preceded them, that he can with difficulty disentangle, and fix the limits in his thoughts of any single period. When he attempts to review a year, and assign to it the events which marked its progress, he will probably reckon amongst them the occurrences of some previous year, perhaps far from that he is now contemplating, but which, with its companions, has sunk into the boundless abyss of the past. To the sorrowful, times' harque seems to be becalmed, and the slow stagnant current on which it floats seems scarcely able to move onwards. They wake in the morning, to find themselves only where they fell asleep at night, the same sad scene around, the same dreary desert before, while to the gay and light-hearted the voyage is all too rapid—they would fain linger and revel in the sunshine which irradiates a prospect so beautiful and so tempting. But no; the barque hounds on, and ere they thought their sails were set, they have been whirled from one end of the year to the other. And yet time neither hastens nor retards its pace; its course is even and silent, it flows out drop by drop from the eternal fountain.

A new workingman's organization, opposed to strikes has been formed in Boston. The principal object is the employment of an agent, who will obtain coal, groceries, etc., for the members, as cheap as possible.

Incendiarism.—The recent fires in Virginia City are thought to be the work of incendiaries, who set fire to the buildings for the sake of plunder. The citizens have offered a reward of $2,000 for evidence to convict any one of incendiarism.

George Patterson, a workman in the Marysville foundry, was severely injured a few days ago by being caught in the machinery.

Our Summary of Mining News.

CLEANED FROM VARIOUS EXCHANGES.

CALIFORNIA.

Rich Rock.—Mr. C. A. Helmering, superintendent of the Siskiyou Mining Company, Humbug District, on Saturday last, showed us, says the Yreka *Union* of July 27th, some specimens of rich rock taken from the company's tunnel. The lend is well defined and varies from eighteen inches to three feet in width. The Shasta Butte Mining Company have located on the same ledge and adjoining the Siskiyou, and the striking of such rich rock has sent the stock of both companies up several dollars to the share. It is the intention of the Siskiyou to immediately procure a mill. Humbug for rich rock is getting a good reputation. The claims already prospected indicate a good yield with proper machinery.

Gold Brick.—The Manning Company, mining in the vicinity of Placerville, El Dorado county, have sent down a sample of the proceeds of their mill in the shape of a gold brick, weighing *twenty-two pounds*, the result of the crushing of 138 tons of their ore. This is a great yield for a California gold mine. The company's works have been carried on from the yield of the lead, and, strange to say, without an assessment.

The Marysville *Appeal* has seen some fine specimens from the Courage company in Brown's Valley. The members of that company think they have a "big thing." The Paragon company, of Brown's Valley has dissolved. They offer for sale their engine and pump.

New gold mines have been found at the head of the San Joaquin, 150 miles from Mariposa. A good many prospectors are directing their course thitherward.

The Calaveras *Chronicle*, says that the Melones claim, situated on Carson Hill, in that county, is paying rich once more. Over $10,000 in gold was sent from the claim to San Francisco, last week. We notice that the stock has gone up two or three hundred per cent. during the past few days. While silver mining has nearly collapsed, gold claims still continue to pay.

From Catalina Island.—The Los Angeles *News* says it is reported that large quantities of paying ore is being taken out of the "Monster," "Gem of Ocean," "Argentine" and other lodes in the vicinity of the Isthmus. Rich discoveries continue to be made upon all parts of the Island. A new mining district has been formed which includes the south-easterly portion of the Island, under the title of "Washington Mining District." We have seen some fine samples of ore from the "Yellow Jacket," situated in the district above named, which is a well defined lode, some fifteen feet in width, of solid ore.

Comstock Still Lives.—Dr. R. B. Farnham, who left Portland lately for New York, with quartz specimens from the Boise mines, gives some interesting particulars to a paper in the first mentioned place of quartz operations in Idaho. He says:

The celebrated prospector, Comstock, is at Boise, and is crushing rock at the rate of 1,600 pounds a day, with rude arastras, run by a 20-foot overshot wheel. The following are the

Sierra County.—The Mountain *Messenger* speaks encouragingly of the condition of the mining interests in Sierra County:—

The long reach of gravel range between Eureka and Brandy City, is being prospected and is believed to be rich in mineral of the precious kind. Should this prove true, a large mining district, of sufficient capacity to employ many hundred men, would be thrown open to enterprise and speculation.

The Union company, at Mt. Pleasant, Gibsonville, struck gravel, on Monday last. It was the eighth anniversary of their first assessment, when ten shareholders started in to open the claim.

The little camp at Scales' Diggings is improving. The Sawmill company are building a dam on Rock Creek, which will, in the Spring, flow several acres with water, and become a strong reserve against the dry seasons.

With regard to the new diggings on the North fork of the Yuba, at Hancock's Ranch, says the *Messenger*, reports conflict so that we are in doubt about it. Some who have been there are confident that they will pay well; while others are just as confident that they will not. If it were about 4,000 miles from civilization, we should say, go by all means; but as there is no danger of a man's starving to death before he can get back, if the mines do not prove as rich as expected, we are prepared to give no advice. It is distance, and the difficulty of getting to them that make many new mines valuable.

The Fashion Claims, on Gold Canon, are getting in on the home stretch, and have lately tumbled out about 125 ozs. of dust weekly, with the "hed rock pitching."

Quartz.—Several shafts have been sunk on the hill opposite Chandler & Co's old mill on the Chandlerville side of the ravine, to find the ledge which crops out there; some good prospects having been found among the loose boulders in that locality.

Among the unfavorable indications the *Messenger* instances Brandy City, which is pretty well petered out in the diggings for this season, and few miners have made anything. Cole and Stevens may be mentioned as an exception, having done remarkably well. Many men have left these diggings for other parts, and others contemplate the same thing.

At Council Hill, also, extensive preparations were made, last season, but the failure of water has indefinitely postponed operations. Everett & McLelland, of Camptonville, put up a powerful iron pipe hydraulic here, last year. It is 15 or 16 inches in diameter, and about 900 feet long, with a fall of *two hundred and seventy-one feet*—undoubtedly the most powerful in the State, that of Cole & Stevens, 240 feet fall, being the next one to it, we suppose.

WASHOE.

We condense the following from the Gold Hill *News*:—

The Yolo company is sinking its shaft below the level of its tunnel. The shaft is now about 260 feet in all, and of this depth about 34 feet is below the tunnel. The hoisting is all done by a windlass at the top of the shaft, but the dirt and rock which is excavated out in sinking down, is raised only 34 feet and there swung off into a chamber connecting the tunnel with the shaft, where it is dumped into a car, and run out through the former work.

The Branch Mint company has suspended operations on its claim for the present. Its shaft is some 220 feet deep, and from it a drift has been run to the ledge, and several tons of rock have been taken out which was crushed, but did not yield sufficiently well to authorize the working of a greater quantity.

The Astor company's tunnel is the only mining work done in Crown Point Ravine, above Bowers' mill, which is not idle at present. It is being driven ahead as rapidly as ever. The boys who are running it on contract inform us that it wants but a few feet of being 600 feet long.

The Jackson company keeps at work as steadily as clock work. It has completed the road it was building from the Ophir Grade to its shaft, and has now convenient means of bringing up lumber or timber, or hauling away quartz when necessity requires.

The Fair Play is busily working in its shaft, sinking it down. It has already attained the depth of forty feet, and has been sunk nearly half that distance through hard rock. The company has a good shaft, and expects to strike shortly into a good ledge.

The Jewett has let a contract to grade a place around the top of its shaft to erect a whim. Work on the contract has already been commenced. The shaft is now down about 150 feet, and the pull at a windlass to hoist a bucket of dirt to the top is becoming altogether too long.

The Eureka is drifting northward along its ledge. A drift has been run from the shaft westward about forty feet, at which point it struck the ledge. Some very fine looking quartz was taken out there, and a drift was commenced to run along the ledge.

The Crown Point Ravine company is down one hundred feet with its shaft, and has just completed timbering it to the bottom. The work has been driven along quite rapidly since it was commenced, and has also been done in a very workmanlike and substantial manner.

The Milton is a very promising mine. The company is now taking out rich ore.

The Lafayette company has again stopped work. This company has stopped once or twice before, and started again. They have a good claim, and should have better arrangements and management. A company that works its claim a few days, and then lays on its oars a much longer time, changing its base of operations every three months, is seldom successful.

The Green company is working its claim all the time, and will probably be taking out pay rock in a short time. At present a shaft is being sunk from the tunnel to strike the ledge at a greater depth than it has yet been opened. When this is carried down to the ledge the mine will commence yielding again and it is believed more successfully than before.

The workmen are busy on the Mary Ann company's hoisting works, and will have them ready to run in a couple of weeks or thereabouts.

The machinery for the Summit mill arrived in Virginia City, on Saturday last. The work on the mill is being prosecuted with vigor, and it will soon be ready to run.

The New Oregon has commenced operations with its new hoisting works, and now has as good machinery as could be wished, and that which is as powerful as will be required to sink down 500 feet.

The Uncle Sam continues to sink down with its shaft, which has now reached the depth of about 340 feet. The workmen find but little water. The company is now down more than a hundred feet deeper than it was when the ledge was opened and worked before. They will soon be able to put in a large force of drifters and take out an immense quantity of rock.

Land, Skae & Co's mill, which is in course of construction, down the Cañon, will be one of the most extensive in the Territory. It will be driven by a 130-horse power engine. The pans are being put in place, the batteries are completed except the connections with the line shaft, and every branch of work about the mill is in an advanced state towards completion. Everything will be completed and the mill ready to run the last of the month.

The Central Hawkeye continues sinking its shaft which is now down to the depth of about 90 feet. The work is carried ahead very rapidly, and if a hard formation is not struck in going down, the shaft will be sunk to the level of the tunnel below and connecting with it in a very few weeks.

The Buckeye Mine, situated in Devil's Gate district, is now, according to the Virginia *Union*, being vigorously worked. They are at present taking out pay rock that will average from $80 to $100 per ton, and expect to have on hand at the expiration of this month from fifty to seventy-five tons. The vein is two and a half feet thick, and widening as they go down. The greater portion of the hands are occupied in sinking a shaft—but two men being engaged in taking out the pay rock.

ESMERALDA.

Mills.—A correspondent of the Stockton *Independent*, writing from Aurora, under date of Aug. 4th, says:—

"Of old mills and new mills, of mills running, and mills not running, the sum total in Aurora is seventeen. Of these perhaps ten are now in operation. We have previously mentioned the Antelope and Del Monte, which excel the rest in size and finish. The Antelope runs twenty stamps, the Del Monte thirty. The former mill can crush twenty-one tons of quartz per day. We guarantee that the eye of every visitor to these mills, after wandering over the array of pans, tanks, stamps, and other machinery is chiefly attracted by the two crushers, weighing fifteen hundred pounds each, which serve to break the lumps of quartz to the size suitable for the batteries. A big chunk is pitched in the iron grating under the stamps, the mass of iron descends, it is broken into fragments and they fall through the grating into a receptacle below. At times a piece will withstand the first and even second blow, but rarely the third. They rise and fall with monotonous regularity and the unaccustomed beholder is seized with a sort of inclination to get under one of them, akin to the desire which often possesses people to jump from a high precipice. A Newfoundland dog did jump under one of them a few months ago and was rather hastily converted into sausage meat."

The Juniata company have employed the Gregory mill to crush their rock at $20 per ton. The Esmeralda *Union* of the 1st inst says:—

"We had the pleasure yesterday afternoon of examining about eight tons of decomposed quartz taken from the Juniata lead, on Saturday evening, by a force of seven men, and judging from appearance it will yield a handsome profit to shareholders in the claim. We are informed that about one hundred hands will be engaged on the lead within a week. This number will take out at least fifty tons of rock per day, which will keep three of our mills constantly running. The owners in the Juniata are principally hard-working miners, some of whom have spent much time and labor in its development."

Union Mill.—This mill has been thoroughly overhauled and improved, and will run on Juniata rock this week.

REESE RIVER.

The Esther Lode, situated directly within the city of Austin, is now turning out most excellent rock. The results of the first crushing from this lode were very discouraging, and ran the proprietors something in debt. Not at all discouraged, however, and believing that the ore was not properly handled at the mill the proprietors again went to work and took out two tons of first class ore which they hauled to the Pioneer mill, and realized $2,523—a very satisfactory result indeed. Another lot of two tons was next crushed and yielded $3,930. Several hundred dollars were also realized from the sale of specimens. Two tons of second class ore were then tried, which gave $604.77. The ore was taken out by two men, in two months. After deducting all expenses, reckoning labor at $5 per day, the net profits of the operation were $5,600.

The Croesus company's mine lies between Pine and Cedar streets, just outside of the city limits. The lode appears to be the strongest and most regular in that section of the hill. A small quantity of the ore was lately worked which paid at the rate of $404 per ton. There are now some ten or twelve tons of such ore lying at the mouth of the incline, which would evidently pay well for working. The owners of the Croesus are quite poor aside from their claim, but persevere in the development of their mine in a way that will bring the country out of the hard times that now so severely afflict it. Work is still in progress on the incline, which will be sunk to the depth of 125 feet before any more drifting is done.

The Reese River Orizaba company is displaying much persevering energy in opening their mine. The incline is now down 180 feet from which drifts are being run with favorable developments. The lode is two feet in width, the specimens from which, lying on the dump, give evidence of a rich lode. The incline reaches considerably below the water line, and the vein rock taken out is of the usual variety, well filled with sulphurets, and evidently rich. Lodes employed in this character of work: Ophir, six arastras, 30-foot overshot wheel; Ada Elmore, one arastra, 16-foot breast wheel; Confederate Star, one arastra, 20-foot wheel; Alturas, one arastra, 24-foot wheel; Independence, one arastra, 20-foot wheel; and four others are nearly ready for operation, designed for custom work.

The Newton Mine, Amador county, has raised about five hundred tons of copper ore within the past eight weeks and the mine is now looking better than ever before. Over two hundred tons of the above amount is now on its way to Boston.

Advertising Circular.

The Proprietors of the Mining and Scientific Press would call the especial attention of Mining Secretaries, Trustees and Shareholders, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The Press enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the Press is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the Press, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the Press or some other paper.

6th. Many copies of the Press are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the Press, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

Last, but not Least.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the Press shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 56 & 57 Government House, Corner of Washington and Sansome streets, San Francisco.
